Moses is easily the towering personality of the Old Testament. His achievements place him foremost among the wonder workers of Providence. The question, "Whence came his wisdom and power?" is not speculative, but practical. The preparation of Moses for his work illustrates how all patriots may be gotten ready. First he was well-born. Not in the sense that a golden spoon was in his mouth or a silken canopy over his crib. The piety of his parents was a greater endowment than a fat bank account. They recognized that their son was an instrument fit for God's purposes. They risked their lives to save him in spite of the king's commandment. In this they were impelled not by mere natural affection, but by faith they saw in him the deliverer destined to break the galling yoke of bondage and lead God's people from the brick-kilns of Egypt to the highlands of Canaan. In the impressible years in which his own mother was permitted to keep the child he was thoroughly grounded in the thrilling history of the patriarchs and in the high hopes of Israel. He learned the unity, spirituality, and providence of God. He learned also that the Hebrews were not always to be slaves, and that some one was to be their deliverer. He was taught also that it was through Israel that all nations were to be blessed. The boy, Moses, lived in the atmosphere of these glorious hopes. The inspiration of them never left him. When at length he exchanged his mother's cottage for Pharaoh's palace he carried with him the ineffaceable teachings. His mother endowed him with a legacy of heroic thoughts and hopes, which he was certain later to mint into heroic deeds. All unconsciously Egypt herself furnished the education and training of one who was to, later, deprive her of the unrequited toil of her millions of serfs. Moses made spoil of the wisdom and wealth of Egypt. Yet, what he saw and learned only tended by contrast to deepen the lessons of his childhood. Egypt's religion was dark and worthless as compared to that of Israel. Pure ethical ideas and aims of Patriarchs shone in contrast to the sordid ideas and customs of Pharaohs. Soon or late the ideals of Israel and Egypt must clash in Moses' soul. He must needs make the fateful choice—Egypt and royalty! Israel and rags! That is a tal[illegible]manic record. "He chose rather to suffer affliction with the people of God—esteemed reproach of Christ greater riches—had respect to the recompenses of reward!" He had the vision that is indispensable to heroism. Moses' premature move toward emancipation led, under Providence, to the completion of his education. It made flight necessary. The awful solitudes of Midian were educative in themselves. There he had opportunity in the meditative life of the shepherd to review his knowledge of Egypt's language, literature, law, and custom; to consider the vulnerable points in Pharaoh's character and administration, and also to review the strength and weakness of his own countrymen. There also he learned every inch of the Sinaitic Peninsula, from point to point of which he was to lead his emancipated nation for forty years.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

6229 Ladies' Skirt.—This two-piece skirt closes at the front or side, as preferred. It can be made with or without the gathers at the back. Linen, serge or cheviot can be used to make this skirt.

The pattern 6229 is cut in sizes 22 to 30 inches waist measure. Medium size requires 2⅝ yards of 36-inch material. Price of pattern ten cents.

5958 Missies' and Small Women's Dress.—The young girl can make this dress herself without the least difficulty. The closing is made at the left side of the front. The skirt is cut in six gores and can be made with either the empire or regulation waistline.

The pattern 5958 is cut in sizes 14, 16 and 18 years. Medium size requires 4¾ yards of 44-inch material, ⅝ yard of 24-inch satin and ⅜ yard of 18-inch all-over. Price of pattern ten cents.

6235 Girls' Dress.—This dress is made on sacque lines, straight from shoulder to hem. From the shoulders on each side of both front and back a tuck extends down the entire length of the dress. Linen or gingham can be used to make this dress.

The pattern 6235 is cut in sizes 4, 6, 8, 10 and 12 years. Medium size requires 3 yards of 36-inch material. Price of pattern ten cents.

6208 Ladies' Waist.—The decorative appearance of this waist is due entirely to the large collar, which may be omitted if desired. The balance of the blouse is altogether plain. The sleeves may be long or short and plain in finish or with an ornamental cuff. Linen, eponge, summer silk and other wash fabrics are suitable for this waist.

The pattern 6208 is cut in sizes 34 to 42 inches bust measure. Medium size requires 2¾ yards of 36-inch material with 3½ yards of edging and 2¼ yards of frilling. Price of pattern ten cents.

6221 Girls' Dress.—This neat little frock is closed in front and has a three-piece skirt. This is attached beneath a belt to the blouse, which has inset sleeves, seamed on the outside and a round cut neck finished with a band.

The pattern 6221 is cut in sizes 4, 6, 8, 10 and 12 years. Medium size requires 2¼ yards of 36-inch material. Price of pattern ten cents.

ADVERTISING BY EXHIBITION.

To the Editor of The Homestead:

Most live stock breeders and all newspaper men believe it pays to advertise. It is not the purpose of this article to discuss this question in its usual and general acceptation, but in a form of advertising that is often overlooked or not fully appreciated by many stockmen, but which is very effective when well done.

The majority of exhibitors who take their stock to the fairs do so because they expect to win sufficient prizes to pay all expenses. Only a few are so fortunate. The more successful exhibitors, it is true, are paid handsomely by their winnings, some herds returning from the circuit with a surplus above expenses of several thousand dollars. These, however, are the exception. The majority of exhibitors are fortunate if their winnings pay all expenses. But while the winning herds are doing the most effective advertising, yet the men whose cattle may not be quite good enough to draw the coveted ribon have admirers for their cattle and do advertising that results in present or future sales. The good results of this form of advertising may not be immediate, but are realized some months later. So in the exhibition of live stock, owners should not overlook the advertising value of the effort. For this reason, breeders should be ambitious to advertise well and so take to the fairs only animals that are a credit to the owner and to the breed. Unless the exhibitor can show cattle that are creditable, he should leave them in the pasture, for in addition to incurring unnecessary expense, he is advertising the poor quality of his herd.

Some prizes are annually awarded to animals of very ordinary merit at state fairs, especially in state and association special classes, and while superintendents do not like to do it, the interest of the show and the breed would be conserved by barring from exhibition unworthy animals. A prize won on such an animal, through lack of competition, is money dearly earned. The pride of his own success and the welfare of the breed he represents should impel each exhibitor to select choice animals and then bring them forward in nice condition. If he does this, the incidental advertising will justify the effort, though he may not win the ribbon.

Short-horns have done some very commendable advertising at national and international shows in late years, and unquestionably the breed has been greatly benefited. At the American Royal and International shows, the unusual merit and great strength of the breed is annually displayed, and at the Exposition in St. Louis in 1904, and Portland in 1905, Short-horn exhibitors did some very effective advertising. Another most excellent opportunity for this will be afforded by the Panama-Pacific Exposition at San Francisco in 1915. The management of this exposition has been quite liberal to the live stock department, having appropriated $175,000 which no doubt will be supplemented by breed associations; and the superintendent Mr. D. O. Lively, has been very energetic in advertising this exposition both at home and abroad. He has already had numerous inquiries from the Hawaiian Islands and from Central and South American countries about the opportunities for purchasing pure-bred live stock at the exposition. So indications seem good for a strong demand at that big show. There is every reason for believing that this exposition will afford live stock exhibitors an unusual opportunity for exhibiting their stock and selling their surplus. It will be a rare chance to advertise by showing the world what they have produced in the United States. B. O. Cowan.

Eight boys in a country school in McLean county, Illinois, constructed a colored township map of the county in corn. The map shows all the townships, thirty in number, and the cities, villages and railroads, on a scale of three-quarters of an inch to the mile. Nearly a half bushel of corn and ten pounds of putty went into the making of the map. In order to avoid slight differences in shade, only the corn of a single ear was used for each township. The railroads are shown in bloody butcher corn, which is a very dark variety. The label is in pop corn of three colors.

J. C. Price, southern and western Nebraska. Address 145 So. 28th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

W. W. Vaughn, Marion, Iowa, offers Short-horn bulls for sale on page 23. He has the thick-fleshed, beefy kind that make good.

John E. Griffith, Washington, Iowa, can supply the wants of those in need of Aberdeen Angus bulls or females with good breeding. See page 22 and write him your wants.

Yearling Duroc Jersey boars by Volunteer, the international grand champion, can be had of M. S. Pratt, Frederika, Ia., also good spring boars of choice breeding. See page 23.

Hampshire boars that can win in the under-year class at the big shows can be had of Mike Sharp & Sons, Coal Valley, Ill. This veteran breeder knows how to produce the kind that win. See page 23.

The O. I. C. pigs offered by W. Doolittle, Woodlawn, Mo., are now ready to ship and those desiring to take advantage of his proposition to pay express charges should order now. Note page 21 for Mr. Doolittle's advertisement.

W. M. Myers, Beaman, Iowa, can supply good Scotch Short-horn bulls at attractive prices. This herd is one of the good ones. No better bred cattle can be found. The dams of the bulls offered are beefy cows that breed right. See page 23 and write or visit Mr. Myers.

W. H. Cooper, Hedrick, Iowa, sells big-type Poland China boars and gilts and guarantees them to not die from cholera. If they do you get your money back. See page 22 and send him your order. You take no chances. He guarantees them breeders, and you must be satisfied.

George H. Burge, Mt. Vernon, Iowa, well known for many years as a breeder of Short-horns has a few good bulls for sale. He also has a number of good open sale dates to offer those in need of an auctioneer who knows cattle and pedigree. See page 23 and write him your wants.

Some extra choice fall and spring Poland China boars are advertised for sale by F. E. Jackson, Hurley, S. D., on page 22. These boars are bred along the very best big-type lines and they are good. Mr. Jackson can fill your orders for these boars at prices that are within your reach and when you get one you will have the making of a splendid herd boar. Get his prices on these boars at once and also the breeding of the same. Mention The Homestead when writing him.

If you want anything in the Duroc Jersey line get in touch with the Economy Stock Farm, Shenandoah, Ia., at once. They have an interesting advertisement on page 23 that will appeal to the up-to-date and wide-awake breeders of Durocs. They are offering sows bred for September and October litters to their noted grand champion boar, Chief's Col., also twenty fall boars sired by Highland Chief, and two or three outstanding yearling boars that will make great herd boars. Write them at once about what you want and kindly mention The Homestead.

Frank J. Clouss, Barnum, Iowa, in sending copy for advertisement found on page 21 of this issue of The Homestead, writes: "I have certainly enjoyed a good season's trade. I have sold the most bulls I ever sold in the same length of time and am proud to state for the first season I have left the choice bull in Iowa. The calves sired by Ruperta's Goods are now showing up. At present I have six, all of them showing milk with size and good beef forms. The number of bulls is going to be rather small this year, but they are good. I have a number of heifers bred to Ruperta's Goods due to calve in October and November that I will price, also some open heifers. Come and visit the herd. You will be taken to and from the train and do not have to buy; only visit."

Korver Bros., Alton, Iowa, report over 100 head of Poland China spring pigs on hand and some very good ones. These breeders formerly owned Big Wonder, that splendid boar that is now at the head of the Fred Sievers herd, also Iowa King, the boar that J. O. James recently bought in the Peter Mouw sale at $400. This is sufficient to let The Homestead readers know that these breeders are breeding good hogs and the kind the breeders are all after. Their present crop is sired by Mouw Chief, Big Jones Again and Fair Wonder. It is a good place to buy a good boar, and these gentlemen will be pleased to have you call and inspect their herd. They will make a brood sow sale on February 18th, at which time they expect to sell a grand lot of strictly large-type sows.

The writer called on Perry A. Snyder, Davenport, Neb., a short time ago and we were well pleased with the line up of Poland Chinas that Mr. Snyder has to offer. This herd is small as yet, but some excellent individuals are on the farm, and the spring pigs will compare with the best as far as they go, but they are of limited numbers. A yearling herd boar, an extra big fellow of the best blood lines is for sale. Also about ten boars of early spring farrow are offered. The yearling boar is Returner Wonder by Pud's Wonder by A Wonder. The writer never saw Pud's Wonder, but he has repeatedly been recommended as one of the extra good A Wonder boars of the country. Returner Wonder is an extra big yearling, and shows the type of the big ones. He is also a good sire, having sired a lot of stuff for Mr. Snyder, but as the herd is so small, being only six or eight sows, he cannot keep this boar to use longer, his herd already being full of this breeding. This boar is the sort that would cost well over $100 if he was in the hands of an old breeder, but he can be bought at a price from Mr. Snyder that makes him a real bargain. Write Mr. Snyder for prices at once, and mention The Homestead when doing so.

G. J. Bloemendaal, Alton, Iowa, one of the best of the younger breeders of large-type Poland Chinas in the northwest, has seventy-five spring pigs on hand and they are sired by Big Black Jumbo, Gersdale Wonder, Big Wonder and Big Orange. He has some very good pigs among these and some that has every right to make splendid herd boars when grown out. Mr. Bloemendaal will be pleased to have intending boar buyers drop in and see his herd and he thinks he can fit them out with a good boar. He will make a brood sow sale on February 18th, when he again expects to put up an offering that the breeders will all be after.

Windom Offers Fall Boars.

If you want a right good Poland China fall boar don't overlook A. H. Windom, Nodaway, Iowa. He is offering several by the 950-pound Pawnee Nelson, and these are strictly choice. We have seen these boars and we know whereof we speak when we say these boars are strictly all right. You cannot do better than to go and see these boars or send Mr. Windom your order direct. These boars are right and so are his prices. When writing him kindly mention The Homestead.

Malcolm's Durocs.

That old veteran breeder, Wm. Malcolm, Worthington, Minn., is still in the hog business and have over 100 spring pigs on the place. Wm. Malcolm bred Durocs when many of our present-day breeders were in their swaddling clothes, and in his time has bred and raised some good ones. He has not forgotten how to do it even yet, and has some good pigs on the place which he expects to sell later in the fall. When any of our readers get in his neck of the woods make it a point to visit his herd. You will find him to be one of nature's gentlemen, a good breeder, and a man whom it is a pleasure to meet.

Bly's Durocs and Short-horns.

We recently called upon T. E. Bly, Brewster, Minn., one of the oldest breeders of Duroc Jerseys and Short-horns in southern Minnesota and found him just as busy as he was years ago when we first knew him. He has 130 head of spring pigs and he is carrying them along in good shape. These are sired by Buddy's Improver, Model Chief, Jr., Crimson Model and a few out of sows he purchased at the sales last winter. Mr. Bly will have a nice string of boars for sale the coming fall and he will make a brood sow sale in early January. He will also make a Short-horn sale following the hog sale and he will sell some fifty or sixty head of cattle in this sale.

Bargains in Short-horn Bulls.

Right good Short-horn bulls of good breeding are being offered at farmers' prices by B. F. Mason, Seward, Neb. These bulls are from big stock, of the most fashionable breeding and while they have only had good farm care, they are just in the right shape to go out and do a lot of hard service. They will be placed on board the cars at from $75 to $100. The would weigh the biggest part of the price right over the scales and remember that they are recorded and all right in every way. A couple of very dark roans and the others are good reds. Mr. Mason also has some good Duroc Jersey bred sows to offer and some extra choice spring boars. These boars will go at $20 if ordered within the month. They are also of the best of breeding and are really splendid individuals. Mention The Homestead and address as above at once.

Dunbar's Chester White Boars.

The man that is going to want a good Chester White boar pig should read the advertisement of W. H. Dunbar, Jefferson, Iowa, and get in touch with him at once. He will not make a sale this fall and he will therefore close out his entire crop of boars at private treaty. Mr. Dunbar's show record is so well and favorably known to readers of this paper that it seems unnecessary to mention it at this time and for fear that someone may not know about it we will say that he has shown at all of the leading state fairs in competition with the greatest herds in the land and he always got his share of the ribbons. The boars that he is now offering are from his most noted prize-winning show stock. Now is the time to get a good pig and if you will only write him you will be able to get in before they are picked over. Kindly mention The Homestead when corresponding with him.

Gruis' Duroc Jerseys.

One of the younger Duroc Jersey breeders that we wish to introduce to The Homestead readers is Mr. Heiko Gruis, George, Iowa, who comes before the public this year with 115 head of good spring pigs. Eight litters of these are sired by his splendid yearling boar, A Wonder, Jr., one of the best young boars today in northwest Iowa. He is a son of A Wonder, the boar that heads Mr. Veenker's herd and he is out of a West bred dam. He is a hog of splendid size, good bone, plenty of length, smooth in his coat, and is a boar that would be a credit to any of the larger and more noted herds. This hog is making good as a breeder and he has a lot of splendid pigs by him on the place. He also has one litter by old A Wonder, two litters by Fancy Chief, one litter by Model Chief, Jr., two litters by Cloverdale Prince and one litter by G. S. Crimson Wonder. Mr. Gruis has a splendid lot of boar pigs now on the place and he will be pleased to have intending buyers call and inspect them or he will book orders for them from now on at from $25 to $30. As he is just coming before the public he says he is going to make the price on these boars where they will sell and he says the first come will be the first served. His advertisement will appear regularly in The Homestead a little later in the season.

Saunders' Short-horn Bulls.

On page 23 C. A. Saunders, Manilla, Iowa, is offering some good young Short-horn bulls for sale, and he has a number that are good enough to head the best of herds. He will be pleased to have The Homstead readers call and inspect these bulls before they are all gone. When writing him kindly mention this paper.

Chester White Boars.

On page 21 G. H. Tutt, Marathon, Iowa, is advertising his two splendid herd boars for sale and forty head of spring boars. He certainly is offering good bargains, both in these herd boars and in the spring boars. We have seen them and we know they are bargains. Write Mr. Tutt about these at once and kindly mention The Homestead.

Some Choice Short-horn Bulls.

Readers of The Homestead that are in need of a good Short-horn bull of serviceable age will do well to write C. McCarthy, York, Neb., for prices and description of those that he has for sale. He has a couple that are old enough for pretty hard use, and they will be sold at prices that are mighty attractive if taken at once. Kindly write Mr. McCarthy at once and when doing so mention The Homestead.

James Still Offering Bargains.

Don't overlook those special bargains that J. O. James, Braddyville, Iowa, is offering in Poland China spring boars. He has some outstanding boar pigs sired by some of the most noted boars in the West and as he will not make a fall sale he has decided to close these boar pigs out at private treaty. You can buy a $75 boar now for $25 to $35, and if you want to get in before the prices go up you will order him to send you a pig at once. When writing him kindly mention The Homestead. See advertisement on page 22.

Dripps Polands.

Twenty good, big-type fall Poland China boars are for sale by John I. Dripps, Springville, Iowa. They are sired by Pawnee Expansion by Big Ex and R. & C.'s Pawnee Lad. The dams are Pawnee Giantess by R. & C.'s Pawnee Lad, Price's Expansion, Lady Expansion, Pride's Expansion and Expansion Model, all sired by Big Ex, Monarch Chiefess by Gay Monarch and others. The spring pigs offered are by the two herd boars and out of the same sows as the fall boars. If you want a good boar at a reasonable price see page 22 and write Mr. Dripps mentioning The Homestead.

Choice Hereford Bulls.

Those of our readers who are going to want a good young Hereford bull should lose no time in seeing A. Spooner & Son, Mondamin, Iowa, whose advertisement appears on page 22. They have fifty splendid young bulls that they are offering for sale and you cannot do better than to buy one from them. In fact, they have the best bunch of bulls we know of at the present time and you can easily select a bull from their herd that will be good enough to head any herd in the West. They can fill your order for one or for a car load. The breeding and the individual merit of these bulls they are offering for sale is the very best and you will find their prices are right considering the individual merit and the breeding. Write them at once or go and see the bulls they are offering for sale. Kindly mention The Homestead when writing them.

Wegter's Duroc Jerseys.

One of the younger breeders of Duroc Jerseys in northwest Iowa is Henry Wegter, Sheldon, Iowa, and he has seventy head of spring pigs on his place, together with seven head of good fall boars. These fall boars he will sell at any time and he has some good ones among the bunch. They are sired by Big Wonder, a Phallas bred boar and he also has a very fancy fellow by Crimson Climax. There are some good boars among these and he is pricing them where they will sell and they are well worth what he is asking for them. His spring pigs are sired by Happy Secret, Model Chief I Am, Put's Top Col., Chief Model and Crimson Improver. He will make a brood sow sale on January 24th at which time he expects to get together one of the best offerings that he has ever sold since he has been in the business. In the meantime he will be glad to hear from anybody who wants a good fall boar or he will book your order for a spring pig.

Pioneer Stud Farm's New Importation.

John G. Truman, Bushnell, Illinois, writes: "Our regular June importation of Shire and Percheron stallions and mares arrived June 26th in first-class condition, and it is without doubt one of the most select lot of horses we have ever imported. My father assisted by my brothers have scoured England and France for the sole purpose of buying the very best specimens they could find, and in no instance have they left a high-class horse when they had an opportunity to buy him. The Shire stallions run from two to four years old and the Shire mares from four to eleven years. Among the latter being the grand mare, Tatton Aurora, one of the very best Shire mares ever shipped from England and of the same stamp as the noted Wrydelands Sunshine, an international champion. The Percheron stallions are all two year olds, they are the best lot we ever owned and have more bone and rugged draft horse quality than any lot I have seen. They were all purchased by my brother, H. H. Truman, in January last, when he scoured the Perche for the best he could find. The balance of our Percheron colts are now being shown at the leading shows of France and will come in our regular July importation. A yearling filly sired by Intitule is a wonder and only adds to the laurels of this grand horse as one of the greatest breeders the breed

has ever known. Included in the lot is one of the best dappled gray Percheron mares I have seen, much after the same stamp as the great mare, Hysope, that we won grand championship with at international last year. My father thinks she is in many respects a better mare than Hysope. This importation about fills our stables and we will make attractive prices for the next few weeks in order to make room for the Shire, Percheron and Belgian horses that will arrive in our next shipment."

Naiman's Poland Chinas.

J. L. Naiman, Alexandria, Neb., has saved a great crop of Poland China pigs this spring. He has well up to the hundred mark, and by odds the best lot that he has ever raised. They are principally the get of Naiman's Expansion by Expansion Over by old Expansion. They are out of good sows, many being direct from the Walker & Son's herd. In another issue of this paper will be a photo of the young boars now for sale from this herd. Mr. Naiman will price these good spring boars at such a figure that will make them positive bargains if taken soon. Readers of this paper should write immediately. When writing kindly mention this paper and watch for notices in following issues.

Mills' Hampshires.

On November 3d, A. G. Milis, Spencer, Iowa, will make his first public sale of Hampshire hogs and he will offer fifty head, the pick of his entire bunch. Mr. Mills has been breeding Hampshires for a few years and now has a splendid herd. His foundation was secured from the very best herds and he has eighty-five head of good spring pigs and they are coming along in fine shape. He expects to sell twenty-five or thirty boars in the sale, five brood sows and the rest will be gilts. He will sell fifty head altogether and it promises to be one of the best Hampshire sales that has ever been held in the northern part of the state. Homestead readers who want to be sure that they will receive a catalog of this sale should drop Mr. Mills a postal card requesting him to send you his catalog when it is out and you will be sure then to get it. When asking for it kindly mention The Homestead.

Fain's Duroc Jerseys.

The other day we called upon F. E. Fain, Emmetsburg, Iowa, and found him with fifty Duroc Jersey spring pigs and while the crop was not large with him, he nevertheless had some splendid pigs. He said he was not feeding these pigs and all they were getting was a little fresh air and a lot of grass and water, but from the looks of them he must have injected a little more nutriment into these essentials than the average man does. He has ten head of good fall boars on the place and these are all sired by Fain's Select, a good son of Chief Select, that stands at the head of his herd. His spring crop is sired by Fain's Select and Missouri Model Top, Jr., the latter being a son of old Missouri Model Top, that formerly headed the Shade herd, Kingsley, Iowa. He has some pigs that are sired by Golden Model 2d, Big Chief, Chief's Model and a son of old Chief's Col. Just now he is offering some good fall boars for sale and he has some that are good and are well worth what he is asking for them. Write him about these and kindly mention The Homestead.

Browning's Durocs.

H. E. Browning, Hersman, Illinois, as usual will have out a strong show herd this year. At the head of the show and breeding herd is Disturber, a son of Defender and out of Lucy Wonder 112 by Chief's Col. Disturber, weighs 850 pounds now and can easily carry 150 to 200 pounds more. He has a strong arched back, a good set of feet and legs and with it all is as smooth as an apple. Disturber has been rated by several good judges who have seen him recently, as the best Duroc Jersey boar they have ever seen. There is no question but what he is the best boar Mr. Browning ever owned and he has owned some good ones. As a sire he has made good. Mr. Browning has some good pigs by him and S. E. Eakle has a fine lot of fall boars and sows sired by Disturber. Big-type Durocs have always been popular and they will continue to be. When you get a boar that has the quality and size combined as has Disturber they need nothing more to recommend them. Mr. Browning has a fine lot of sows to show in the different classes and it will be of interest to every Duroc breeder to see this exhibit at the different fairs.

Show-Yard Durocs.

C. McCarthy, York, Neb., the well-known breeder and exhibitor of Duroc Jerseys will not show this fall and for that reason will offer a junior yearling boar and a senior yearling sow that should be picked up by someone wishing to fill out their herds. The junior yearling is sired by Queen's Crimson, a boar owned by Briggs & Sons, and he will also be shown this year. He is the right kind of a breeder as this boar will show. This young boar is really an extra good proposition. He comes of a great line of winners on his dam's side, being out of Garnet's Lady by Lincoln Wonder. Her dam was Garnet's Pride a first-prize winner at Lincoln a few years ago. Garnet's Lady won third at Lincoln a year or two ago. This boar is just the sort to head a high-class herd, or he will do nicely for the fall fairs, and in either case the price that is being asked for him will make him a decided bargain for that class of a hog. A senior year sow that is also a good proposition can be had, and she will also be sold worth the money. A couple of good Short-horn bulls are also for sale and they come of some of the best breeding stock in the country. If in need of any of this kind of stock write at once and when doing so, mention The Homestead. Address C. McCarthy, R. D. 5, York, Neb.

Poland China Bargains.

On page 22 Mr. George Glynn, Sioux Rapids, Iowa, is offering some splendid bargains in Poland China boars and a few choice sows bred for fall litters. These sows are just as good as you can buy anywhere, and they are bred in the strictly large-type strains. Another feature of this is that they are bred to his splendid herd boar, Mouw's Big Sioux, a hog that weighs 900 pounds. Mr. Glynn has more sows than he cares to keep in the herd and he is therefore making some special bargains on these in order to make room. No man will go wrong on ordering some of these sows from Mr. Glynn. He is offering a splendid herd boar for sale in Smooth Jumbo. He is a two year old and a good one and some man is going to get a bargain in him. He also has a number of very good fall boars and will book orders for spring boars. He will be pleased to have you write him about anything you want in his herd or he would rather that you go direct to the farm and make your own selections. When writing him kindly mention The Homestead.

Veenker's Duroc Jerseys.

One of the good Duroc Jersey herds in northwest Iowa is owned by R. C. Veenker, George, Iowa, and he has something over 100 spring pigs that are good to look at. Mr. Veenker's herd is one of the best known herds in that section of the state and he is going to the fairs this fall with some that the breeders will all look at. He owns that good boar, A Wonder, a grandson of the old Minnesota State Fair winner, Dale, and he is out of a daughter of that other well-known boar, Sioux Chief. He has a yearling boar called Model Chief, Jr., a son of old Model Chief 2d, and he is also a splendid boar, and he has some good pigs by both of these hogs. He has an excellent litter by Happy Secret, and this litter is out of the top gilt in the Deval sale last winter. This is a splendid litter and we have not seen very many better ones so far this season. Mr. Veenker has another yearling boar by Model Chief 2d, and he is a good boar. He is offering those hogs for sale and he is a bargain for some man who is looking for a herd boar. Mr. Veenker expects to be at the Sioux City Fair with a good bunch of hogs and he wants to meet all the breeders there and he will take pleasure in showing them what he has.

Economy Farm Durocs.

The man that is going to want a good Duroc Jersey boar should lose no time in going to see the Economy Farm Durocs, Shenandoah, Iowa, owned by James J. Doty, and managed by that well-known breeder and judge, Mel Kraschel. They have 200 spring pigs on hand and they also have twenty head of good fall boars on hand that are ready to go at any time. They have some splendid herd boar propositions that they are now offering and the breeder that is going to want one of these should go and see them without delay. Their spring pigs are sired by that noted show and breeding boar, Chief's Col., a boar that has few equals in his day as a show and a breeding boar. Then they have some good ones by Highland Chief, an unusually good breeding boar and, by the way, they are offering this boar for sale and he is a pick up to some breeder who is going to want a boar to place at the head of their herd. They have other litters by the great and only, Colonel Gano, and the well-known Cherry King. They are booking orders for these at any time from now on and they will be pleased to hear from The Homestead readers or they would rather that you call and inspect the herd. If you cannot do this write them your wants and Mr. Kraschel will select the pig for you and we know you will be satisfied with the selection. When writing them kindly mention The Homestead.

Hassler's Poland Chinas.

One of the good young herds of Poland Chinas that is rapidly coming to the front is owned by F. H. Hassler, Manning, Iowa, and he will make a fall sale on November 1st. Mr. Hassler has been a very discriminating buyer of the very best the past few years and he is getting to that point where he has a herd that the breeders will be interested in. The boar at the head of his herd is Fashion Chief 63596, a son of that noted show and breeding boar, Chief Price Again. His dam is Long Lady by Longfellow 2d and his second dam is by the 900-pound Long Chief that for years headed the good herd of Frank Long at that place. This boar was brought out last year and without any fitting made many friends among the breeders who assembled at the Iowa State Fair. He has come along in excellent shape this season and those who have seen him admit that he is a far better boar than he was last year. Quite a few of the pigs in the herd this season are sired by this boar and he has some good ones. As we said above he has been a very discriminating buyer of sows and among the good ones he now has in his herd is Escher's Standard, a daughter of Chief Price 2d, and she is a good one. She was the best sow in the Ed Escher herd and he in turn purchased her from him in his closing out sale. Mr. Escher had many very tempting offers to sell this sow, but he would never consent to let her go until he finally closed out everything. She is an unusually large sow and you will travel many a day before you will see one as large as her. He also has a number of daughters of Fred Siever's Big Wonder, two daughters of that celebrated boar, Big Orphan, and others by Big Bone, Big Halver, Mable's Wonder and A Wonder A. If nothing goes wrong with his herd you will find him one of these days with one of the best young herds of Poland Chinas in the state. Later in the season we will tell you about some of the good things he will sell in his November sale.

Corn Harvesting, The Easiest Way.

The farmer who appreciates the value of an inexpensive design that will save time and labor, will be interested in the advertisement of the Love Manufacturing Company, of Lincoln, Illinois, on page 5 of this issue. The "Perfect" Corn Harvester has cut from four to six acres a day, with one man and one horse. Ease of operation; simplicity of construction, with all possible danger removed; an absolute guaranty and the elimination of the middleman's profit by their "factory-to farmer" plan; these are just a few of the points that make the "Perfect" Corn Harvester a machine that no corn-raising farmer can afford to be without. Mention this paper when writing.

Kreb's Durocs.

John Krebs, Riverside, Iowa, is breeding a type of Duroc Jerseys that are popular. He has given special attention to size and smoothness. His herd boar, Joe's Col., is a large boar by Proud Col., a boar known for the size of his sons and daughters. The dam of Joe's Col. is by Model Wonder, the great breeding boar owned by Hanks & Bishop. Mr. Krebs has about 100 pigs sired by Joe's Col. and they are as big and smooth and as heavy boned as you will find anywhere. He has two good litters by Wonder's Model, the good son of Model Wonder, that won second at the Iowa State Fair last year. He also has a litter by I Am A Crimson Wonder 2d and out of a Col. Gano gilt that topped the Swan & Ellis sale last winter. We know Mr. Krebs can please you in a good boar pig at a very reasonable price. Write him or pay him a visit and see for yourself. When writing kindly mention The Homestead.

A Nebraska Farm Bargain.

One of the nicest Nebraska stock and grain farms of the country is being offered for sale just now by the owner, O. C. Cowel, Hebron, Neb. This farm contains 160 acres, and lies right at the edge of town. Hebron is the county seat of Thayer county and is a good live city of 2,000 or more. It has very fine churches and is noted for its schools. It has nice parks, and in fact is a modern progressive city. This farm has eighty acres of alfalfa, all fenced and cross fenced, and as this is right in the heart of the alfalfa belt, it is not a hard crop to grow, and more could easily be seeded. There is a good lot of buildings and other improvements on the place, in fact, this is a very fine farm and is being priced well worth the money. There is a new barn, good cattle sheds, hog houses and all other outbuildings. The writer has often been on this farm, and we would recommend this to anyone looking for a good farm in a good location. Hebron has two railroads, the Rock Island and the Burlington. Liberal terms are being made on this place and we would like to see this farm go into the hands of good parties. Mention The Homestead and write Mr. Cowel at once.

Kreischer's Poland Chinas.

A fine lot of big-type Poland China boars are offered for sale by E. W. Kreischer, Mt. Vernon, Iowa. He has twenty fall boars sired by the 1,000-pound Mastodon Chief and Tecumseh Prince and two yearlings sired by Mastodon Chief. These boars have the size, heavy bone and smoothness that breeders and farmers admire. Their dams are largely by Tecumseh Prince, Monarch Price and others of note. There are also some mighty good spring pigs sired by Mastodon Chief, Big Jumbo 2d, a son of the noted Big Jumbo and Mastodon Wonder by Mastodon Chief and out of Smooth Lady by A Wonder. The breeding in this herd is as good as the best and the hogs are good. If you want a good boar write Mr. Kreischer your wants. Mr. Kreischer's Herefords are coming along nicely. At the present time he has three young bulls for sale. One of them is a herd bull proposition, being sired by the show bull, Young Albany, and out of the show cow, Spray by Distributer by Disturber. This is a show calf and good enough to head any herd. There is another good bull sired by Dale's Eclipse. See the advertisement on page 22 and mention The Homestead when writing.

Stewart's Chester Whites.

One of the best bunches of Chester White spring pigs that we have seen in our travels this spring is owned by J. H. Stewart, Dickens, Iowa, who also owns one of the best herds in the northern part of the state. He has 175 head of these and they are coming along in fine shape. If they continue to improve from now on until September and October, the same as they have up until this time, you can put it down that he is going to have some that will make herd headers. These are mostly sired by Iowa Boy and Crescent, two boars that he has been using at the head of his herd. He still has Iowa Boy, and he is a good individual and a good breeding hog. This boar is a son of Fancy Boy, the boar that stands at the head of the herd of John Holst, Jr., Denison, Iowa, and he in turn is a son of L. C. Reese's celebrated old show and breeding boar, Kepp On. He comes from a line of breeding that has produced some of the very best we have in Chester Whites, and from the looks of the pigs in Mr. Stewart's herd this boar is going right on in producing good things. His other boar, Crescent, was purchased from Hoover, Oskaloosa, and he is a son of of his well-known boar, Wonder, and he also has some good pigs by him. Mr. Stewart will book orders for spring boars from now on and we will say to The Homestead readers who want to get in on the ground floor that now is a good time to place your order. These boars have not as yet been picked over, and he will make your selection now and ship later in the season if you want it that way. Write Mr. Stewart about his boar pigs and when corresponding with him kindly mention The Homestead.

F. H. Dickey's Duroc Jerseys.

Among the many good Duroc Jersey breeders who have a good crop of pigs this year is F. H. Dickey, Emmetsburg, Iowa, and he has ninety-five of them that are coming along in splendid shape. He also has eight head of good fall boars, all sired by Col.'s King and some of these will make splendid herd boars. One of these is out of a sow bought from the Roycroft Farms, and he is a good one and will eventually round out into an excellent herd boar. The spring pigs are sired by Col.'s King, a son of King of Col.'s, a boar used with success in his herd. Others are sired by Royal Col., a son of the champion boar, Freed's Col., that he is now using, while others are sired by Gold Col. (a son of old Prince of Cols., D.'s Crimson Wonder I Am, and D.'s Crimson Critic. Mr. Dickey's pigs are doing well and are looking fine, and it is a good place for breeders and farmers to go to buy a boar. We have seen few hog farms that are kept in better condition than the Dickey farm and this in a measure has much to do with the healthfulness of his Duroc Jerseys. Mr. Dickey also has a nice herd of Guernseys started, but at the present time he is not offering any of these for sale Homestead readers who want a good fall boar will find some good ones in this herd and it will pay them to write Mr Dickey or call on him and make their own selection

North & Robinson Import.

A recent letter from W. C. Robinson, of the firm of North & Robinson, the well-known breeders and importers of high-class draft horses, states that a new importation is on the way and will arrive at the company's barns at Grand Island, Neb., in the fore part of July. These horses were selected personally by Mr. Robinson, one of the good judges of America, and those interested in the good ones will keep this importation in mind, for it is a safe venture that that class of stock will be found in this shipment. Messrs. North & Robinson have one of the finest stock ranches in the entire country, in fact, they have ideal equipment for the handling of their trade. They have a large ranch at Bridgeport, Neb., on which farm there is an abundance of native pasture, also a fine lot of irrigated land. At Cairo, Neb., they have another very fine farm, practically in the famous Wood River valley and at Grand Island they have commodious and comfortable stables and sales yards. Grand Island is one of the greatest horse markets in the country, and men come from all parts of the United States to this point for their purchases. North & Robinson are doing a big business and while they import many horses, yet they are raising a class of stock equal to the very best imported, and the home-bred ones can usually be had for a little less money than the imported ones. A home-bred mare in the last sale made by these gentlemen sold for $1,560 and was purchased by a stockman that has been a buyer from this firm for several years. Prices of this sort indicate that good ones are grown by this firm. Readers of The Homestead contemplating the purchase of some choice ones will do well to visit this firm immediately. Should you write, mention This paper.

Coleman Bros., Poland Chinas.

It was a pleasant time the writer spent at the farm home of Coleman Bros., Ithaca, Neb., a short time ago, and we were much interested in their farm management as well as their high-class herd of Poland Chinas, and they also breed Short-horns. This Poland China herd is just one of the good ones of the state, and their business training in banking business and progressive farming gives these young men a decided advantage over other stockmen, not so well equipped. They have high ideals as to honor and their splendid method of treating the buying public is certainly bringing its reward in increased sales. The crop of spring pigs is the best this firm has ever raised and they are of something of the same breeding as was used a year ago. Osbon's Hadley was a sire used in this herd for some time and with remarkable results. He was by Big Hadley and out of a daughter of Big Hutch. This is practically the same as the Epley boar that has been breeding so well and was a prize winner at the fair a couple years ago. Osbon's Hadley has been a valuable boar for this herd, and several good breeders wished to purchase him, but he was never priced. These gentlemen had the misfortune to lose him a short time ago. Excellent Wonder by A Wonder is as good a son of the old boar as we have ever seen, bar one. He is not quite as large as we would like to see him, weighing about 725 in his two-year-old form in breeding condition, but he will reach 900 if nothing befalls him and that is pretty big after all. As a breeder he is surely all that could be wished. Twenty-five fall gilts on the farm by him are as good as we have seen in many a day. Every one of the same type and the big stretchy kind at that. They will be sold in Coleman Bros. winter sale and they should make the sale one of the very best in Nebraska. A young boar by Wade's Jumbo has been used quite a little and he breeds the characteristic heavy bone of this strain. It is hard to get around this Wade's Jumbo stuff for bone and stretch. These gentlemen may make a fall sale and if so further announcement will be made in The Homestead. Readers who are interested will kindly watch these

columns. In the meantime those in need of a good yearling boar will be able to buy one here worth the money. Some choice spring boars might be spared.

Walker & Son's Poland Chinas.

To make a complete success of any enterprise is a source of much satisfaction to those that put forth great effort, and it certainly should be a comfort to Thos. F. Walker, Alexandria, Neb., the senior member of the firm of Walker & Son, of that place, the noted Poland China breeders to look back over the years that he has been engaged in the production of pure-bred Poland Chinas and note the progress made. From this herd has sprung new herds by the score. Some of them have progressed into real good herds and others have flourished only so long as the owner kept steadily to the proper route and his original breeding stock lasted, but in every case a permanent good has resulted for the breed of pork hogs of the country, and that is the end of all of them. Herds of well-known character have been strengthened and materially aided by drafts of new breeding stock drawn from this herd. Prize winners at the fairs and prize sires have gone out from this herd in great numbers, and we have a right to look forward to still greater things from this good herd. These gentlemen have all their past experience to guide them in their efforts in the future and mistakes that have been costly will be avoided. Two great boars now head the herd, and their get are of great promise. They are Blue Valley and Blue Valley's Orange. The former is a son of the great Blue Valley Quality and the other is a son of the famous Big Orange and was one of the highest-priced boars sold at auction last fall. Blue Valley is one of the greatest individuals of the big boars within the state, and as he has been used some time, his get are not an experiment, but much of the nature of a certainty. Blue Valley's Orange is but a junior yearling and his first crop of pigs are now in the hands of the western stockmen. Those on Walker & Son's farm show up fine, and they certainly should. A fall sale will be made from this herd this fall. The sale will be held in Fairbury, Neb., and the date is October 17th. Do not forget it, but plan to be on hand.

C. P. Paulsen's Hampshires.

One of the most noted herds of Hampshires in Nebraska or in fact in the country is the one owned by C. P. Paulsen, Nora, Neb. Mr. Paulsen is a progressive sort of a stockman. He was quick to realize the possibilities of the Hampshire breed of hogs, and in making his initial purchases bought only the very best offered for sale. He was the first man to pay $200 for a Hampshire sow in this country, and he has in many other sales bought higher-priced ones since, and at private trade he has bought still others of the very select. His foundation material was drawn from such herds as those owned by Hugh Atkinson, Clayton Messenger, H. D. De Kalb, Sharp & Son, Essig Bros., and many others of the better known breeders. Buying the very tops of these herds, or at any rate the very best that they would sell has given Mr. Paulsen the very best sort of foundation for a herd that could be imagined. That his hogs are appreciated by the best class of buyers was shown very clearly in the public sale held by Mr. Paulsen last winter. At that time 100 head of sows and gilts were sold at an average of $56.25 and practically every animal went to breeders. They were shipped to several states and to numerous good herds. Boars from a herd of this kind should meet with ready approval by those in search of the good ones and an opportunity to purchase will be given on October 10th, at which time Mr. Paulsen will sell sixty-five at auction in the sale pavilion in Fremont, Neb. Keep this sale in mind, and remember that if it is the best of breeding, from the best of breeding stock that will interest you, that this sale should be attended. See advertisement on page 23.

Union Stock Yards, July 5th, Chicago, Ill.—Cattle trade closed the week in prostrate condition at prices 40 to 60c per hundredweight lower than at the middle of June, while the hog market fairly boomed, having advanced half a dollar, while cattle trade has been sliding down hill as though everything was lubricated for the event. Explanation is not difficult; there is competition in the hog market, but none where cattle are concerned. Stock and salesmen tell the story of four or five bids at the same figure on the same cattle while no two bids on hogs are alike. "Once I thought I was a cattle salesman; today I take what buyers tell me they are willing to pay and hold my peace," said a veteran trader. Everybody appears to want hogs, but cattle have few friends and the better they are the more deplorable is their market condition. The recent advance in corn has increased cost of feeding, while the market has been slipping away every day and tired holders are liquidating. Killers say they cannot sell beef, which may be a plausible excuse for present unsatisfactory market conditions. The logic of the situation so far as the farmer is concerned is plain. He should quit beef and raise pork. Probably he would adopt that apparently sane policy if nature had not imposed a handicap on increased pork production by disease, which baffiles veterinary science and is mainly responsible for current scarcity.

Cattle trade is on a weather basis and if high temperatures continue supply must be light unless further demoralization is to be recorded. The market closed the week slumpy at 15 to 25c declines, with symptoms of going still lower. The limit on the best grade of steers ever made is $8.85 and a spread of $7.80 to $8.40 is taking the bulk. This gap is unseasonably and unreasonably narrow. There is no logic in hanging up good beef in coolers at 12½c, while trash costs 12c. Steers now selling at $8.50 on the hoof and few are able to beat that price cost 12½c in the carcass, while $7.75 cattle figure 12c. The time for a different basis of valuation has arrived and a widening spread is to be expected unless the public has decided to cease eating good beef entirely. Recent advances in wholesale and retail cost were inexcusable if the live cattle market is to be accepted as a criterion. Beef consumption has been reduced to the smallest volume during the past twenty-five years and this is what is hurting the cattle market.

This week has cleaned up practically all the Pennsylanvania cattle and Kentucky sloppers have disappeared, but Indiana and Illinois slop-feeders still have a lot of steers back. They will endeavor to sell them out during July. The distillery delegation is closing the week on an $8.15 to $8.30 basis. Quarantine cattle have been running freely this week, Fort Worth, Kansas City and St. Louis being liberally supplied with steers from the ticky area and they must be reckoned with in debating on the why and wherefore of the market. At Fort Work killers have been getting thousands of 5½ to 6c steers and similar goods have sold at 5¾ to 6¼c at Kansas City. Timely rains have restained liquidation in the parched sections of Indiana and Illinois, consequently fewer common cattle have showed up. The menace of liquidation in the Southwest has been renewed by generous humidity which has revived grass and provided stock water which was getting scarce in many sections.

STEERS.

Good to prime vealers	10.25@11.00

Hay trade has done another good stunt this week. Supply has been moderate and shipping demand has come stronger, which means that before long eastern killers will be forced to buy more hogs at Chicago and the market will have the benefit of competition. The 9c hog has placed a return engagement, the market closing on an $8.75 to $8.95 basis. Between choice light and heavy hogs there is a narrow spread of 15c, but the gap between quality and mediocrity is widening, owing to an increasing proportion of packing stuff in the run. Demand centers on 180 to 225-pound hogs of shipping quality, while big "packers" weighing 300 pounds and up are discriminated against and selling from $8.50 down. Prediction is made that by the end of July there will be a dollar spread between prime shippers and heavy packers. That June uncovered the summer low spot is now evident and as eastern demand broadens, competition will accentuate. Cheap hogs are impossible during the coming summer in the opinion of most people in the trade and the "wise guys" coincide in this view.

Bulk of sales	$8.80@9.00
Mixed, 210 to 250 lbs.	8.80@8.95

Government throwouts	4.25@6.75
Government pigs	2.50@4.00

Live mutton trade may get a regular stride in the near future. Certainly it needs steadying. For weeks past declines and advances of 50c to $1.50 per hundredweight have followed in rapid neccession. Keeping both market talent and country shippers guessing. Early in the week declines of 50 to 75c were registered, but the break shut off supply and 50c reaction followed. At the close lambs sold at $7.75, with the bulk at $7.75 to $7.50, with lax sorting and ewe trade was on a $4.00 to $4.50 basis, revival of demand for breeding stock having exerted a healthy influence. Sheep are quotable to $5.15, but few are good enough to make $5.00. The western range season has been inaugurated $7.25 to $7.75 buying the initial week's run of Idaho lambs, with Oregon sheep at $4.65 to $4.95. Kentucky stuff has been running heavily and packers have bought thousands of lambs at the Ohio river at $7.00 to $7.25, average cost of the week's purchases being $7.15. There is good demand for feeders the first Idaho lambs of the season to find the country outlet selling at $6.50.

IOWA WEATHER AND CROP BULLETIN.

The following climate and crop bulletin is issued by the Iowa Weather and Crop service from the central station at Des Moines, for the week ending July 6, 1913:

Another week of hot weather, with local showers over the larger part of the state, has brought corn fully up to the average for the season of the year. The fields are clean; the plants are strong and vigorous and of good color, and are knee to waist high. The average temperature was about 5 degrees above the normal, but the rainfall was deficient except in a few localities in the northern counties, where heavy local showers, accompanied by high winds and some hail, occurred. Over a large area in the southern part of the state there was no rainfall. The weather as a whole was exceptionally favorable for haying and harvesting. Much clover hay was put up in fine condition, and probably half of the winter wheat and rye is in shock in southern sections. Oats and barley have improved during the last ten days and are filling well, although the oats straw is shorter than usual. Pastures, potatoes and gardens continue in good condition, but rain would be beneficial, and in some localities is badly needed. Hog cholera is again appearing in some of the western counties.

A summary of the July 1st crop reports show the average condition of crops to be as follows: Corn, 93 per cent; oats, 91; spring wheat, 92; winter wheat, 97; barley, 91; rye, 97; flax, 92; potatoes, 94; hay, 97; pastures, 101; apples, 76; plums, 64; grapes, 92. The acreage of corn is practically the same as last year, there being only a slight increase. On July 1st, corn was rated at 80 per cent and on July 1, 1912, at 89 per cent.

Geo. M. Chappel, Sec. Dir.

JULY THE MONTH TO PROPAGATE ROSES.

To the Editor of The Homestead:

I have found July the best month to propagate the Crimson Rambler and most of the hybrid perpetual roses. The blooming season is over and the blooming shoots are ripened up well, and make firm wooded cuttings, the only kind that will root. Never waste time putting in a pithy cutting. Tea roses can be propagated as well at this season as any other, but they bloom continuously, and any shoot from which a bloom has just matured will make good cuttings unless soft and pithy.

Tea roses propagate readily, but the Crimson Rambler, Baltimore Belle, the hybrid perpetuals, and several other hardy sorts are rather difficult, for they are apt to shed their leaves soon after being put in the sand, and no cutting will root without a leaf, that is, root right, so they will make even fair plants, and it is very seldom they will root at all, though they keep promising to do so, and form a mass of callous often as large as a marble.

I have rooted thousands of roses of all kinds in the greenhouse, but the best success I ever had was when I was a boy I put a lot of Crimson Rambler and clio cuttings in a box of sand. I was just beginning to be interested in flower growing, and was hoping that some day I would have a greenhouse, and I had sent for Henderson's "Practical Floriculture," and found he said it was useless to try to propagate any rose grown out of doors, as they would not root. I had that beautiful blush pink rose and I did not know its name. I wanted to get more of it, and I wanted to make a Crimson Rambler hedge also, so I just determined that Peter Henderson might be mistaken. I took a box abbout eight inches deep and cut it down on one side two inches, and slanted the ends down to it, and fitted a glass on top. The bottom of my box was pretty solid, so I bored a hole in each corner, and put some cinder crushed pretty fine over each hole, and filled the box with four inches of sand washed perfectly clean. I took another box a little wider than my box and just long enough so it would just fit inside it, and, fitting a couple of cleats in the larger box, I set the cutting box inside, just so the top of the glass was four inches below the top on the highest side. There were four inch spaces between the sides of the two boxes, front and back, so there was good circulation of air. I fitted frame to hold a heavy muslin curtain so it would shade the cutting box at all times except in the early morning. My box was then ready for the cuttings.

Now in taking these cuttings I cut some with a heel, or piece of the old wood, attached, some with just one joint, and some with two or more joints. The small wiry shoots with a bit of the old wood attached rooted somewhat the best, but the difference was not great. The cuttings were set in the sand about an inch and a half, or just so the first joint was clear. Care was taken to get the leaves standing as nearly upright as possible by slanting the cuttings some, but they were slanted the same.

The sand had been thoroughly saurated before the cuttings were put in and then I watered them well every morning and sprinkled them once or twice during the day, as the weather seemed to make advisable. Nearly all the Crimson Ramblers rooted, though many of them lost their leaves after they had started, and made such a feeble growth I discarded them. I got probably 20 per cent of the other varieties to grow.

At one time when rooting a lot of cuttings I let the sun shine on them direct through the glass, having neglected to put the curtain in place, and, along about two o'clock I found the foliage "boiled" so it dried up and fell off in a day. Of course those cuttings were gone. An hour's neglect will easily destroy the result of several weeks' careful labor. Subscriber.

Perfection Stud Socket

No Sills Required
The Real Thing
No Imitation

An ingenious device for fastening wood buildings to concrete floors. Cannot rot. No bolts to rust off. Made in all sizes of heavy cast iron. Better, stronger and cheaper than all others. Ask your dealer for them or write for folder. Pat. and M'f'd. by E. A. PURDY, Amboy, Ill.

TOO LATE TO CLASSIFY.

AN extra big yearling Poland boar, best breeding, good individual. Address
PERRY A. SNYDER, DAVENPORT, NEB.

SHORT-HORN BULL Bargains. Four extra choice bulls at very low prices. B. F. Mason, Seward, Nebraska.

Breeding Operations at Woodlawn Farm.

Woodlawn Farm, Sterling, Ill., is one of the big breeding establishments of the middle West, a place where results are being accomplished and where affairs are carried on in a big way. One of the largest and most select herds of Holstein cattle is maintained, as well as a stud of Percheron horses and a large band of Shetland ponies, while swine breeding and the raising of market hogs is by no means overlooked. One thousand acres of as good land as can be found in Illinois is embraced in this farm, or farms, rather, for there are two of them, and from the standpoint of productiveness they are hard to beat. The directing head of affairs, the man who brought the institution to its present successful condition, is Judson T. Williams. Some ten years ago he purchased part of the present land equipment. It was in a run-down condition, and he faced a hard task in bringing it back to its producing ability, but he has succeeded most wonderfully, as is attested by the handsome yields that are secured from the fields each year. Mr. Williams early realized that nothing will so build up soil as live stock, and there has never been a day from the time he secured the land up to the present time that there has not been a plentiful supply of live stock upon the farm. As occasion arose Mr. Williams secured adjoining lands, until today there are 1,000 acres embraced in the plant at Woodlawn Farm. The biggest live stock operations are carried on in Holstein cattle, the herd at the present time numbering over 250 head. The management at Woodlawn Farm carries on a large dairy equipment, selling milk and butter and manufacturing ice cream on a large scale, besides their breeding operations, and as a consequence the only cow they have any use for is the strictly working kind. They do not keep any star boarders. All cows have to work all the year around. Many of the cows have records that are remarkable, and they have all been made under ordinary conditions, as they chase no fads or fancies at this establishment. The cows for this herd have all been selected with a view to combining high milking qualities with conformation and quality, and to secure satisfactory results along the breeding line the best Holstein bulls that money could procure were selected for use at Woodlawn. The head herd bull at this time is Sir Netherland Cornucopia, who has twenty A. R. O. daughters. This bull represents a rare combination of breeding, his ancestry in all directions not only having great milk and butter records, but being noted prize winners as well. His nine nearest dams average almost twenty-four pounds of butter and nearly 500 pounds of milk. His great grandsire, Sarcastic Lad, was grand champion at the St. Louis World's Fair, and his own brother in blood has been twice champion of the New York State Fair and has sired first prize winners. The Woodlawn herd now contains a large number of daughters of this great sire, and they are all giving a most satisfactory account of themselves at the milk pail. Prince Hengerveld Segis by a son of King Segis, and out of a twenty-nine-pound daughter of Korndyke Queen De Kol's Price, is another bull in use at Woodlawn, and he is proving himself a most prepotent sire. King Cornucopia Hengerveld's Segis is the youngest bull at Woodlawn, and is a splendid individual, representing a combination of three of the greatest families of the breed, Hengerveld De Kol, Kng Segis and Cornucopia. With this array of great bulls mated to the outstanding cows at Woodlawn nothing but the best results can be expected, and a visit to the farm shows this to be the case. Woodlawn is a breeding establishment, the element of speculation in no way entering into the proposition. The management does not aim to produce a few sensational animals, but rather to breed a class of cattle whose merit is well above the ordinary, that are always dependable and continuous workers. A visit to the dairy herd at Woodlawn is a day well spent. The other live stock operations at this farm, while carried on on a smaller scale than the Holstein herd, are yet handled with the same thoroughness and attention to detail and the same satisfactory results are being achieved. Mr. Williams has a great love for a good horse and the producing band of Percheron mares shows the work of a master hand, while no establishment can show a stronger lot of Shetland ponies. The production of pedigreed seeds is a new department at this farm, established last year, but it bids fair to become a very important factor. It is as a Holstein breeding establishment, however, that it takes pre-eminently a front rank, and at no farm will a better class of cattle be found, nor cattle that give a better account of themselves as a working proposition. Mr. Williams has given many years of his time to accomplish the present desired results, but has always gone ahead with a definite object in view, and that object he has accomplished—the building up of a continuous working herd of Holstein cattle of the best breeding and strongest individual worth.

Hanna's Short-horn Dispersion Sale.

One of the most important events in recent years in Short-horn circles will occur at Chicago, July 29th and 30th, when the Cottage Hill Short-horn herd of D. R. Hanna will be dispersed at public sale. Established some fifteen years ago, this herd has long been one of the largest and most prominent in the country, and the decision of Mr. Hanna to disperse the same will be received with regret by Short-horn lovers everywhere. Mr. Hanna founded his herd by securing the very best blood obtainable, and from time to time has added to the same by liberal purchases, both at home and abroad. Some of the greatest bulls the breed has produced have been used at Cottage Hill, and the present herd sire, Imp. Villager, is destined to leave his impress as a great sire upon the entire breed. The show ring record of the Hanna Short-horns is too well known to need any detailed mention here. Under the skilful hand of Manager John Garden they have been a strong factor in all the big shows for the last decade, and have to their honor many of the most desirable winnings in the show ring annals of that time. Wherever the show was the hottest there the Hanna Short-horns were to be found and always either at the top or fighting for the top. One hundred and twenty-five head of cattle are cataloged for the coming sale, and every one has a straight Scotch pedigree. Even were it not a dispersion sale, it would be a remarkable offering of cattle, and when one stops to consider that included are many cattle that Mr. Hanna has hitherto absolutely refused to price, the reader can at once see that the sale is something far out of the ordinary. There will be fifteen bulls, five of them imported, and the list includes the great Imp. Villager, one of the greatest breeding Short-horn bulls in the country today, his show and breeding sons, Village Denmark and Village King, several young bulls by Villager and Village King, and four bulls that were bought in Great Britain by Mr. Hanna for use in the Cottage Hill herd before he decided to sell it. They are Champion of Scotland, Scotch Mist, Cornerstone's Heir and Scotch Buckle. The female portion of the sale numbers 110 head, thirty-five of them with calves at foot by Villager, Village Denmark or Village King, and all of breeding age are in calf to one of these bulls. Thirty daughters of the great Villager are listed, which of itself should be sufficient to draw buyers from all sections. In later issues we will have more to say in detail regarding this great sale, the most important dispersion event of recent years. The catalog tells the story and should have wide distribution. Write for a copy to John Garden, Ravenna, Ohio, mentioning The Homestead, as per the advertisement on page 24.

Regier's Durocs.

One of the best lots of spring pigs, numbers considered, that we have seen to date are owned by A. J. Regier, Henderson, Neb. It is surely fitting that he should have such a herd, for without question he has one of the best sow herds that we have seen in the state. His herd of sows is not large, something like a dozen all told, but what they lack in numbers is surely made up in quality. There are a half-dozen sows on this farm that would made creditable showing at the state fair They are by Uneeda Crimson Wonder, Lincoln Wonder, Cleatham's Pride and Crimson Wonder 4th. This is surely royal breeding, and the sows are careful selections. One Uneeda Crimson Wonder sow was the second high priced sow of the Widle sale last year and she has a litter by the champion boar, Critic B. This is the best Critic B. litter that the writer has seen this season. They are really great. The greater part of the remainder of the pig crop is sired by R. & J.'s Golden Model by Golden Model 2d, with a litter or two by A. J.'s Crimson Wonder by Crimson Wonder 4th. Crimson Wonder 4th was the first prize junior yearling at Lincoln a couple of years ago, and has sired some wonderfully good stuff. Mr. Regier will not make a fall sale, and will offer these boars at private treaty. There are pigs here as good as we have seen anywhere, and they are being priced right for immediate shipment. The writer would lose no time in ordering their pigs, were we in the market, for they are absolutely right, and a moderate price is asked, and some saving in express may be effected. When you write mention The Homestead. Kindly watch for further mention of this herd. We forgot to mention that Mr. Regier has two boars that he would sell. One is a fall boar by R. & J.'s Golden Model and out of sow by Cleatham's Pride and the other is a son of Crimson Wonder 4th and out of a Lincoln Wonder Sow. This is the very best kind of breeding and these are two extra good boars. The Crimson Wonder 4th boar is really a herd-heading proposition.

RED POLLED CATTLE.

YOUNG BULLS

RANGING in age from Sept. 1912, to three months old. Heifers bred or open. Write your wants or come and see them. Farm reached either from Clare on M. & St. L. or Barnum on I. C.
FRANK J. CLOUSS - BARNUM, IOWA

RED POLLED BULLS

A few very choice bulls, some of them by the great Happy Jack 2d, without question one of the very best of the breed. Order today, or write for full description and prices. Mention The Homestead and address Luke L. Wiles, Plattsmouth, Neb.

POLAND CHINA SWINE.

COOPER'S SPECIAL 30-DAY BOAR SALE

WE have over **100 head of boar pigs of spring farrow.** We have 25 sows to begin to farrow in 2 weeks. We must have room for them. Hence, for 30 days we are going to sell these boars at prices they will bring on the market next fall, and they will be worth $40 to $100 each as breeders at that time. They are all immunized. We guarantee safe delivery and record them at

25 DOLLARS EACH

They are sired by Big Expansion (the 800-lb. son of the noted Dorr's Expansion), Big Bone 2nd (weighing 900 actual pounds, a son of Big Bone), Chief Leader (weighing over 500 lbs. at 14 months old), and Ideal Chief, and other noted boars. **The dams are sows weighing from 500-lb. yearlings up to sows of over 800 lbs.** If you are in the market for the biggest blood lines, from big sires and dams, send your check, tell us the kind of pig you want and we will send him or return your money. You will not buy such boars, such breeding, at the price again this year. Buy your boar now and save 20 to 50 dollars on him.

W. H. COOPER - - - - - - - - - - - **HEDRICK, IOWA.**

BIG BONE 2d 161497.

J. O. JAMES' SENSATIONAL PIG BARGAINS

I WILL book orders up to 100 head of spring pigs sired by my half-ton, **Big Orange, Ott's Big Orange,** who weighed 700 pounds on the scales just turned 19 months. **Big Sensation, Big Orange's King, A Wonder Giant** and **Gritters' Best.** All strictly big-type boars and out of extra big, long, heavy-boned matchless sows, many of them weighing from 700 to 800 pounds. These sows averaged 9½ pigs to the sow, many of them 10 to 13 pigs. I want you to write, describing just what you want. It makes it easier to pick the pig that will suit. I am pricing these pigs low for quick sale for June delivery, or at weaning time, for orders booked during May, or while they last, **$25 to $35.** Must be bought during this month to get this price on them. Many of these pigs will be worth $100 to $150 by October. You can save from $75 to $100 by buying now. The early buyer catches the bargains. The dams of these pigs are sired by Big Orange Big Sensation, Pawnee Nelson, Long King's Equal, Big Ex and Longfellow Jr. You can't beat sires, dams, pigs or prices. We guarantee our pigs to be as represented. Let me hear from you at once as orders are coming fast. Mention Homestead when writing. **J. O. James, Braddyville, Iowa.**

C. F. Adams' Big-Type Poland Chinas

I WILL sell spring pigs sired by my great herd boars, **Big Halvor** (generally conceded to be one of the very best big-type boars in Iowa), **Maid's Halvor 1st,** a son of **Big Halvor** and out of the mammoth sow, **Long Maid,** and one of the grand young boars of the breed, **Mammoth Jumbo,** a son of the noted **Big Jumbo** and **Grand Chief,** bred by John Miller. These pigs are out of a herd of

Sows That Cannot Be Surpassed for Size and Quality

These sows are bred in the purple, many of them being sired by the great sire, **Big Halvor,** others by **Coming Wonder, Big Nelson,** etc. I know I can please you in a pig and that you will be more than pleased with the manner in which they develop. These pigs will be worth three and four times what I am asking for them within the next year. Write me for prices, mentioning Homestead

C. F. ADAMS - - - - - - - - - - - - - - - - - **OWASA, IOWA.**

BIG-TYPE POLAND BOARS

20 FALL BOARS sired by the 1,000 pound Mastodon Chief and Tecumseh Prince, 2 yearling boars by Mastodon Chief, and some good spring boars by Mastodon Chief, Big Jumbo 2d and Mastodon Wonder. The fall boars are a good bunch and are priced right. Mention The Homestead when writing.

E. W. KREISCHER, MT. VERNON, IOWA

LAWSON'S SENSATIONAL BIG POLAND CHINA BARGAINS

THE home of the noted breeding boar, **Long King's Equal** (weight 965 lbs. in breeding condition, weighed in the presence of forty breeders). Sows bred to him and **A Wonder's Jumbo** for fall litters. **150 Choice Spring Pigs** that I am now offering at private treaty. Will not hold fall sale and will sell these out privately at less than half the money they would bring in a sale. Now is the time to get your bargain while the good ones are here. Write me at once for description and prices and mention Homestead.

JOHN B. LAWSON - - - - - **CLARINDA, IOWA**

Fall Poland China Boars

I HAVE now for sale the best lot of fall boars I ever raised. They will weigh from 250 to 275 pounds. I have spring pigs weighing 75 pounds or better. These boars are sired by Pawnee Expansion and R. C. Pawnee Lad. The fall boars will be sold at $35 and $40 each, crated and ready for shipment.

JOHN I. DRIPPS - - **SPRINGVILLE, IA.**

25--Big-Type Poland China Sows For Sale--25

These are all strong in the blood of the strictly big kind and are bred to the 900-lb. Mouw's Big Sioux for fall litters. I am also offering to sell my splendid 2-year-old boar, Smooth Jumbo. Write me at once and mention The Iowa Homestead. Address - - - **GEORGE GLYNN, Sioux Rapids, Iowa.**

12 HIGH-CLASS POLAND CHINA FALL BOARS

I AM offering 12 strictly choice fall boars sired by the great 950-lb. boar, **Pawnee Nelson,** that is regarded as one of the greatest living Poland China boars. These are out of 600 and 700-lb. sows. Price $40 to $50 for quick sale. Address, mentioning The Homestead, **A. H. Windom, Nodaway, Iowa.**

BIG-TYPE POLANDS

OF the thick, smooth, heavy-boned kind. Fall and spring boars and gilts sired by Dale Expansion 190135. Also choice sows bred to him for fall litters.

F. E. JACKSON, HURLEY, SO. DAKOTA.

AUGUST GORDER'S POLAND CHINAS

A FEW choice fall boars sired by Teddy by the champion, Big Mischief. A nice crop of pigs sired by Futurity Jack and Matchless Expansion. The sow herd is by such sires as the 1,000-lb. Centennial, Colossus, Big Victor and other noted big boars. Address today and mention The Homestead.

AUGUST GORDER, **PLATTSMOUTH, NEB.**

FAULKNER'S SPOTTED POLANDS

THE old original big-boned spotted kind. Now booking orders for spring pigs to be shipped when weaned. Pairs or trios, no kin. Everything Registered. For the kind of our forefathers address

Homer L. Faulkner, Box 117, Jamesport, Mo.

DISPERSION OF HANNA'S COTTAGE HILL SHORT-HORNS

CHICAGO, ILLINOIS, JULY 29 AND 30, 1913

125 Scotch Bred Cattle 15 Bulls--5 Imported
35 Cows with Calves at Foot 30 Daughters of Villager

NO offering of recent years has contained as much value as will be presented in this sale. The greatest line-up of bulls will be offered in imported Villager and his outstanding sons, Village Denmark and Village King. In additionare four bulls imported this year for use in the Cottage Hill herd, Champion of Scotland, Scotch Mist, Cornerstone's Heir and Gold Buckle. There will also be eight young bulls, mostly the get of imported Villager. There will be 105 females, 35 of them with calves at foot by Villager, Village Denmark or Village King, and all others of breeding age will be in calf to one of these bulls. Every animal listed has a straight Scotch pedigree. It is an absolute dispersion, consequently everything in the herd will be sold, and the public will have an opportunity to secure cattle that under other conditions would be priceless. The catalog tells the story, and you can have a copy upon application. Write for one today, mentioning The Homestead, and address

FAIRVIEW STOCK FARM
PERCHERONS, BELGIANS, SHIRES, MAMMOTH JACKS and JENNETS

SOME extra good home-bred stallions. Percherons and Shires, pasture raised and in splendid thrift. The sort to do a lot of hard service. A few extra high-class big jacks 3 to 5 years old and 30 Jennets, all ages. Democratic prices on this stock for next 30 days. Want to close them out. Address, mentioning The Homestead,
HENRY BECK, - - LITCHFIELD, NEB.

Purchase Percherons

NOW is the time to buy Percheron mares, with foals at foot, rebred for 1914 foals.
BUY THREE IN ONE
See the mares in pasture or infield work.
See the kind of colts they are suckling.
You can buy more intelligently now, than any other time of the year. For information, and full lists of Percheron Breeders, address Percheron Society of America, **Wayne Dinsmore, Sec'y. Union Stock Yards - - Chicago, Ill.**

STALLIONS

Home-bred draft stallions $250 to $660. Guarantee to sell you imported stallions for less money than any firm in America. Come to a live stallion market and see all draft breeds. A. LAFIMER WILSON, Creston, Iowa.

PERCHERON AND BELGIAN Stallions and mares, selected and imported under my personal supervision. Ea. a splendid animal and offered at extremely low prices. Call or write **V. W. HARMS, FAIRBURY, ILL.**

PALESTRO I. 52027 (87506) will make the season of 1913 at my farm 2 mi. east of Garner, Ia. Palestro I. is a black sired by Mon Jarret (47526) by Theudis, by Besigue, by Brilliant III, and dam traces to Brilliant III. Write for terms. Henry Moll, Garner, Iowa.

FINE spotted Shetland stallion, 7 years old, 40 inches, sure foal getter; first check for $150 takes him. Also one yearling spotted stallion colt and two filly foals almost old enough to wean. Guy J. Pote, Bridgewater, Iowa.

AN EXTRA LOT OF YOUNG CLYDESDALE STALLIONS that I will sell at right prices. Address R. O. Miller, Route 1, Lucas, Iowa.

SHETLAND PONIES

STRICTLY choice lot of stock, best of breeding and attractive prices. C. S. Bratt, Arapahoe, Neb.

300 **SHETLAND and Welsh ponies** for sale, all ages, including prize-winners. Write us your wants. **T. S. Simpson & Sons,** Aurora, Ill.

When writing to advertisers please mention The Homestead.

BELGIAN EMPORIUM OF AMERICA.

A CHOICE collection of **Belgian** stallions and mares constantly on hand. Several importations annually. Catalog on application. Address
HENRY LEFEBURE - FAIRFAX, IOWA.
Eight miles west of Cedar [illegible]

PERCHERONS

Eleven home-grown 3-year-old stallions, exact wt. 1,840 to 2,090 lbs. Broke to work, sound and with bone to spare. July 10th these and young sters for sale. The **biggest** Percherons pay you best. Drop a card for details.
FRED CHANDLER
Chariton, Route 7, Iowa.

Stooker's Stock Farm

OFFERING just now some very choice Percherons. A pair young stallions and a few mares. Write for full information. Address
F. A. STOOKER, DUNBAR, NEBRASKA

POLLED DURHAM CATTLE.

WAYSIDE POLLED DURHAMS, Poland Chinas, Wayside Victor, roan, Scotch bred 3 yr. olds, and calves 6 to 12 mos., choice big-type fall pigs, either sex. E. J. Augspurger, Pulaski, Ia.

YORKSHIRE SWINE.

LARGE YORKSHIRES Gilts bred for Aug. and Sept. farrow. Pigs not akin of Dec. and Jan. farrow. Booking orders for spring pigs. Pedigree with each sale. Prices right Address W. C. Cook, R. 42, Box 22, Ada, Michigan.

DOES YOUR

Harness Need Mending?

SEEDING, corn plowing, haying, harvesting and threshing are all destructive to harness. No doubt your harness needs mending. Anyone can mend his harness with my Speedy Stitcher. The broken part will look just like a harness maker had mended it.

The Speedy Stitcher is the latest invention and the most effective of anything in the form of an Automatic Sewing Awl ever offered. Its simplicity makes it a thoroughly practical tool for any and all kinds of repair work, even in the hands of the most unskilled. With this Awl you can not only mend harness, but shoes, tents, awnings, pulley belts, carpets, saddles and suit cases.

The Speedy Stitcher is provided with a set of diamond-pointed, grooved needles, including a special needle for tapping shoes. It also contains a large bobbin, from which the thread feeds. Both needles and bobbin are enclosed inside the handle out of the way. This Awl has a tension which enables you to tighten your stitch. These valuable features you will not find in any $1.00 Awl.

MY BIG FREE OFFER

I will give one of these excellent Speedy Stitchers absolutely free to anyone who will send me $1.00 for one year's subscription to The Homestead.

Kindly use the coupon below and be sure to send your order in today before you forget it.

DES MOINES, IOWA, THURSDAY, JULY 17, 1913.

SAVING OUR GREATEST CROP

How the Campaign to Put Babies Alongside Hogs and Horses was Begun and is Being Carried on to Success at Various Grain-Belt State Fairs.

A SWEET-FACED, white-haired country woman walked out from the Western Live Stock Show at Denver last winter, gave her hair a few deft pats, breathed a tired sigh and wasted just enough energy to whisper to her companions, "I feel as if I were the center of a whirlwind that bids fair to take me off my feet." Saying which, she hurried to the depot, took a fast train to the capital of Iowa and, having plodded wearily up the long hill to the state house, fairly swept the staid legislators off their feet with the enthusiasm with which she pleaded for a $75,000 appropriation for a new building on the state fair grounds.

For the first few minutes the legislators were only idly interested. Then a mild sort of curiosity began to manifest itself as to what sort of a building this little gray lady was demanding. They had made appropriations for swine, horses, cattle and sheep; perfectly good state money had been expended for the housing of everything from acorns to zebras, "from agate to zinc." If there was any crop grown in Iowa for which ample provision had not been made, either for exhibition booths or competition premiums, they would like to know what it was. Accordingly, they sat up with anticipated triumph aglow on their faces as one of their number asked the little country woman what she had in mind when she spoke of Iowa's greatest crop, as yet altogether unrecognized by the generous state.

A smile played about the lips of the animated and effeminate whirlwind vortex

A GOOD CHEST ON A STURDY LITTLE STATE FAIR ENTRY.

with the sweet face and the white hair as she murmured one word only:

"Babies."

The story with which this amazing and unexpected reply was followed gave the legislators an inkling of the big things concealed by the little answer.

At the 1911 Iowa State Fair, for the first time in any state, a babies' health contest was held, under the direction of energetic and charitably inclined doctors and club women. A country mother came with her two-year-old baby in tow. He was a sweet little fellow, with an ever-ready smile and his fond mother had pictured to herself, all the way as she drove in from the farm, how he was bound to eclipse all the other entries and win first prize. Was not his hair silkier and browner; were not his eyes a heavenly

THE LITTLE GRAY COUNTRY WOMAN TO WHOM CREDIT IS DUE.

shade of blue; were not his cheeks perfect ovals? But when the kindly doctors had stripped the little lad, felt of his muscles, peered down his throat, thumped his chest and otherwise determined his fine physical points, as carefully and as systematically as the live stock judges went about their work in the handsome and permanent pavilions adjoining the humble little tent where the babies were herded, they shook their heads and passed down the line to the next entry. The indignant farm mother demanded reasons. They were quickly forthcoming: enlarged tonsils, adenoids, flabby muscles, trace of tuberculosis and so on; with not a single word about silken hair or eyes of heavenly blue. One of the doctors took the farm mother aside, handed her pamphlets and books on the care and feeding of babies, explained that the contest was for health, and not for beauty, and then bade her take hope, follow the prescribed course of daily routine and bring her baby back the next year.

That little rejected laddie from the farm, carefully reared on the outlined course of exercises and dietetics the ensuing year, won first prize in a class of more than forty entries at the contest held at the Iowa State Fair in 1912.

"So you see," said the little gray lady, "we can breed our babies with just as good and just as apparent results as we have long bred our pigs."

That is how it came about that the dignified legislators of a state as great and as rich as Iowa decided to appropriate $75,000 for a Child Welfare building, Iowa being the first thus formally to recognize the new campaign, just as it was the first to hold such a contest. There are figures a-plenty to prove the necessity, the crying need, of just such a campaign and just such recognition. Consider these, for instance: There are in Iowa 7,545,000 hogs, one-sixth of which are suffering from cholera. Immediately an insistent demand goes up for $50,000 to suppress this disease, for the hogs are worth $12,000,000. There are in Iowa, likewise, 258,000 babies and children under five years of age, one-fifth of whom will be dead within the coming five years, following the ratio proven by medical science. A child, well born, is estimated under the law to have a value of $500, a total for the state of $129,000,000, one-fifth of which, or more than $25,000,000, will be lost, as against $12,000,000 on pigs. Why, then, argued the little gray lady and her determined co-workers, should the legislators look aghast at an appropriation of $75,000 for a campaign to save babies when they thought nothing of appropriating $50,000 with which simply to check disease among pigs. Babies versus pigs, pigs versus babies, looked at either way there seemed to be merit, indeed, in the proposition to pay as much attention and give as much money to the greatest crop of all, which heretofore had been absolutely overlooked.

The idea came quite unexpectedly, it was of small beginnings. It originated in the brain of the little country woman who is

GOOD BRAINS HIDDEN AWAY BENEATH SILKEN TRESSES.

devoting her time to its propaganda. She was in charge of a booth at her home county fair, just such a fair as is held annually in hundreds of rural counties: pumpkins and slow horse races, hogs and crazy quilts, homemade jelly and threshing machines snorting all over the lot. "I was listening

A SHORT OR LONG CATTLE-FEEDING PERIOD.

During the last few years experiments have been conducted at the Nebraska station for the purpose of acquiring information relating to the factors involved in short and long feeding periods for fattening cattle. The outcome of these experiments leads to no definite conclusion. In addition to economic conditions bearing upon the problem the feeder must always face the fact that he has no control over market conditions. While it is possible to finish or half finish different types of cattle and determine in that way the cost of gains under a variety of conditions, yet when it comes to marketing, values may be on such a basis as to wipe out all profits, even though gains have been economically made and on the other hand the market may take a turn to afford even the extravagant feeder a profit.

In a bulletin on this subject the Nebraska station furnishes one illustration showing the effect of market conditions in two lots of short-fed cattle. On March 17, 1910, one lot of short-fed cattle was marketed and returned a profit, including pork, of more than $28 per steer, while the cattle used in the second trial, beginning March 17th and marketed 120 days later, returned a profit of less than $10 per head, notwithstanding the fact that the latter made more rapid and cheaper gains than have ever been made by any other lot of steers fed experimentally at this station. Part of this is due to the condition of the cattle when started on feed in the second trial, but it is due largely to the influence of the market conditions.

In spite of the important effect of values at marketing time there are a few factors that must be kept in mind by the cattle feeder. For instance, steers of poor quality that could under no circumstances be made into prime finished cattle should not be carried to a high finish. The last 100 pounds of gain required to make a steer prime are the most expensive and the increase in the selling price must be correspondingly larger to secure profit from the additional finish. Obviously, therefore, it will not be profitable ordinarily to put on this high-priced finish when there is every assurance that it will not command a high price in the market. On the other hand on a well-bred steer this last 100 pounds may make him a market topper and the result in this case may justify the high finish, though the latter part of this may be made at a high cost.

The relative supply and cost of grain and roughage to be disposed of is a factor which should, in a measure, determine the length of the feeding period. Cattle for short feeding are usually in higher condition at the beginning of the feeding period, and therefore the proportion of grain to roughage consumed is greater than with cattle fed for a longer period. Where feeders wish to dispose of large quantities of roughage the feeding period is necessarily longer than when a larger proportion of concentrates to roughage is to be fed. In a general way, therefore, it may be said that the low-grade steer should be used for a short feed only, while in the case of the well-bred, fleshy steer a high finish will usually bring the surest and largest profits.

In the case of the individual who raises his own feeders and carries them to a finish there is only one type that can be handled at a profit on high-priced land, namely, the steer that inherits fleshing tendencies. Such cattle are the outcome of clearly defined breed characteristics, having in color and conformation the stamp of one of the great beef breeds. It does not discount the sound doctrine which requires that corn-belt farmers raise only a good type of feeders to say that when feeding cattle are put into the feed lot from outside sources it is under certain circumstances entirely practical to use steers of rather inferior grade if these are bought right and brought to a nicely warmed-up condition on the cheaper sorts of feed raised on corn-belt farms.

LOW RATES TO IOWA FAIR.

The Iowa State Railroad Commission has ordered a rate of one and a half cents a mile to and from the Iowa State Fair, which opens in Des Moines August 20th. This is in line with the law enacted by the legislature last winter providing for such reduced rates to all exhibitions and fairs with an annual attendance of 75,000. During the past week the railroad commision held a public hearing, at which representatives of the state fair board and of the Commercial Club of Des Moines urged enforcement of the law and proved the state fair to be in excess of the figures established by the legislature. Most of the main railroads of the state were also represented at the hearing. After taking the matter under advisement for a few days the commission ordered all roads in Class A (which includes practically all the leading steam lines of the state) to grant a round-trip rate of one and a half cents a mile instead of the flat two-cents-a-mile rate demanded last year.

Officials of the state fair board are confident that this reduction in rates will result in much larger attendance from outside Des Moines. The fact, however, that absolutely no passes will be issued to this year's fair, except to the immediate families of the fair board directors and to the exhibitors and their clerks, will offset to some extent the larger attendance resulting from the reduction in railroad rates.

WHICH ALFALFA CROP FOR SEED?

Alfalfa seed has averaged high in price for many years and seed values always suggest to the alfalfa grower the possibility of realizing a big price out of the seed crop. This is indicated by the number of inquiries received by this paper from men who are seeking information along this line, more particularly with reference as to which crop to cut for seed and when to cut it.

The United States Department of Agriculture has recently pointed out in a bulletin that the thinner stands of alfalfa make a better seed crop than where the plants are very thick. Where the crop is thin each plant develops more perfectly and hence is better adapted to the production of seed. The sunshine also penetrates the crop more completely and this in turn is favorable to seed development. It is further indicated by the fact that where isolated plants are found on roadsides they invariably are loaded with seed.

In his book, "Making Money on Farm Crops," F. B. Nichols points out why the second or third crop is better to use for seed than the first. Among other things this author says:

Usually the second or the third crop is left for seed, depending on the locality. August is a good time to have the plants maturing their seeds. The setting of the seed should be watched carefully, for if there is to be a light and consequently unprofitable setting of seed, as is often the case, it is important that this be known as early as possible, so the crop may be cut at once for hay, and the succeeding hay crop allowed to begin its development. If the conditions before blooming are such as to produce a rank vegetable growth, it is a fairly sure indication that the chances are poor for seed. If, however, the soil becomes dry just at this time, a fair seed crop may sometimes be obtained. Also, if the blossoms appear sparingly or if they appear freely but blast or wither without setting pods the chances for a seed crop are greatly reduced, and the crop should be cut at once for hay. After this cutting, another fair crop of hay may usually be obtained. If the cutting be delayed too long, it will be at the expense of the next crop, as the time for its development may be short. Another indication that a seed crop is likely to be very light is shown when the basal shoots begin to grow in anticipation of the succeeding crop. The development of these basal shoots takes place at the expense of seed development on the older stems.

If heavy rains occur or if continued cold, damp, rainy weather conditions prevail when the plants are in full bloom, the prospects of a seed crop are greatly reduced.

The chances for seed are good if the reverse of the above conditions prevail, and the plants have made a medium stocky, well-branched growth with an abundance of bloom, especially if the warm, dry conditions continue. It is practically impossible, however, to infallibly foretell the seed crop. The crop is not assured until the plants are well loaded with clusters of well-filled pods.

It goes without saying that conditions are not very favorable for alfalfa seed production in the corn belt and for that reason we advise our readers not to place their hopes too high on the revenue that might possibly be derived from this course. However, where the crop is not too thick so that the individual plants come to their fullest development and where the rainfall is such as to prevent seed production by the development of new plants there will exist the possibility of obtaining a fair crop.

DESTROY THE WEEDS.

The Iowa state weed law requires that between July 15th and August 15th each year the owners and holders of all lands shall destroy all noxious weeds and prevent their coming to maturity. One of the first official acts of the Iowa Highway Commission, created by the recent legislature, was to designate June 28th as Weed Day, with the result that hundreds of farmers, particularly in the southern part of the state, devoted a good part of that day to cutting down weeds. The response to the call of the commission was generous. The commission's attention was directed, however, to the fact that many weeds mature later in the northern part of the state than in the southern, making it advisable that a later date than the one first designated be selected as state weed day. Accordingly the commission decided upon July 15th and issued a call for a state-wide observance. We have no doubt but that this call has been observed in the generous and far-reaching manner it deserves.

The new Iowa weed law not only requires the owners or holders of all lands to destroy noxious weeds, but provides for their cutting by the municipality or county (in the event that the holders do not do this themselves), the cost thereof to be taxed up as a special lien against the property. The State Highway Commission believes that equally efficacious with this statute will be the pride which every Iowa farmer has, not only in the welfare of his own land, but in the general appearance of the entire community. In the call issued for a general observance of state weed day, the commission says: "State weed day is a call to the pride and loyalty of every holder of Iowa land. In destroying these weeds the first steps will be taken toward the realization of 'A More Beautiful Iowa,' when all the roadsides will be seeded and when these unsightly waste spaces will become a profitable field of timothy and clover."

The practical benefits of restoring to profitable cultivation the large areas now given over to wasteful weeds will be realized by every farmer.

SIMPLE FARM BOOKKEEPING.

A recent issue of an Iowa daily newspaper contained this paragraph:

Every farmer should have either in his house or his granary or scale house a little office where the accounts of the farm may be and should be kept, where he can talk business or study it in quiet. He ought to be able to strike a balance sheet from his records of the business done, the profits secured.

The suggestion is an admirable one. The question naturally arises: How shall the work be carried on? In most farm homes it will be easy to assign a room or even a corner of some room for the farm office. But how shall the accounts be kept? There are few farmers with a business college education, even though their sons and daughters are attending these institutions in large number. The intricacies of double-entry bookkeeping are sufficient to keep many a farmer from attempting the job. Is there not some simple and easy way of keeping the records? We are indebted to Mr. E. E. Rushing, of Tunnell Hill, Ill., for the following simple and practical advice on how to proceed:

I think it is best to use three separate books. First, a tablet such as the children use at school, may be used as a day book, and it is cheaper and more convenient than the more expensive ones. One tablet will last the average farmer about a year. A complete record of each business transaction should be made on this tablet, stating what was bought or sold, how much was paid or received for it, and to whom it was sold or from whom it was bought. This record can be made with a pencil every evening and will only take a few minutes to attend to it. The full details of each transaction should be made.

The second book should be a day book journal. This book should be ruled each way, dividing it into as many columns as you wish to make. The journal should be paged. It is best that the records in this book be made with ink. The transactions should be copied from the tablet to this journal as often as one wishes, but twice a month is often enough. At the left-hand side of the journal should be a space for the date. The next column should be wide enough to permit a short description of the transaction. The next column may be marked "personal accounts" and all accounts with persons where there are credits or debits to be given, should be placed in this column. If accounts of cattle, hogs, sheep, poultry, etc., are wished they should also be kept in this column. The next column may be for expenses, and all expenses should be kept, down even to a few cents. This will show the total expense for the year, no matter what it is for. There should be a column for income, and all income received, whether it be for stock sold off the place, or for labor performed away from home, should be placed in this column.

A double column should be made for cash. The right-hand side for "cash credit" and the left-hand side for "cash debit." All cash received should be placed on the left-hand side, and all cash paid out on the right-hand side of the account. The total of each of these columns should be placed at the bottom of the page; then subtract the cash credit from the cash debit and the remainder will give you the amount of cash on hand. This balance should be carried to the next page and placed in cash debit column.

The ledger is the third book to be used. A ledger that will last several years may be purchased for twenty-five cents. Every amount found in the "personal account" column should be posted in the ledger. Each account has a separate page, which has a credit and debit side, the right-hand side being the credit side. All your accounts should be placed on the debit side. Each personal account may be kept separate in this way.

This may seem like a long process to some, but if you will study it awhile, you will find it to be simple. The whole equipment will not cost more than $1 and will last the average farmer a long time. If the successful farmer is to know how he stands at all times it is absolutely necessary to keep a set of books. I believe it is just as beneficial to the farmer to keep his farm accounts as it is for the merchants and other business concerns.

There is nothing suggested above which the average man, whether he live on a farm or not, cannot easily practice. A little help now and then, perhaps, from the boys or girls who are solving arithmetic problems at school, with perhaps a few lessons from mother in the gentle art of keeping things neat, and the farm office may be installed and maintained much more cheaply and easily than we have been led to think. In these days when a quarter section farm requires the investment of $30,000 to $40,000 for land, machinery and stock, it is altogether wrong to let the years go by with no record of profit or loss and no way of telling what animals and what acres are productive or unproductive.

New milk is a balanced ration for a calf, as it contains the protein and the carbohydrates in the right proportion. When milk is skimmed the fat is taken out, and an unbalanced ration is the result, one that is richer in protein than it ought to be for the young calf. There is nothing better to replace this fat than flaxseed meal. Get the raw flaxseed ground. It contains 30 per cent of fat. Cook this into a jelly, and feed a calf a small amount of this at first with the skim milk, after which the quantity may be gradually increased. There is nothing else equal to flaxseed meal to take the place of the butter fat removed from milk for young calves.

BEST OR POOREST CORN FOR SILAGE.

One of the greatest advantages of the silo is its ability to make a very profitable feed out of a crop that would not amount to much if fed in the usual way. For this reason, silo owners are falling into the habit of putting their poorest crop in the silo. Where a farmer has corn that yields from thirty-five to fifty bushels to the acre, and another field that for some reason yields but fifteen to twenty-five bushels, he has found, if he has had a silo on his farm for any length of time, that it is more profitable to put the poorest corn in the silo and husk out the rest for the crib. This does not mean that silage made from the poorer corn is just as good as the silage would have been made from the better corn, but it does mean that the better corn does not make silage enough better to pay for using the best yielding corn of the farm for filling the silo.

The man who is skeptical about a silo being able to add to the feeding of a crop that is made into silage is inclined to the belief that silage is good only as the feed that is put into it is good. While it is true that the richer the fodder is in grain the richer will be the silage, we have seen it demonstrated times without number that a crop that produces very little grain makes a good feed when it comes out of the silo. It is, of course, an impossibility to claim that the silo adds to the feeding value of whatever crop is put into it, but it does preserve the feeding value of the crop so completely that it is worth fully as much when it comes out as when it goes in. With corn cut and put in the shock, it is quite different. While the feeding value may be the same to start with, that in the shock begins to lose value almost from the very day the shock is made, while that in the silo is preserved and does not grow less in value with age.

Even though the grain yield of a corn crop runs only from fifteen to twenty-five bushels to the acre, or even as low as ten to twelve bushels, there is still a great feeding value in the entire crop, putting fodder and grain together, if it is harvested at the time when the feeding value of both fodder and grain is the greatest. Always, before the days of the silo, the problem was to keep the feeding value in the crop, in other words, to preserve it. When the fall and winter season is dry, we have found that our shocked corn made much better feed. This was because it was preserved better, the weather not damaging the fodder as much as is usually the case. Now, with the silo, one is able to preserve all the feeding value that is in the crop at the time of harvesting, so, with even a light grain yield, there is still much value in the corn crop, probably more in a corn crop of light yield than in a crop of heavy yield than the difference in bushels to the acre would seem to indicate, a yield of twenty bushels to the acre, for instance, being worth more than half as much as a yield of forty bushels. This is because the feeding value of the fodder is very nearly the same in either case. For this reason, and more particularly for stock not on full feed, silo owners are finding it the best practice to put their poorest corn in the silo.

SOME CHARACTERISTICS OF HUMUS.

In his recent work on soil culture Dr. W. E. Taylor places a high value upon the function that humus performs in the soil. According to this author humus is as necessary to make the soil fertile as water is to make lime and sand into plaster. Without humus all soils would be as unproductive as pure sand, though the compound itself in its component parts is largely a mystery even to scientists.

Humus may be described as that portion of organic matter found in soil which is in a partially rotted condition. As it carries a percentage of nitrogen this element is supplied directly to plants during the process of decay while the production of organic acids in the same chemical change leads to the making of phosphorous and potash combinations which also feed the plant directly. Humus plays an important part in improving the physical condition of the soil by making it mellow and friable. It also assists in the absorption and the retention of moisture, prevents puddling, baking and cracking and renders light, sandy soils productive, while clay soils are made more tillable by its presence. The presence of humus in the soil affects the temperature of same in a manner that is always favorable to plant growth where there is satisfactory drainage.

The humus supply as it is added to soils from time to time must come from one of three sources. Either from the application of farm-yard manure, from the plowing under of crops or from the decay of roots in the soil. It is partly because of their large root development and their subsequent decay into humus products that gives such an important value to red clover and alfalfa as soil builders, though it must be remembered in this connection that these crops also add to the total supply of nitrogen in the soil by taking it from the air.

ARGUMENTS IN FAVOR OF LIVE STOCK FARMING.

In an address delivered before the National Association of Managers of Farmers' Co-operative Companies by Mr. J. J. Ferguson, of Chicago, the advantages of carrying on a system of live stock farming on the farms of the central West are pointed out in detail. Briefly these advantages, according to Mr. Ferguson, are:

1. The live stock farmer is not dependent upon one or more grain crops of uncertain yield and price. When he has fat cattle, sheep or hogs to sell he is sure an open market is waiting every working day in the year. His live stock is the same as cash in bank and almost everywhere can be realized upon inside of twenty-four hours. Live stock returns are not spasmodic when the business is properly handled. Further, if he is a specialty live stock farmer his crop is ready when the supply is light and price at the high point.

2. The man on the farm who sells off wheat, oats or corn is selling raw material on which a number of men will later make a manufacturer's profit. The producer of raw material is usually relatively the most badly paid man in the line.

3. Growing and fattening live stock permits the continuous economical employment of farm labor, which in a system of exclusive grain farming is needed only at special seasons when labor is scarce and prices consequently high.

4. Pasturing of live stock and rotation of crops needed to supply them with the necessary feeds is nature's own best prescription for clean farms, free from weeds.

5. This same system of crop rotation together with the growing and fattening of cattle, sheep and hogs permits in the highest degree conservation of natural soil fertility, which is the prime object of every good farmer.

6. In sections devoted exclusively to grain growing there is a time every year when farmers complain of shortage of cars, lack of elevator capacity and congestion of loaded cars at terminals. Everyone wants to ship grain at the same time and everyone cannot be accommodated. The daily movement of live stock to market means not only daily revenue for the farmers, but also prevents in the most sensible way railway congestion, enabling railroads to give all classes of shippers more regular and uniformly better service.

7. Live stock in the hands of the farmer furnishes him the best possible security to be offered his local banker. When a farmer wants a little money for permanent improvements on his land or any other legitimate purpose American bankers have found cattle paper absolutely safe and liquid in times of financial peace or panic.

If live stock farming is to become more popular on the farms of the corn belt an additional argument must be forthcoming in its favor, namely, that a larger profit can be realized from marketing grain and roughage through the medium of live stock than can result in the carrying out of any other policy. These profits must be apparent, directly as well as indirectly resulting from increased soil productiveness that is always associated wth live stock production. When live stock values reach that stable basis where sensible feeding methods will always result in a profit to the farmer, then and then only will the majority engage in the industry. It would seem as if the relation between population and the number of farm animals is such at the present time as to lead to the conclusion that it is a safe and sane business policy for men who are endowed with a natural live stock instinct to perfect their plans for pursuing a fixed policy in live stock raising to be continued for an indefinite period.

Mr. Ferguson's arguments are good, but they do not place enough emphasis on "immediate profits."

CHORES AND CHILDREN.

A Wisconsin subscriber calls our attention to the fact that the Oregon school-teacher who gives school credits for home chores has no monopoly on the idea. We are indeed glad to learn that the grain belt is abreast of the Pacific northwest in this important matter of bringing home and school closer together and adding the necessary zest or incentive in chore work around home and farm. The Wisconsin communication follows:

I noticed in your last issue an article entitled "School Credits for Chores," concerning work done at home by the school children of an Oregon school. This has been carried out in this state in several schools in Manitowoc co- -y this year under the supervision of our county superintendent and our state rural school inspector. The credits were counted by points, i. e., building a fire five points, milking a cow five points, gathering eggs three points, carrying wood five points, getting a meal ten points, baking bread fifteen points, etc., and prizes were given for the greatest number of points. In connection with this, individual milk records, including tests, were kept of a herd of cows for a certain length of time, and credits were given for picking stones off the roads in going to and from school. These are some of the practical things for the country school which bring the school and home in closer relationship.

More progress has been made in the last four years toward practicalizing country schools and bringing them closer to the farm home than ever before. A great future is opened up by the laws passed by the various legislatures compelling the teaching of agriculture and domestic science. With alert, progressive teachers rewarding pupils who do home work to help father and mother the country school bids fair to take still higher rank and become a still more potent factor in making country life not only more profitable, but more satisfying in every sense of the word.

GOOD ROADS SCHOOLS.

Former Senator Jonathan Bourne, of Oregon, in addition to the honor of being father of the parcel post, aspires to the position of sponsor of the nation-wide good roads crusade. He is not only advocating a billion-dollar road campaign, which includes every state and provides for thousands of miles of permanent highway, but he is now advocating the establishment of a national academy of highway and bridge engineering, to which students shall be sent from every state to learn the art of road and bridge building as they are now sent to the war and naval academies at West Point and Annapolis to learn the art of waging war. In a statement issued during the past week Senator Bourne says:

An eminent railroad builder has been quoted as saying that there are not ten men in the United States qualified to take charge of a large project for highway improvement. Whether this be strictly true or not certain it is that there is no adequate supply of men trained for this important work. The American people are about to enter upon extensive highway construction and it behooves them to see that competent men are ready to take charge of the work.

Establishment of a national academy of highway and bridge engineering is one feature of my plan for federal aid to good roads. As in the case of the military and naval academies, I would have students apportioned among the several states and admitted after competitive examination, each student to be paid enough to cover his necessary traveling and living expenses. Part of his instruction would be of a technical nature, in the academy, and part of it of a practical nature, in the field. I have in mind a two-year course for students who have already completed courses in civil engineering, chemistry, etc. Two hundred graduates each year from such an institution would supply the need for trained supervision for highway construction.

I do not believe state institutions can satisfactorily conduct the educational work in highway and bridge engineering. There is no sufficient supply of instructors. State institutions are not equipped with the necessary laboratory apparatus. Moreover, I believe that much is to be gained by bringing to one central point students who are making a specialty of this line of work, so that they will get a broad grasp of the subject, will form personal acquaintances, and build up an esprit de corps which will aid in establishing and maintaining high standards of efficiency.

The suggestion is in line with the work being carried on in the agricultural colleges of several of the grain-belt states which have added practical courses in road building. Whether the country is ready for the adoption of this work on so large a scale as Senator Bourne proposes is another matter, but he is advocating both this and the bond issuance for good roads on the large scale which enthusiastic evangelists usually adopt. Mr. Bourne is no longer a member of the United States Senate, but is using his influence and fortune to further the road campaign upon which, to so large an extent, the prosperity of the nation and the welfare of the individual depend.

NOT COMPLEX, AFTER ALL.

The United States Department of Agriculture has recently issued a bulletin on road dragging which would be hard to excel for simplicity. We cannot do better than to print the paragraph in regard to the making and using of a split-log drag:

To keep a road smooth and crowned the best method is to drag it with a road drag. A road drag is made easily with two halves of a log which has been split. The log should be about six or eight inches in thickness and about six or eight feet long. The two halves of the log are set three feet apart with the smooth faces forward and upright. They are fastened together with braces set in holes bored through the log. A pair of horses may be used to drag the road and are hitched to a chain fastened to the front half of the log. The road drag should move forward so that it slants across the road in such a way that a small amount of earth will slide past the smooth face of the log toward the center of the road, thus forming the crown. The edges of the logs will smooth out the ruts. The best way to drag is to begin at the side ditch and go up one side of the road, and then down the other. In the next trip the drag should be started a little nearer the center and the last trip over the road the drag may work close to the center itself. Small ridges of earth will be thrown in the horse track and smeared by the round side of the log smoothly over the road. The smearing of the earth by the drag is called "puddling" and it tends to make the surface of the road smooth and water tight after the sun comes out. The road is always dragged after it has rained and not when it is dry. A good, strong pair of horses with a well-built drag can drag about three or four miles of road in a day, and it is the best way to maintain good roads. In every county some farmer along each four miles of road should own a drag and drag the road when it rains. He would always find the road in good condition when he goes to market.

The entire bulletin is equally simple, but practical, going a long ways toward offsetting the all too general impression that the road problem is so complex that only an engineer can cope with it. The trouble with too many of these big problems that confront us is that we are preached to in words beyond our understanding, while the simple remedy lies close at hand, if we only knew it. Millions of gallons of printers' ink are used in spreading high-sounding road treatises abroad, but the fact remains that the road problem is largely a matter of waking up to possibilities and taking advantage of opportunities and local materials.

AMERICAN ROYAL SHOW.

The management of the American Royal Live Stock Show announces that that exposition will be held October 6th to 14th and that the location will be at the Union Stock Yards, as in the past. In addition to the four beef breeds of cattle shown, namely, Hereford, Short-horn, Angus and Galloway, prizes will be offered for Jersey display of these dairy cattle also. There will be the usual horse, mule sheep, swine and poultry departments. The attendance from the country at the American Royal has always been large and this year, on account of there being no other fall attraction at Kansas City, it is anticipated that the Royal will attract a larger country attendance than ever before.

The corn crop of the United States furnishes yearly 250,000,000 bushels to mills, 40,000,000 bushels for starch and glucose, 21,000,000 bushels for distilled liquors, 14,000,000 bushels for malt liquors, 120,000,000 bushels for town feed, 45,000,000 bushels for export, 728,000,000 bushels for mules and horses, 724,000,000 bushels for swine, 254,000,000 for meat and cattle, 231,000,000 bushels for dairy cattle, 97,000,000 bushels for poultry, 92,000,000 bushels for human food, 60,000,000 bushels for sheep, 23,000,000 bushels for seed and 131,000,000 bushels for miscellaneous uses.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

I note by newspapers that a dozen turkeys are the cause of a lawsuit where the costs are $300 exclusive of attorneys' fees and the end is yet to come. This looks foolish to the outsider, but no doubt those interested are having the time of their lives.

If the wagon wheels are to be treated with boiling linseed oil let the work be done before the tires become loose. If the tires are loose it is best to swell the felloes by soaking with water before boiling in oil. Boiling linseed oil will not swell the wood, but it will prevent shrinking.

Don't be bashful about letting it be known that you are "thinking of buying an automobile." Let the demonstrators demonstrate while you keep right on thinking. After you have bought there will be no more free rides and very little free instruction.

The first silo built in this vicinity was eighteen feet in diameter and twenty-four feet high. This summer one was built that is sixteen feet in diameter and fifty feet high. The first building is not considered a silo at the present time.

Don't forget to make that "creep" for the little pigs where they can get away from the older hogs and enjoy a square meal all by themselves. "Well begun is half done" comes pretty near being the truth in raising hogs for market.

What is more delightful than a cool, breezy day after a couple of weeks of hot, sultry weather?

A man will work all day in the hot sun and not mind it much, but to stand idle in the hot sun for an hour is torture. This should be remembered when we tie our horses to a post while we do our trading in town. Horses have feelings as well as persons.

One hundred head of cattle to each eighty-acre farm is the talk of the arm-chair farmer, and as far as cheap talk goes it sounds all right, but it is a safe bet that those who waste their time in this kind of talk never put in many years in actual "humping" on the farm.

The hum of the old horse-power threshing machine is a thing of the past and I, for one, am glad of it. The toot of the steam thresher is a step in advance.

A spring washer keeps nuts from turning off on jarring machinery, but where the jar is continuous a cotter pin is surest. Makers of farm machinery can profit from the study of automobile construction in this respect.

The power baler has about driven the horse-propelled baler out of business in these parts. The power baler does better work, the run is steady and continuous, and faster baling is done. However, for smaller jobs the self-feed horse balers fit the work nicely.

Advocates of hard pine tongues for farm machinery would have had a hard time convincing me that pine is better than good oak, the other day. A tongue snapped in two almost at a touch, and, of course, it took me two hours to patch up with another old tongue and get back to work again.

No doubt 75 per cent of farm machinery bought still stands out in the weather the year around. Paint soon fades and flakes off iron, then the exposed iron turns red with rust. I often wonder why makers of farm machinery do not use galvanizing on their tools instead of paint.

It doesn't pay to let pigs get stunted if it can possibly be helped. It takes more to "bring out" a stunted pig than is required to keep him from becoming stunted.

Every rain now saves the corn crop.

Owners of good beef calves are going to have a fight on hands to keep from selling them this fall. Buyers are already making offers that are higher than has ever been paid before for the common run of beef calves. I heard a man say, the other day, he would pay any man $25 each for good beef calves that had run through the summer with the cows. I can remember when $7 and $8 was considered a high price.

A set of good files come in handy on the farm. I find use for round, flat and three-cornered files.

Some of my neighbors have been investing in second-hand autos that were bought first hand at a high price rather than to pay the same money for a new, low-priced machine. Some secured bargains, while others had better bought new and been content with the small machine.

Now comes the man who says he will see ten-cent hogs before we will see them back to six cents again. Of course, as hog producers, we hope that prediction comes true, but if it should there is no hope ahead for the cheaper meat that city folks are wishing for.

A good grain shock takes little hurt if it does rain three or four times on it, but the shock that is thrown together, then perhaps blown apart by the wind, is damaged every time rain falls. Since grain stacking has become almost a lost art, better shocking should be the rule, for sometimes our grain must stand in the shock longer than we like waiting for the thresher.

The horse of twenty and thirty years ago had one job the horse of today knows nothing about, that of traveling around and around all day long hitched to the sweep of the horsepower that was a part of every threshing rig. Such work was killing on horses, and the driver of the power usually saw to it that the whip was cracked more often around other teams than those belonging with the rig. Threshing used to be hard on both man and beast.

ALFALFA FOR POULTRY YARDS.

Alfalfa is one of the best plants to furnish green food for chickens, but ordinarily it soon kills out if over pastured.

Alfalfa crowns that have been cut off and plowed under and that have taken root again, are much harder to kill out, as many have found by repeatedly grubbing out the same stool that has taken root the second time. Such crowns seem to put out shoots from each piece of root that is left in the ground, if the soil is in favorable condition.

Those who desire to establish alfalfa in their poultry yards can succeed in this way by plowing or spading under alfalfa crowns that have been freshly plowed out from some field near by. Early in the spring is the best time, while the crowns are still dormant. The crowns should be covered four to six inches deep, and the soil wet down and kept moist and the chickens kept off until the crowns have become established, which will be much sooner than by alfalfa seeding, and will stand much harder pasture.—[Philo K. Blinn, Colorado Experiment Station, Rocky Ford, Colorado.

Save all the wood ashes and apply them to the orchard. They supply potash, which is a necessary element of fertility. In addition to the plant food value of ashes they benefit the mechanical condition of the soil in making it mellow and friable.

BEST SHEEP RANCH IN ENTIRE WEST. WILL CUT 500 TONS HAY (MOSTLY ALFALFA) THIS YEAR. CAN EASILY BE INCREASED TO 2,000 TONS ANNUALLY.

For Sale—Montana Sheep Ranch
Pays $20,000 a Year

7,000 ACRES IN HEART OF RICHEST VALLEY IN MONTANA, AT A BARGAIN—EASY TERMS.

Farmers who are now tilling high-priced land in Iowa and find it difficult to make fair profits are offered a big money-making opportunity on this fine ranch. For ten years past this property has made $20,000.00 a year for its owner, every year.

The property is located in the famous Smith River Valley, only six miles from White Sulphur Springs, county seat of Meagher county, Montana, and adjoining National Forest Reserve. It is practically all fenced; has new 2-story, 9-room house and good outbuildings, and entire 7,000 acres well watered; has own ditches and water rights—no water rentals or maintenance expense. 5,000 acres of the 7,000 can be plowed with steam plow. Lease for 3,000 acres adjoining included in purchase, making total of 10,000 acres in the tract.

ENORMOUS INCREASE IN MONTANA FARM VALUES.

Montana has an ideal climate and is one of the most rapidly developing states in the Union. The last census period shows increase in number of farms 94 per cent; increase in improved acreage 110 per cent; average value of farm land $16.75 per acre—AN INCREASE OF 205 PER CENT IN TEN YEARS.

The manufacturing interests also show rapid growth; 78 per cent increase in number of establishments during five years ending 1909, with increase of 28 per cent in wages paid and of 20 per cent in value of products.

TRANSPORTATION FACILITIES ARE GOOD IN MONTANA; LIVING CONDITIONS THE VERY BEST.

LOW PRICE—WILL PAY FOR ITSELF IN SIX YEARS.

This fine property can be bought for the very low price of $14.00 per acre, because the owner has two other ranches in the state which demand his attention. Only 15 per cent cash, balance on easy terms. Stock raising is easy in Montana. Any good stockman or farmer can **make this property pay for itself in six years.** Here's a rare chance for a lifetime competence. Better than government bonds, as an investment. Don't waste your time and energy on $200-an-acre land. Write at once for full particulars.

A. E. HINMAN, FIRST NATIONAL BANK - - - HARLOWTOWN, MONTANA

CURRENT EVENTS

DEMOCRATIC victory on the tariff, so far as congress is concerned, seems to be assured, as a result of forty-nine democratic senators pledging themselves to stand by the Underwood-Simmons tariff revision bill as a party measure. Every democratic senator (with the exception of the two members from Louisiana, who are opposing the bill because of its provision for free sugar within the next three years) pledged his vote, thus giving the party a majority of one, with the controlling vote of Vice-President Marshall available if necessary. A few days before this party pledge was taken Senator Hitchcock, of Nebraska, had withdrawn from the caucus, because of the party's refusal to accept his tobacco amendment. Senator Hitchcock announces, however, that he will support the measure, putting aside minor personal objections for the sake of party unity. Congress has already devoted three months to the consideration of tariff revision and at least another month must elapse before the bill can go to President Wilson for his signature. One of the last acts of the senatorial finance committee was to set the date when raw wool would be admitted free as December 1, 1913, and the date when the rates on the manufactures of wool would take effect as January 1, 1914. The bill has been amended in the senate committee so as to carry a schedule of rates even lower than those provided in the original bill introduced in the house by Mr. Underwood. When the bill comes up for general discussion on the floor of the senate, Smoot, of Utah, and La Follette, of Wisconsin, will introduce various amendments. The democratic poll would indicate, however, that the bill would be put through as finally decided upon in party caucus.

UNWISE and extravagant investments led to the closing of the second largest bank of Pittsburgh, last week, involving two smaller banks and several mercantile establishments. The chief stockholders of the bank are largely interested in water power and reclamation projects throughout the country, particularly in the West, and have extensive Carey Act land holdings in Idaho. These investments, together with the erection of a large and costly office building in Pittsburgh, exhausted the bank's resources and caused the government officials to step in and order the bank closed. Following upon the receivership proceedings against the Frisco railroad, there might be an idea in some quarters that the country was facing another near-panic such as was experienced six years ago. The fact is, however, that business conditions in general are quite good and are promising even better for the future. The country is prepared for the revision of the tariff which is promised, and the administration's currency bill, while opposed by many of the leading bankers, is relied upon to prevent a financial stringency and a recurrence of the 1907 crisis. The outlook for a bumper crop next fall and for a general quickening of business, along all lines, is excellent. The Frisco receivership and the Pittsburgh bank failure seem to have been the result of personal management (mismanagement, it is alleged in some quarters) rather than of general business conditions, and this will occur in even the most prosperous times.

THE long anticipated war between the Balkan allies is in progress, with reports already coming in of battles far more fiercely contested and with far greater loss than any which occurred when the allies were fighting the common enemy, the Turk. So far the Bulgarians appear to have the better of the conflict, having defeated the Servians with immense loss, although retreating before the Greeks. Refugees from the front declare that the battles are almost inhuman in their ferocity, the men throwing away their firearms and using their bayonets as daggers. With the Balkan allies thus at each other's throats, the Turk is preparing to take the field again, and, by taking advantage of the falling out among the allies, regain as much of his lost territory as possible. The big European powers have not as yet threatened any intervention, although it is almost inevitable that the struggle, if prolonged, will involve the larger nations so that a sanguinary war of long standing and great loss of life and money can hardly be prevented. The Balkan peninsula has long been the source of serious trouble to the big powers, each of the nations being jealous of the other and desirous of securing not only as much territory as possible, but the most desirable seaports.

EXPERT investigation of packing house conditions is to be made by three college professors selected by Secretary Houston, of the department of agriculture, last week. Dr. W. T. Sedgwick, professor of bacteriology and sanitary engineering in the Massachusetts Institute of Technology, is to investigate plants at Boston, Worcester and Brightwood, Mass., and New Haven, Conn.; Dr. V. A. Moore, professor of pathology of Cornell University, will go to Philadelphia, New York, Buffalo and Pittsburgh, and J. A. Conway, of the Missouri Agricultural College, to Kansas City, St. Louis and St. Joseph, Mo., and National Stock Yards, Illinois. "It is my desire," said the secretary in his address to experts, "that you report to me fully and frankly the conditions as you find them at the various packing establishments together with such recommendations looking to the improvement of the service as in your judgment may seem best." This investigation will supplement the work of the regular government inspectors, whose work has been criticised in some quarters. The result of the examination will be made public and will set at rest the rumors all too current in the country as to packing house conditions generally.

Coral Builders and the Bell System

In the depths of tropical seas the coral polyps are at work. They are nourished by the ocean, and they grow and multiply because they cannot help it.

Finally a coral island emerges from the ocean. It collects sand and seeds, until it becomes a fit home for birds, beasts and men.

In the same way the telephone system has grown, gradually at first, but steadily and irresistibly. It could not stop growing. To stop would mean disaster.

The Bell System, starting with a few scattered exchanges, was carried forward by an increasing public demand.

Each new connection disclosed a need for other new connections, and millions of dollars had to be poured into the business to provide the 7,500,000 telephones now connected.

And the end is not yet, for the growth of the Bell System is still irresistible, because the needs of the people will not be satisfied except by universal communication. The system is large because the country is large.

I've Done It Again!

¶ Yes, sir, I've done it again—I've corralled the pick of this year's "Turkey Hard" Seed Wheat crop. It's true-to name, genuine, native Turkey Hard Seed Wheat—seed that has reached the perfection limit of its development right here in the county where it was first raised in America.

¶ The most reliable growers of this famous grain are my friends. My lot is the very cream of their crops. I don't get it second-hand. I go right to the fields and personally select my

Turkey Hard Seed Wheat

¶ This is the wheat to plant for next year. This is the wheat whose amazing hardiness makes it a dry-weather-resisting record-breaker. This is the wheat whose lusty germinating properties I rigidly test before I ship a kernel of it. This is the wheat whose flinty kernel has that high percentage of gluten in it that makes more bread, that creates miller-and-baker demand, and that nets the grower of "Turkey Hard" 3 to 5 cents a bushel more money.

¶ This is the wheat I will send you a sample of right now, with my special price offer and full particulars, if you'll just let me hear from you. Write today.

Cartercar Company
Pontiac, Mich.

DR. HESS DIP And Disinfectant

is a preparation entirely harmless to man and beast.

Its sole office is to kill disease germs, correct impure conditions and destroy noxious insect life. It does these things whenever and wherever it is used according to directions. It meets the rigid requirement of the United States Government as an official dip for sheep scab. Its use on farm stock insures animal health and thus increases live-stock values. It is an unfailing purifier for foul sinks, drains, sewers and outbuildings. There is no certainty of profit in stock farming without its use.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

CANKER.

Last year my pigs had sores in and around their mouths which finally became lumps and seemed to be hard. I lost several with it, only one getting well that had it. Now I have some three-weeks-old pigs that are taking the same disease. All that are affected look poor and scrawny.

The disease is due to the bacillus necrophorus, a filth germ found in manure and in dirty stables. It is contagious. Clean up, disinfect and whitewash the stables, floors and all. Then see that clean, fresh bedding is used at all times. When pigs are born wash their heads and faces with a 1 per cent solution of coal tar disinfectant once daily for at least a week. Treat the disease as follows: Paint lumps daily with tincture of iodine after splitting open with a sharp knife and evacuating pus. Scrape each ulcer clean and lightly rub with a lunar caustic pencil; then swab all sores with a 2 per cent solution of permanganate of potash once or twice daily until healed.

LONG MILKING PERIOD.

Since my cow was put in the pasture the milk will separate when it is mixed with hot coffee, etc. She seems to be in good health and her teats are all good. She has been fed bran, sal-vet and tame hay mixed with some wild hay. The last time she had a calf was April 2, 1912, and she does not seem to be with calf now. Is the milk fit to use?

Such troubles are common where a cow has been giving milk for an extended period. Dry her off, as the milk is now unfit for use.

LAMENESS.

I have a five-year-old bay gelding weighing 850 pounds. He runs in the pasture during the day and is fed corn and clover hay twice a day in the barn. About two weeks ago I noticed him being very lame in the right shoulder. Now he is lame in both shoulders, though I can find no swelling. When he tries to trot he spreads his legs apart. Is in good flesh and all right other ways. Have given no treatment.

We must repeat that it is quite impossible for us to decide a case of mysterious lameness without making a personal examination, and even then it is often a difficult matter to locate the seat and cause of the trouble. It seems likely that the horse has been foundered and that the feet are the seat of the lameness. If so, we would clip the hair from the coronets of both fore feet and blister them several times, one at a time, with cerate of cantharides applied at intervals of two or three weeks. It would be best to have an examination made by a local graduate veterinarian.

SWOLLEN GLANDS.

We have a family horse about twenty years old. A few months ago we noticed two lumps about the size of a goose egg under his throat which seem to come and go from time to time and are quite hard. They do not seem to pain or inconvenience the horse, but we fear developments.

The glands swell and it is likely that irregularities of the teeth of the old horse are the cause. Have the teeth attended to by a veterinarian.

PANTING.

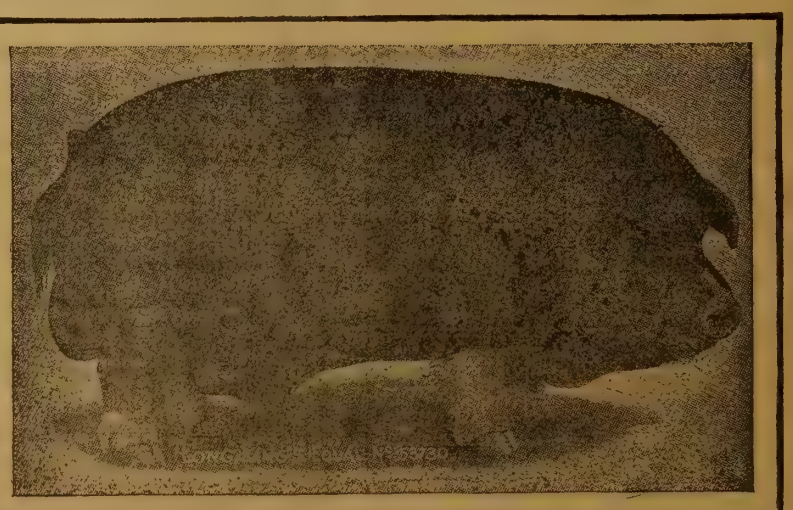
Have a four-year-old roan gelding that pants when doing the lightest kind of work. He has not been overheated that I know of. I feed him oats, corn and timothy hay.

Overheating is the usual cause of this condition and it is incurable in a majority of instances. Have the horse clipped and work him in the cool of the morning and afternoon. Do not feed any bulky feed at noon and do not work him soon after a meal. Omit corn from the ration in summer. Allow drinking water often when at work.

INDIGESTION.

A large four-year-old horse is troubled with his kidneys. He seems to be all right when not at work, but when we use him he takes sick on the road. We are feeding him good oats and Kansas upland hay. Were also feeding him alfalfa hay until about six weeks ago. Do you think that alfalfa hay would work on the kidneys? His appetite is good, but he seems sluggish on his feet. Have been giving him some rosin and black draft.

Alfalfa hay tends to stimulate the kidneys too much and especially so if moldy. Rosin and black draft should not be given. Have the horse's teeth attended to by a veterinarian. Allow free access to rock salt. In the feed of oats and wheat bran mix twice daily for ten days a tablespoonful of a mixture of equal parts of powdered gentian root, saltpeter, nux vomica, dried sulphate of iron and fenugreek; then skip ten days and repeat the medicine if needed.



The above is a likeness of that celebrated large-type Poland China boar, Long King's Equal (weight 1,000 pounds), at the head of the John B. Lawson herd at Clarinda, Iowa. He is one of the greatest Poland China boars living. Mr. Lawson is offering some splendid boar pig bargains by him on page 22.

Write Quick & Cut Out Shoveling in Hot Harvest!

EVERY blessed farmer who buys his Sandwich Elevator **before** harvest gets **double work out of it!** This summer, it will store his **small grain**—then crib his **corn** next fall. You, too, can get **double** value—you, too, can cut out the senseless slavery of shoveling load after load till you drop.

"The Sandwich Farm Elevator is the best investment I ever made in hard labor-saving machinery," writes Herman Frey, Melvin, Ia.—one of an army who say the same.

Sandwich (Eternal Cypress) Farm Elevator

Solves the **hired-man** problem and even lightens the **house-hold** work by cutting out the **keep**—the **expense**—of extra men. And it pays you a profit too!

"Had my crop picked 1c a bu. less on account of my elevator," says C. H. Keller, Marshall, Minn.

50 Bushels in 3 to 4 minutes

The Sandwich fills your bins—your cribs—**chuck to the top** lickety split! "Unloaded 50 bu. corn in 4 minutes," writes I. E. Orendorf, Heyworth, Ill. Others crib 40 bu. in 2½ minutes with the Sandwich.

No Leg-Breaking Platform

The Sandwich wagon-jack is **overhead.** "Works to perfection," says A. J. Anderson, Boone, Ia. You drive right under—with even (9) the **tallest** load. And it dumps it in the hopper in a jiffy. Then hitch on any power—horse or engine—and it's off with a flying start.

Cypress Body Outlasts Steel!

We make less money using "the wood eternal" but we make more **friends** and more **sales.** This is why it is called the **Everlasting** Sandwich and is fast crowding other elevators from the market.

Write Right Now for FREE Book

Last season we got **late** orders for 60 **carloads** we could not supply. These were from farmers who **waited.** They had to shovel. But they couldn't blame us. We warned **them** as we are **warning you now!** Our Elevator Book comes **free** by return mail the minute your request arrives; also the name of a Sandwich dealer close by. Address today 170 B St.

SAVING OUR GREATEST CROP.

(Continued from page 3.)

to the talk that drifted in, in snatches, of prizes won on hogs and horses, sheep and cattle and poultry," says the originator of the whole affair, "the same talk I had been hearing at every fair for ten years. Suddenly I became conscious of how often I had heard this talk about the wonderful improvement that had been made in the conditions of live stock in that length of time. Just at this minute, a woman with a fretful baby in her arms stopped near me to rest. A child of three clung to the mother's skirt with one hand and with the other fed herself a large, underripe banana. Three more brothers and sisters, old enough to care for themselves a little, clambered about, in imminent peril of broken necks and trampled toes. One might label the picture, I thought, an average American family on a holiday. As I looked at these children I saw myself and brothers and sisters forty years ago, no better, no worse. Measles, whooping cough and mumps would be a part of those children's upbringing, just as they had been of mine. If they lived through these necessary evils, without too great depletion of vitality, and if dread disease did not take them off, they might grow to manhood and womanhood. Then I began to calculate that this family would make five new families of the same kind, possibly with less endurance.

"A friend of mine interrupted the trend of my thought to invite me to go to the stock barns with her, where the premiums had just been awarded. The man in charge of the horse barns showed his beautiful animals, sleek and shining, with glowing pride. Blue ribbons and red ribbons showed bravely on many headsta ls. Every animal in the clean, well-ordered cattle and hog pens had been fed and groomed with the utmost care. A man pointed with pride to a pen of hogs and told us that they had been watched almost night and day; the water they drank had been analyzed, their food measured and weighed, and only the kinds given them that would bring certain results. It was then that the idea of a babies' health contest for our next state fair was born."

From such a little beginning has come the series of babies' health contests held during the past two years in a score of county and district fairs, in at least three state fairs, and now planned for a dozen state fairs in 1913, with a grand international contest in the Panama exposition, at San Francisco, in 1915. The little gray lady, the originator of the whole idea, Mrs. Mary T. Watts, of Audubon, Iowa, gives a list of the contests already held, as follows:

Iowa State Fair, 1911, fifty entries; 1912, 275.
Missouri State Fair, 1912, 200 entries.
Oregon State Fair, 1912, 200 entries.
Milwaukee Household Exhibit, 1912, eighty entries.
Fargo, N. D., Neighborhood Clubs, 1912, 150 entries.
Farmers' Week, Columbia, Mo., fifty entries.
Omaha, Made-in-Nebraska Show, 1913, 200 entries.
National Western Live Stock Show, Denver, 1913, 200 entries.

In addition to these, contests were held in county and district fairs, in 1912, in a score of Iowa towns, notably Ames, Audubon, Avoca, Algona, Brooklyn, Farmington, Marshalltown, Moravia and Sutherland.

State-wide contests are already scheduled for 1913 in Iowa, Oregon and Missouri (at the state fairs), with possibilities of Ohio, Massachusetts, Vermont and Michigan. Oregon has made appropriation for a Child's Welfare building and Denver proposes making more of a feature of the babies' health contest next January than it did this year, although the enthusiasm was so great at the last contest that a National Eugenics Society was organized at the live stock show, Mrs. Watts (the little gray lady) being elected president, Mrs. Mary Elizabeth Bates, of Denver, vice-president, and O. M. Plummer, of Portland, Oregon, secretary.

The manner of conducting the babies' health contests is interesting in the extreme and never fails to attract large numbers of applauding spectators. The entries are divided into classes, according to sex, age and residence, prizes being awarded for the most perfect entries in one-year-old, two-year-old and three-year-old classes, both from towns and country. The babies are subjected to tests, both physical and mental, by medical experts and trained nurses, who handle their little charges deftly so as not to unduly frighten them, but to observe them as nearly normal as possible. Stripped of their clothes the tots are measured, weighed and examined for physical defects; throat specialists examine for evidences of enlarged tonsils or adenoids; calipers are deftly swung around heads a-bloom with brown or golden tresses, in order

(Continued on page 16.)

JOHN DEERE
THE SAGLESS ELEVATOR

Your First Chance to Get a Sagless Steel Elevator

John Deere—The Sagless Elevator, is the first portable elevator to have turnbuckles on the truss rods so that you can keep the elevator from sagging.

You know how the power required increases when an elevator once starts to sag. Likewise, you know what a strain sagging throws on the whole elevator, especially the bearings in the head and boot sections.

The John Deere, for the sagless feature alone—even if it didn't have all those other things of advantage—is worth your careful consideration.

The Sagless Feature

Four turnbuckles on the truss rods, together with extra strong section connections make the John Deere a really sagless elevator. Sections are triple-lapped, connected with fourteen bolts, banded with a heavy iron band and reinforced at the upper edge on the inside. That is one big advantage in having a John Deere—The Sagless Elevator.

Screen Section

John Deere—The Sagless Elevator, separates and takes the shelled corn out when elevating ear corn. A screen, in the second section (that can be closed up when elevating shelled corn or small grain) does the work. Shelled corn that gets into the crib with ear corn fills up the air spaces and very often causes the corn to heat or mold.

What Else You Get

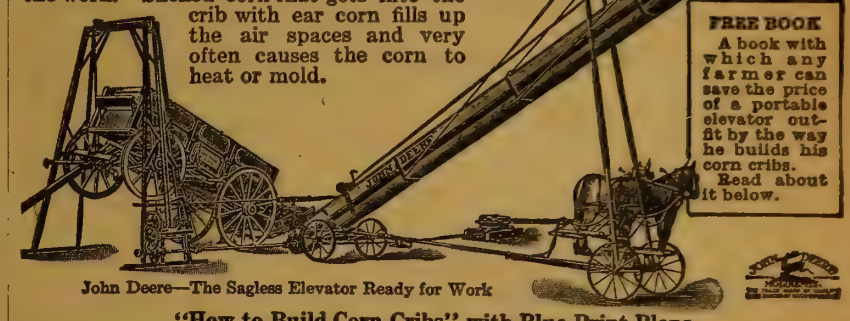
ALL STEEL—There is nothing about a John Deere—The Sagless Elevator to rot, dry out, or warp. It is made entirely of steel.

ROLLER BEARINGS on the head and boot shaft reduce the power required. They eliminate friction, thereby lengthening the life of the bearings.

HORSE OR ENGINE POWER. John Deere—The Sagless Elevator is furnished either with or without horse or engine power. A variable speed jack or belt attachment is furnished when desired to operate with engine.

MANY OTHER desirable features on John Deere Elevators are fully illustrated and discussed in the John Deere—The Sagless Elevator book. (This book also illustrates and describes the John Deere Cypress Wood Elevator and the John Deere Tubular Elevator for small grain—the only one of its kind.)

FREE BOOK
A book with which any farmer can save the price of a portable elevator outfit by the way he builds his corn cribs. Read about it below.



John Deere—The Sagless Elevator Ready for Work

"How to Build Corn Cribs" with Blue Print Plans

Besides containing complete descriptions of the John Deere—The Sagless Elevators, this book has ten blue print plans covering the construction of corn cribs and granaries, showing the style of elevator used with each crib. It also contains cost estimates and furnishes a source of valuable information whereby anyone can arrive at the comparative cost of the various styles of cribs and granaries. You can get it free if you will ask for book No. A 27

John Deere Plow Co., Moline, Illinois

Ertel's Cyclone—3-Stroke Self-Feed Hay Press Bales with least labor

WILL BALE 20 TONS OR MORE A DAY AT COST OF ONLY 40c A TON.

Make big money baling for your neighbors after yours is done.

The Cyclone is powerful, durable, repair-proof—made almost entirely of finest steel. Unbreakable steel baling chamber, adjustable tension, makes smooth, clean, tight bales, 75 to 125 lbs. as desired. Three strokes each circle. Self-feed. Works at stack, barn or windrow.

Here's the biggest money maker you can buy. Low price. Free trial and absolute guarantee on every press. Write today—full information free.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

THE BUTTER, CHEESE AND MILK INDUSTRY.

Statistics in detail of the butter, cheese, and condensed milk industry in the United States for the year 1909, are presented in a bulletin soon to be issued by Director Harris, of the bureau of the census, department of commerce. It was prepared under the supervision of W. M. Steuart, chief statistician for manufactures.

Of the 8,479 establishments engaged in the industry in the United States in 1909, 56.4 per cent reported butter as their product of chief value, 42 per cent cheese, and 1.6 per cent condensed milk. Of the total value of products shown for the combined industry the butter factories contributed $194,999,198, or 71 per cent; the cheese factories $44,263,177, or 16.1 per cent; and the condensed milk factories $35,295,343, or 12.9 per cent.

In this industry the cost of materials constitutes a very large proportion of the total value of products, the process of manufacture being relatively simple and inexpensive. The cost of the materials used in 1909 was $235,546,064, forming 85.8 per cent of the value of products, while the value added by manufacture (that is, the value of products less the cost of materials) was only $39,011,654. The factories of the industry gave employment to an average of 31,506 persons during 1909, and paid out in salaries and wages a total of $14,671,932. Of the persons engaged in the industry, 18,431 were wage earners, 5,056 were salaried employees, and 8,019 were proprietors and firm members.

The average number of persons engaged in the industry in 1909 was 31,506, of whom 19,380 were reported by the butter factories, 7,164 by the cheese factories, and 4,962 by the condensed milk factories. Of the total number of persons engaged in the combined industry, 18,431, or 58.5 per cent, were wage earners; 10,480, or 33.3 per cent, were proprietors and officials; and 2,595, or 8.2 per cent, were clerks and other subordinate salaried employees. Of the total number, 29,095, or 92.3 per cent, were males, and 2,411, or 7.7 per cent, females.

The average number of female wage earners in 1909 was 1,420, of whom 987, or 69.5 per cent, were in the condensed milk factories. Females formed 23.7 per cent of the total number of wage earners in this branch of the industry, as compared with 3.2 per cent in the butter factories and 2.2 per cent in the cheese factories.

In 1909 the combined production of butter in the factories of the butter, cheese, and condensed milk industry and on farms, in the United States, amounted to 1,619,415,263 pounds, an increase of 127,662,661 pounds or 8.6 per cent over the production in 1899. During the decade the output of the factories increased 204,638,107 pounds, or 48.7 per cent, and the production on farms decreased 76,975,446 pounds, or 7.2 per cent. At both censuses the production of butter on farms greatly exceeded the factory output, but the proportion which it formed of the combined total decreased from 71.8 per cent in 1899 to 61.4 per cent in 1909.

The quantity of cheese produced in the United States in the factories of the industry and on farms during 1909 amounted to 320,532,181 pounds, an increase of 22,187,539 pounds, or 7.4 per cent, over the production in 1899. The production in the factories engaged in the industry increased 29,153,993 pounds, or 10.3 per cent, between 1899 and 1909, and the production on farms decreased 6,966,454 pounds, or 42.6 per cent. At both censuses the quantity made in factories was many times greater than the quantity made on farms, and the proportion which it formed of the combined total increased from 94.5 per cent in 1899 to 97.1 per cent in 1909.

In 1909 Wisconsin was the most important state in the combined industry as measured by value of products, having displaced New York, which had previously ranked first. In average number of wage earners and value added by manufacture, however, New York still held first place in 1909 and Wisconsin ranked second, but the per-

The Concrete Milk House Is Clean and Sanitary

You cannot keep your milk fresh and sweet in an unsanitary milk house. Wooden floors and walls become milk soaked; decaying wood construction is a breeding place for germs. Many health officials require concrete floors in all milk houses. Build your milk house of concrete and use

UNIVERSAL PORTLAND CEMENT

Such a structure has no cracks or crevices to collect dirt. It is cool in hot weather; warm in cold weather. A concrete milk house is not difficult to construct, and when completed requires no painting or repairs. Universal Portland Cement is of uniform high quality—sound and durable.

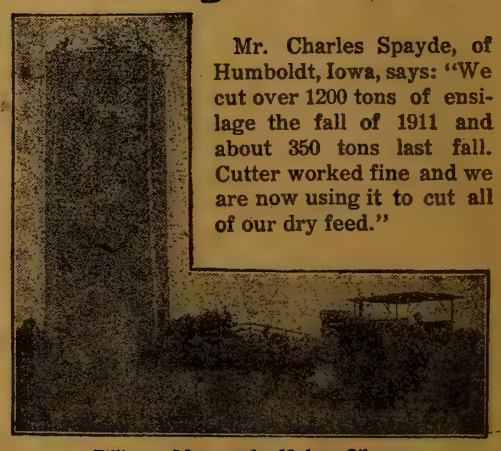
See the Smalley Cutter In Action!

If you want to see a real *show*, just watch this Powerful Smalley "cut up." See it take fodder by the ton and cut it into small, fine pieces, shoot it into a giant silo 60 feet high. Some *improvement* over the old slat-apron Cutter that requires an army of workmen to feed it, and balks when it comes to filling a *tall* silo.

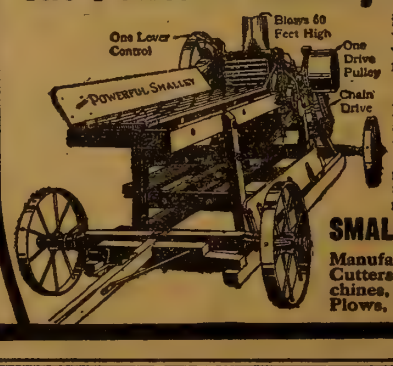
Four-fifths of all Silos are now filled by Smalley machines.



Mr. Charles Spayde, of Humboldt, Iowa, says: "We cut over 1200 tons of ensilage the fall of 1911 and about 350 tons last fall. Cutter worked fine and we are now using it to cut all of our dry feed."

Filling a Mammoth, 60-foot Silo on George Crow's Farm, near Hutchinson, Kas.

The Powerful Smalley Force-Feed Silage Cutter



is a regular "hawg" for work. Makes no difference whether you have green or dry ensilage—or whether it's corn, oats, peas or alfalfa. Now furnished with Alfalfa Grinding Screen if wanted (for making alfalfa meal).

Only one drive pulley on Blower outfits. No Idler to bother with. Ten per cent steel guaranteed in all foundry castings. No oiling by hand—hard oil cups on all important bearings.

Get a post card quick and send for Smalley's new big illustrated Catalog. Finest Silage Cutter Book ever printed, yet absolutely free. Write now for it.

AMERICAN JERSEY CATTLE CLUB, 324 W. 23d St., N.Y.

centages of increase for the decade in these items, as well as in the value of products, were less for New York than for Wisconsin. Iowa ranked third as regards value of products in 1909. Minnesota which shows an increase of 96.5 per cent in value of products for the five-year period, advanced from fifth place in 1904 to fourth in 1909, having exchanged positions with Illinois, which shows a gain of only 34.1 per cent for this period.

Among the thirteen states which reported products for 1909 valued at more than $5,000,000 these show very large percentages of increase for the decade 1899-1909: Washington (511), Michigan (264.6), California (256.2), Nebraska (240.8), Minnesota (198.2), Wisconsin (167.6), and Ohio (154.4). Much higher percentages are shown for a number of other states, most of which, however, reported only a small proportion of the total value of products even in 1909. The states showing the highest percentages of increase were North Dakota (743.4), Oregon (670), Idaho (662.1), and Missouri (585).

GREEN FEED FOR WINTER.

To the Editor of The Homestead:

The man who is keeping cows for milk and butter must now make preparations for laying in his green feed if it is to be done this year. Those who raise beets, pumpkins, turnips and mangels must plant them, in order for them to mature before freezing weather. Those who have silos, must begin to think of filling them before long.

Mangels and beets were grown largely for winter cow feed, before silos became so general and popular with dairymen. They are grown to some extent now, and should be grown more by those who have no silos. For green winter feed for cows, mangels have proved to be the best of the root crops, both for dairy and for beef purposes. They are easy to harvest and store and will produce an enormous yield when planted on well fertilized soil.

Best results are obtained with mangels when fed as a half substitute with grain and other concentrated feed stuffs. When fed alone, the flow of milk is almost as good, but the richness below the average. Mangels may be grown and cultivated on a small space, and their cultivation and harvesting may be done at times when the work will not seriously interfere with other crops.

Tests have been made that feeding corn silage is not only better than feeding root crops, but that it can be more cheaply raised. On a large farm, where dairying is to be continued for some time, the building of a silo, and the production of enough corn to fill it is the cheapest way of securing good winter feed for the cows.

IOWA WEATHER AND CROP BULLETIN.

The following climate and crop bulletin is issued by the Iowa Weather and Crop service from the central station at Des Moines, for the week ending July 13, 1913:

One more week of favorable weather has been added to this auspicious mid-crop season. The temperature was about normal, and cooler than the two preceding weeks. Showers were general on Friday except over the extreme southeastern counties, and the amounts of rainfall exceeded an inch in many localities. Rapid progress was made in haying and harvesting. Clover hay is exceptionally heavy and timothy is fair to good. Much winter wheat, rye, early oats and barley are in shock, and threshing has begun in southern counties. Late oats are beginning to ripen and will be ready to cut in a week or ten days. Winter wheat is a good crop, but the yield will not be as great as last year. The showers were of great benefit to corn, pastures, late potatoes and garden truck, but more rain is needed for corn, which is beginning to tassel and will require plenty of moisture to produce heavy earing. Apples continue to drop badly.

Geo. M. Chappel, Sec. Dir.

A pheasant with a single toss of its bill kills more insects than a turkey gobbler will eat at a whole meal. Too, the gobbler eats his insects after they have gotten fat eating the crop, the pheasant eats his when they are still in the egg and before they have taken a bite.

HOT WEATHER
the Ideal Time to Use a
DE LAVAL
CREAM SEPARATOR

THERE is no time when the use of the DE LAVAL Cream Separator is so indispensable to the profitable production of cream or butter as during the hot weather of midsummer.

The use of the separator at this season usually means the difference between a profit and a loss in dairying. It accomplishes a great saving of butter-fat that goes to waste with any other method of separation and enables the production of a higher quality of cream and butter-fat than is otherwise possible.

Moreover with a DE LAVAL the advantages over other cream separators are greatest at this season because the separation is more complete and the cream heavier and more even in texture. The machines turn more easily and the capacity is greater, getting the work through more quickly.

If you haven't a separator you can scarcely afford to defer the purchase of a DE LAVAL, or if you have a separator which is not doing satisfactory work there is no better time to discard it in favor of a DE LAVAL, first trying the machines side by side for your own satisfaction, which every DE LAVAL agent will be glad to give you the opportunity to do.

See the nearest DE LAVAL agent **at once** or if you do not know him write us direct for any desired information.

HOLSTEIN CATTLE.

Pure-bred Registered
HOLSTEIN CATTLE

Not many years ago 16 lbs. of fat in 7 days was considered a very creditable yield for full aged cows and many a breeder, looking for a bull to head his herd, resolved to consider only such animals as could show a dam with this record or better.

Today 16 lbs. of fat is the mark aimed at by Holstein breeders for their two-year-old heifers and many surpass it.

This progress shows what intelligent selection and breeding will do and ought to prove an incentive to the farmer to improve his own herd.

WHITE DIARRHOEA.

To the Editor of The Homestead:

Mrs. C. M. Hiney, one of our Ohio subscribers, makes the following inquiry:

When my chicks are four days old their plumage gets rough and they cry all the time. They eat and drink as if starved and die in a short time. I have used several makes of good incubators, some hot water and some of them hot air machines. Have tried keeping incubators closed until the hatch was over and have tried taking them from the machine, and all with no good result. They get weaker and weaker and smaller, and then fall over dead in from four days to four weeks. Have fed chicken feed, hard-boiled eggs and toasted bread. Tried giving them water three times a day and then gave them water all the time. I get splendid hatches—194 chicks from 257 eggs. We lost 1,000 chicks last year and two hatches this season. I wrote to another paper—a poultry journal—but never got a reply. I am discouraged and will be thankful for any help.

It is small wonder that our correspondent is discouraged. To see a fine lot of bright, vigorous appearing baby chicks, seemingly in the very best of health, begin one by one to droop, then as our inquirer says, "grow smaller and smaller" and sooner or later "fall over dead" causes one to wonder if it would not be more profitable to quit the chicken business and raise onions.

The first experience we had was about ten years ago and since that time the country has lost thousands and thousands of chicks from this dreadful disease. It is known by several different names such as "white diarrhoea," "going light," "little chicken cholera," besides a half dozen, long, dry scientific names. No difference what called, it is the same dreadful disease and well-nigh impossible to combat.

Several experiment stations have investigated this disease with no result, only that it is caused by bacteria. It seems to spread in every neighborhood where large numbers of fowls are raised, and incubator chicks are much more susceptible than those hatched under a hen. Not only is the trouble contagious through contact; the bacteria has been found in the ovaries of the hens and in the yolks of eggs.

Dr. Stanley A. Merkle says that among many predisposing causes may be mentioned: lack of sufficient heat, impaired vitality in the breeding stock, foul water and air, musty feed, lack of grit, too much grit, unabsorbed yolk and indigestion; all or any one of which may cause acid diathesis or an excessive acidity in the system of the chick.

As an illustration Dr. Merkle says that if 100 healthy, vigorous chicks are placed in a brooder and subjected to excessive heat for twenty-four hours, or given unclean water, subjected to a sudden chill or required to breathe a poisonous gas or eat musty feed, they would develop the dreadful disease in from twenty-four to forty-eight hours. Anything which interferes with the proper functioning of the organs of nutrition or elimination is a direct factor of the cause of acid in the system.

Fresh air, or oxygen, is a great specific for acid in the system, and too much, rather than too little, air when in the process of incubation should be given. It is unsafe to open the incubator when the eggs are hatching, neither is the average incubator so ventilated as to allow the gases to escape. This gas is unquestionably harmful. There is yet much to be learned, both as to making and running an incubator. It is very plausible that the trouble originated in machine hatched chicks, and once started has rapidly spread.

Little or nothing can be done for the afflicted flock. We have seen a few instances where afflicted chickens pulled through and they were stunted, lacking in vitality and predisposed to every ill that fowls are heir to. They are a menace to the poultry keeper. Prevention is the only hope and that is not always effective. Begin with the poultry buildings and yards. Rake and burn all litter and spray every inch with a strong disinfectant, then give the incubators and brooders vigorous attention. Scrub inside with hot soap suds and follow up with an antiseptic wash; a coal tar solution is good, though it is safe to use anything of this sort which your dealer happens to keep if the machines are left open until the fumes evaporate.

Next give the eggs to be incubated your attention. A cloth dampened—not saturated—with alcohol should be used to wipe each egg. If followed, this disinfecting business will get rid of the trouble so far as outside conditions are concerned. If, as it is believed, the bacteria is in the egg there is small chance for the chick to escape. It is the old story of prevention rather than cure.

I know one extensive breeder who has religiously disinfected year after year, who has never had a chick sick from this disease. He is simply precautious and the trouble has never developed in his flock.

Minnie G. Stearns.

LOSS-OFF IN SUMMER.

To the Editor of The Homestead:

After the breeding season is over our time and attention is so engrossed in caring for the growing youngsters that the flock suffers neglect. This very thing happened in our business year after year. One night in June when only one dozen eggs were found from nearly 100 hens we did some good, hard thinking and next morning got busy.

The place was raided for delinquent hens. We found them everywhere—in the shrubbery, in the granaries, under cribs and worse yet, some of them under the horse troughs, all fondly expecting to hatch chicks. They were rounded up and placed in a roomy, shady yard. Not a very promising lot surely, mad as hornets, clucking and fighting for dear life, they certainly did not inspire confidence.

Those hens were given what they would eat of everything on the farm. A little corn, oats, table scraps, milk both sweet and sour, clover fresh from the meadow and occasionally a stalk of green corn pulled from the field, all of which they greedily ate. With a spade I dug a fresh place for them to wallow every day, gave them grit and crushed shells and raked and burned the litter in the yard for charcoal.

You may talk about hens being slow to lay out of the natural season, and to some extent this is true, but if rightly fed and cared for a hen hasn't so very much to say about whether she produces eggs or not; it is almost wholly up to her keeper.

These hens were never neglected and produced a large per cent of eggs until December. If one of them became broody she was put out on the range and if a hen on the range was found clucking, into the yard she went where she soon forgot it. They went through the molt with little or no falling off in egg production. The loss of feathers was so gradual as to hardly be noticed. This extra care gave us more profit than three times that number at range on the farm.

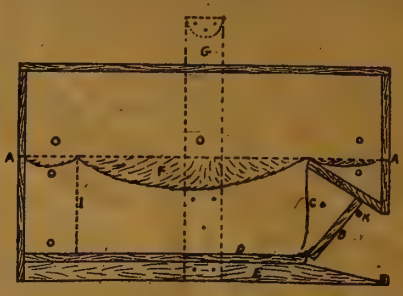
A GOOD CHEAP HOMEMADE HOVER.

To the Editor of The Homestead:

An inexpensive hover for rearing chicks without a brooder or mother hen can be made from an ordinary cracker box. It is easily constructed and will take care of twenty-five to forty chicks from three to five weeks. The cracker box is sawed around five inches from the bottom as shown at line A-A in accompanying diagram. The bottom of the box becomes the cover of the hover which is made of the seven-inch rim. You will notice the cracker box is inverted in the completed hover. To fit this seven-inch rim in the hover saw an opening in one end four inches square as shown at L. Nail two strips one inch wide and slanted to a point (E) on bottom inside edge of sides, and nail in a half-inch floor extending from the back to where the slant begins, four inches from the front (D). Hinge a four-inch



strip dressed until it will fit and work smoothly to this floor (B). Nail a four-inch strip (H) so it will extend from the top of entrance back and up just so the strip (B) will touch it when in position shown. Bore a quarter-inch hole and fit a peg in it at K to hold B in place when raised Tack a strip of cloth, as shown by C, to H so it will hang almost to the floor and cut from bottom almost to the top into two-inch strips so the chicks will readily pass through them. Nail a two-inch strip (G) three or four inches longer than the height of the cracker box, to each side of the box and cut a piece of broomstick or half round a little longer than the width of the box, which when fastened between the ends of these upright sticks serves as a handle to carry the hover. This handle being longer presses the sides out a little so the cover will slip into place easily. Nail strips of cloth across the two back corners as shown at dotted line I and bore several half-inch holes behind them, also one or two between the door B and the curtain C. The cover is prepared by tacking a soft cloth (F) to the bottom of it where it was sawed and boring several holes in the side for ventilation. Tack the cloth on loose so it will hang down considerable.

L. H. Cobb.

WITH THE EDITOR.

An observant country school-teacher once made the remark that saving on the farm was apt to be a one-sided proposition, that he sometimes wondered that the wife kept on patching and mending while the husband allowed good machinery to go to waste for lack of proper care.

A man can save just as much out of doors, sometimes a good deal more, than can a woman indoors; and if it be her duty to patch the family clothing, make over the old carpets, make dish towels of flour sacks and practice a thousand economies it is no less his duty to patch holes in the granary, repair harness and machinery and take pains to so house implements that they are not ravaged by the weather.

An exchange remarks that one often sees a harness tied together with baling wire or cord by a man who would raise "Hail Columbia" if his wife put a conspicuous patch on his trousers. He expects her to have the proper materials for patching and to do the work in a workmanlike manner. Why one rule for her and a different one for himself?

It is this sort of thing which makes many a woman a "nagger." She is expected to make the most of everything, to save every possible penny by making one do the work of two, and by doing without things she wants and really needs; if she sees carelessness and waste out of doors, if she is conscious of the fact that carefulness and economy and doing without are confined to her side of the house, it is but natural that she would remark upon it. If things keep on in the old way, if there is no change, she keeps on remarking upon it, her temper becomes "riled," her tongue grows sharp and her voice irritable, and her husband straightway accuses her of "everlastingly finding fault about something." A hard-working, good-tempered woman's disposition has been soured and a home made miserable. Whose is the fault? At whose door lies the blame? And how shall the situation be remedied?

H--S W-G--R

Can you fill in the blanks above and complete a well known baseball players name? You can if you try. Just write and tell me whose name it is and I will tell you how you can get the fine complete baseball outfit pictured below.

There are seven splendid pieces in this great outfit. The ash bat is a good one. The mask is made of heavy wire, full size. The catcher's mitt is thickly padded, very heavy and has patented-fastener. The glove is of tanned leather and has patent clasp. The ball is strongly stitched and will last. A neat, adjustable belt and a dandy cap complete this great outfit. Remember you get the whole outfit of seven pieces for a little easy work. Write me today and I will tell you just how to get it.

A. M. PIPER, 840 Popular Bldg., Des Moines, Ia.

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

If I can live
To make some pale face brighter, and to give
A second luster to some tear-stained eye
Or e'en impart
One throb of comfort to an aching heart,
Or cheer some wayworn soul in passing by;
If I can lend
A strong hand to the fallen, or defend
The right against a single envious strain—
My life, though bare
Perhaps, of much that seemeth dear and fair
To us of earth will not have been in vain.

In many of the older farm houses there is no dining room and the kitchen with its big fire is a most uncomfortable place in which to eat in hot weather. One of the most convenient substitutes for a dining room is a screened-in back porch. There is generally one or two windows from the kitchen opening onto the porch. Hang the window screens like a door and put up a stout shelf on both the kitchen and the porch side. Food may then be set through without extra steps. One ingenious woman with a window whose light could well be spared, took out the lower window sash, and substituted for it a screen covered with oilcloth. This screen opened on the porch. In the kitchen she placed an old cupboard, from which the back had been removed over the opening made by the window. This was accessible from both sides and held all the dishes required for the table. The table should be covered neatly with white oilcloth tacked down, as a cloth which blows about by the wind is never advisable.

CANNING HINTS.

For all simple canned fruits it is best to make a sirup of sugar and water, varying the sweetness to suit different fruits. When this sirup has boiled about two minutes, drop in the fruit. Thorough scalding of berries is all that is necessary. The fruit thus canned is whole and of good color. A can is seldom lost.

Surplus juice with a distinctive flavor may be canned and put away until some later fruit ripens. The juices may then be mixed and made into jelly, or it is an excellent addition to mincemeat, for flavoring and coloring pudding sauces, for tapiocas, etc. The sick person will find the juices of peaches, apples, raspberries, blackberries, strawberries and barberries a very refreshing drink.

The largest amount of spoiled fruit is due to the jars and covers not being thoroughly sterilized. Before using, the clean jars should be put on in enough cold water to cover them and boil for ten minutes; then they are sterilized. They should be lifted from this hot water just as they are needed. The importance of tight lids and new rubbers cannot be overestimated. Only new rubbers should be used and they should be dipped into hot water before being placed on the jar.

There are a number of little contrivances that may be bought for a trifle or even made at home that are great labor savers when canning fruit. Parers and corers for peaches, pears and apples may be bought cheaply. The best paring knife is a good pocket-knife with the butt of the blade wrapped to protect the hand and prevent cramping; the short kitchen knives are also useful and may be bought for five or ten cents each. The jar filler is one of the most useful helps. It is not merely a funnel, but screws onto the Mason jars like a lid, and does not allow the liquid to come in contact with the rubbers.

AMONG OURSELVES.

Dear warm friends, keep cool, I beg of you; don't let your bodily thermometer rise to the boiling or even scolding point as you look over the accompanying picture of farm life. I enjoin you to have a hearty laugh, and to bring from memory's picture gallery some scene on the farm where toil, surprise and a round of hearty laughter were part of the day's work. Enjoy reading:

As the ever-looked-for farm journal of ours makes its weekly visit, it reminds me of days gone by when I used to write for the Home Department. We had a houseful of children on the farm in those days. Now all is changed, our boys have gone for themselves and our youngest and only daughter was married recently to a law student at Harvard College and now Massachusetts claims her. My John and I are alone in a village. Though very busy am I, yet my mind travels back to days gone by and one very vivid picture on the old homestead I see. At that time our neighbors were putting up dinner bells in their barns and windmill towers and, of course, we had one, too. "Why, yes," folks said, "so handy to call men folks to dinner. Besides, if any accident should happen, sudden sickness, or a fire, one could ring the bell out of meal time hours and fetch men folks from the field and arouse the neighbors, too." One day when our bell was quite new our hired girl informed me that the hogs were out. Now, this girl was fleshy, hence could not run very well and I had an infant in my arms, therefore I said, "Ring the bell," and she did ring the bell as if the house was on fire and did not let up till I called to her to stop. My husband, the hired men and the boys fairly flew from the fields. Some were so exhausted that they sat down to rest, while others set out to drive some thirty or forty half-fledged black hogs into the hog yard the other side of the barn. But those pigs had no notion of going in. They set out across the fields to the road. Finally, all but one of the men went in pursuit—even the hired girl went. On went the hogs, on went the pursuers. The pigs foamed at the mouth and some could hardly go longer and one after another of the pursuers gave up and sat down to rest, as the weather was very warm. Finally the men headed in a few hogs toward the house and called out to open the hog yard gate, for, as all well know, a hog won't go in the hole he got out of. One ran to open the gate, but returned shouting, "Our hogs are in the yard. Those are our neighbors' hogs!" The ejaculations that followed can easier be imagined than described. Of course, that dinner bell was to blame. Now, I'll tell you, dinner bells are all right on the farm, though I don't suppose they are used much now. Men folks carry watches instead and the telephone can be used to call up neighbors in case of emergency. Yet if one has a bell it is well to have certain signals, such as a few dings for things not serious, and a lively ring in case of fire.

How our sides shake as we picture the whole scene! Haven't you some such an experience to tell about? This is a good time of year to have a hearty laugh. Let's have another!

"Problems" used to bother us at school, but our problems of today tax our ingenuity and resourcefulness to just as great a degree. How to save strength, to save steps, to accomplish in one hour what used to take two. Big life problems. So we are glad that Patreca passes on to her sisters how she has made the washing problem easier:

Having been a reader of this paper for a number of years and having derived so much benefit from the suggestions of the different friends, I will tell how I do my washings. For a number of years washing had been a heavy burden to me where I washed them all through the machine, boiled them, then washed them through the machine the second time, rinsed them, etc. So I decided to heat a large dish pan of water the evening before washing, cut up one-half bar of soap and dissolve in this hot water, put all the white clothes in one tub, all the colored in another, pump up two or more buckets of cold water for each tub of clothes and into the cold water put hot, soapy water. Then in the morning I put on boiler, fill with water, into this I cut one bar of soap and one cup of "washing fluid," made of one can of lye, one ounce of salts tartar, one ounce of salts of ammonia, one ounce of borax, five quarts of boiling water, let dissolve and put in bottles for future use. Then I wring out white clothes cleanest first, put on to boil, when all are boiled I wash them through the machine, rinse, starch and hang out to dry. While I am waiting for white clothes to boil I wring out the colored clothes and the men's

HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

shirts, hose and other badly soiled articles I rub on the board, soap and then they are ready for the machine when the white clothes are washed out. I think this is a great improvement on the old way. My clothes are always clean and extremely white and it is surprising what a lot of dirt comes out in the water in which they are soaked. Put a small pinch of borax in the starch. It helps to whiten the clothes and makes the starch stay in the clothes longer. Then I use one of the new gasoline irons which I find such a help through the hot weather. It can be regulated for fine or coarse clothes and one can iron in any part of the house or out of doors.

It's pleasant to have story tellers in our group of friends and here is a mother who with her babies beside her gives us another kind of "Farm Picture" which she calls

DREAM MEMORIES.

I woke just now from a happy dream.
The dream I had was this:
A dream of soft caresses
From the hands I used to kiss;
And dimpled baby fingers
Touched my face and smoothed my hair;
I heard their pattering footsteps
In the hall and on the stair
And laughing baby faces
Played at hide and seek with me,
And eager childish voices begged for stories, "one, two, free."
The youngest tries to make believe
My knee a noble steed
And he will ride to Bamburycross
Before he stops to feed.
And then he cries, "Now sing 'Boy Blue!'"
And baby's fast asleep,
The rest are all clamoring
To hear about "Bo Peep."
It's quiet now, and nurse has tucked in tight each curly head.
The toys have all been put away,
The babies are in bed,
And I—I sit and dream the years away
And play it's true
That I've just finished singing,
To my little ones, "Boy Blue."

Tender and sweet is the cradle picture on the farm, and we quietly thank Mrs. E. C. T. for calling up our own "dream memories;" or for giving us a foretaste of the tender things of the years to come.

For those who enjoy good, wholesome graham bread, Mrs. E. J. Popplewell sends one of her tried and proven recipes:

Take three tablespoonfuls of good soft yeast, mix three pounds each of graham and white flour, make into a sponge with one and one-half pints of warm water; let this rise; when well risen, add one and one-half pints more of warm water, one-half cup of New Orleans or sorghum molasses and sufficient flour to knead soft; allow it to rise in a mass, then mold, place in pans, let rise and bake. I always stir my graham with a spoon until the last kneading, then make it very soft. New milk scalded and cooled is as good as water.

THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Aunt Mary, Hawley, Minn.

MAKING MONEY BY TRAPPING.

(First prize.)

I will attempt to tell you how I make my money in trapping fur-bearing animals in winter. About the first of November I start to catch, and quit about the last of March. I have good luck in trapping, especially in skunks and civets. I catch my skunks and civets in the pasture in old badger holes. Best way to catch a skunk or civet is to take two big logs and put them about five or six inches apart and a trap on each end, so when skunks or civets pass by either end they will get caught. And in the morning I go there at about one o'clock and have two big skunks or civets. I shoot the shunks with my 22-caliber repeating rifle. Last year's crop was fine. I caught twenty civet cats, and sold them at thirty-five and fifty cents apiece; nine narrow-striped skunks and sold them at $2.50 apiece; and ten broad-striped skunks and sold them for $2 apiece.

—Expert Trapper.

Jessie.

(Second prize.)

Jessie is the name of a little lamb. We brought her up by hand. We give it milk twice a day from a bottle.

When she is very hungry she cries until we give her something. She will eat dry bread.

The garden gate is about two and one-half feet high. While we are not looking she quickly jumps across. One time she got in and ate half of the row of peas. If we chase her she runs so fast that we cannot catch her. She is a full-blooded Shropshire. Her wool is very thick, and she is always

JESSIE AND THE SHEPHERDESS.

hot in summer. Papa has thirty-eight little lambs. —The Shepherdess.

Get The Habit.

(Third prize.)

"If I had only learned it when I was young," is a sentence uttered by many. Children, are you learning all you can in your youth? If an opportunity presents itself make the very best you can of it, for it will never appear again.

Not only should you learn to be a scholar, but learn good habits. Habits form your character, and when formed in youth cannot well be abandoned.

For instance, if a child is taught to say "Please," "Thank you," "No, ma'am," and "Yes, ma'am," they will always say it. Also acquire the habit of treating rich and poor alike. If you have a chance to say a kind word to the poor, don't hesitate because someone is with you who would laugh. Also learn to be cheerful and don't pout, because it will make a very bad disposition.

—Mischief Maker, age 12.

The Kind Robin.

A week or two ago one of our friends put up a box for the wrens. Now most people think that the different kinds of birds are not friends, but this proves that they are. Two sparrows decided to build their nest there and the wrens decided to build there, too. They had a fight, and the wren was pecked until it was nearly dead. A robin came to help the wren, but the sparrows flew away, so the robin stayed by the wren until it revived. —Cricket, age 10.

PLEASANT FIELDS OF HOLY WRIT
Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON
3d Quar. Lesson 3, Ex. 3, 1-4, 20; July 20, 1913.

MOSES CALLED TO DELIVER ISRAEL—THE STORY.

After an absence of four centuries the sign of Divine presence blazes out once more. Its last appearance was the "lamp of fire" which swung low between the fragments of Abraham's dismembered sacrifice. The ineffable voice heard last by Jacob at Beer-Moses knew Egypt, not the mere "lay of the land," but Egypt's language, literature, law, custom. He knew his fellow countrymen, their strength and weakness. He was familiar with every inch of the Sinaitic Peninsula, from point to point of which he was to lead the emancipated nation for forty years. But this knowledge, after all, was merely incidental. Moses' real qualification was his religiousness. Is it too much to believe that it was this which led him to the sanctuary of the desert in very hopes that there Jehovah would break his silence and communicate his will? The prepared message came then as ever to the prepared mind. Never was more striking illustration of the Divine affirmation, "My strength is made perfect in weakness." Consciousness of his personal inadequacy to the tremendous task of freeing a wholly dispirited people from the most invincible despotism, drove to implicit obedience and trust in Jehovah. Forty years of exile, too, had inured him to trying vicissitudes, and made him "much enduring (meek) above all men." He was a graduate thoroughly equipped from God's school of adversity. His wonder-working rod was his diploma. As a few months later, in this very mount, his face toward Canaan and three million liberated serfs at his back, he prayed, "If thy presence go not with, carry us not up hence," so now, with his face toward Egypt and his mighty task clearly outlined before him, he invoked the Divine presence, and there came the assuring response, "Certainly I will be with thee." Enough! Pharaoh and all his serried legions are as the exceeding fine dust of the balance.

A HOUSEWIFE'S RELIEF AT THRESHING TIME.

To the Editor of The Homestead:

The article appearing under the above title in a recent issue of your paper was rather startling. I fail to see any relief from work in having to put up three lunches every day of the threshing season as compared with cooking for threshers one day, as this would necessitate baking every day for three or more weeks. Besides I do not think this would be treating the men right and I hope this system will never strike Iowa's broad-minded women.

There is no harder work on the farm than threshing. Then why should we make it worse by giving the men cold dinners and letting them go home late to a heavy supper and then to bed? There is no comparison between the farmer and the city man who eats a late breakfast, takes his lunch because he cannot get home and quits at six to go home to dinner and then rests as he chooses until bedtime. The farmer who eats an early breakfast, needs a good, warm dinner. In threshing time he never gets his supper until seven o'clock and if this is the heavy meal of the day how can he expect to rest well, retiring soon after?

I have a husband and two sons and be assured that I will never treat my men that way, sending them away with a cold lunch. If others adopt that plan my men can come home to a warm dinner and the threshing can wait until they get back, thus losing lots of valuable time.

My men say they will never take a dinner pail to a threshing. So far as we women are concerned we exchange work with each other and have lots of fun helping cook. Treat threshers like they were human beings, not machines and give them a dinner of good, sensible cooking. Mrs. E. E. Howe.

Clarke county, Iowa.

The egg production of the republic in 1912 was 1,750,000,000 dozen, as compared with 450,000,000 dozen in 1880. The exports of last year—19,000,000—were almost as great as the entire output of thirty-five years ago.

LANDS AND HOMES

Carey Act Land Opening

Beginning August 7, 1913. 3,600 acres in Bear River Valley, Utah. Low price, easy terms and long time. Also 9,000 acres of deeded land in the Neponset Tract to be sold at low prices, easy terms, long time.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

6217 A Novel Shirt Waist.—This natty waist, tailored simply, has sleeves which extend to the neck edge and which are finished with a cuff. The back is plain and the front has two patch pockets and the closing band. The neck may be finished with a band or with a wide collar as shown. Linen, poplin or pongee silk can be used to make this shirt waist.

The pattern 6217 is cut in sizes 34 to 42 inches bust measure. Medium size requires 2¾ yards of 36-inch material. Price of pattern ten cents.

6086 Misses' and Small Women's Dress.—This dress is made with the sailor collar The long or short sleeves can be used. The three-gored skirt is made with a flounce. Linen, serge, pongee or poplin can be used to make this dress.

The pattern 6086 is cut in sizes 14, 16 and 18 years. Medium size requires 5 yards of 36-inch material or 3 yards of 54-inch goods. Price of pattern ten cents.

6109 Child's Middy Dress.—The blouse of this dress is made to slip on over the head, but the side seams are left slightly open to allow for this. The neck is trimmed with a fancy collar and the sleeves may be elbow or full length. The kilt skirt is attached to an underwaist which is sleeveless.

The pattern 6109 is cut in sizes 2, 4, 6, 8 and 10 years. Medium size requires 1⅝ yards of 36-inch light material with 1¼ yards of 44-inch dark material, ⅝ yard of 36-inch lining for the underwaist. Price of patten ten cents.

6214 Ladies' Dress.—This smart dress would make an excellent going-away dress for a bride or a dressy street dress for any woman. It is made with a shoulder yoke across back and front, extending well down on the shoulder. Here a plain sleeve is attached. The skirt has four gores. It opens in front over a small panel and may have either normal or raised waistline.

The pattern 6214 is cut in sizes 34 to 42 inches bust measure. Medium size requires 3⅞ yards of 44-inch material. Price of pattern ten cents.

6209 Ladies' Three-Gored Skirt.—This three-gored skirt is one of the best liked of the season's models. It may be made with high or normal waistline, has a few gathers at the back, but is plain in front and at the sides. The closing is in front. Linen or serge can be used to make this skirt.

The pattern 6209 is cut in sizes 22 to 30 inches waist measure. Medium size requires 3⅞ yards of 36-inch material. Price of pattern ten cents.

Bulletin No. 357 of the New York Agricultural Experiment Station (Geneva), announces the failure of summer pruning to control currant cane blight or currant cane necrosis. For eight years every cane showing injury in parts of a currant plantation was cut out, the inspections by the station botanists being frequently and carefully made, but no diminution of the disease could be observed, and the quantity of fruit was lessened on the treated plants. This disease is prevalent in some parts of the Hudson Valley, and the bulletin will be of interest there principally, though perhaps not of profit except in that it shows what not to do.

SOME ORCHARD SUGGESTIONS.

Some trees and vines are much hardier than others, and may be transplanted after they have leaved out in the spring, especially if they are small, if some dirt is spaded up with them, if they are watered freely after being transplanted, and if a plank or something of the kind is put up to keep the sun off for a few days. This is notably true of Concord grape vines, and possibly most other grape vines. So many tender vines and trees may be saved even if replanted after budding out, if you manage wisely.

During the past spring I transplanted a number of young Concord grape vines from my nursery to the grape trellis, after they had put out leaves, spading up as much dirt as possible with each little vine so as to prevent the roots from being exposed, and watering them thoroughly twice a day, to insure their living. But one of the vines had been set out in the nursery as a cutting, and had grown a root system during the winter and early spring, but the roots and the end of the cutting extended deeper into the ground than I thought, and in trying to spade it up with a spadeful of dirt almost all the dirt fell away, leaving the roots bare.

However, I planted the little vine any way, as it was one of the most luxuriant of the lot, gave it a good place at the trellis, put plenty of rich, black leaf mold around it, watered it regularly and stood a broad piece of plank up on the sunny side of it, moving the plank gradually around from east to west in the afternoon.

It seemed that the vine would die despite everything I could do to save it. In the early morning it looked somewhat fresh, but by late afternoon it was dreadfully wilted, and as I felt that this condition was due to my carelessness I was tremendously anxious to make the vine live. It had five tender shoots on the last year's growth of wood, and as these shoots kept getting more and more wilted and sick I began cutting off the ones which looked as if they were going to die, leaving the most vigorous ones. I cut off one each afternoon, so as to force what sap was coming up from the ground into a fewer number of shoots. I began cutting the shoots off from the bottom, but now I believe I should have begun at the top, so as to force the sap into the sprout nearest the ground, for the one nearest the sap supply has a better chance to live.

In four days I had all the tender shoots cut off except one, and yet it didn't revive as it should. The larger leaves looked green, but the bud itself looked unnaturally dark. And yet it looked greener than it would at this time if I had not cut off the other sprouts, because this one sprout was nurtured by all the sap rising in the vine. Still it did not look to suit me, and I decided that if cutting off all but one was a good plan, cutting off all of them would be still better, so I removed the last one, in the hope that the sap would bring out new buds on the vine.

In this I was not mistaken, for almost immediately I noticed that several dead-looking buds were beginning to swell, and within three days they put out tender leaves, and at this writing they are fairly springing into life; growing, it seems to me, fully three inches each day, and I know if I had cut off all the shoots on the vine immediately after setting it out these new buds would have swelled out quicker, and the second growth of tender sprouts would be much longer than they are now.

This is a valuable lesson for orchardists, as there are many kinds of hardy trees and vines which may be transplanted in the spring, and even in the late spring, after they have begun to put out leaves. You often find places where you would like to set out tree or vine in the spring, for perhaps one of your transplanted trees or vines has died during the winter, and you have no way of discovering it until spring. By digging up a hardy tree or vine with a spadeful of dirt and planting it carefully in your orchard where you want it to grow you have the chance to fill in missing spaces in your orchard, and if you make a bad job of digging up the vine or tree with dirt around the roots, and it shows signs of wilting the best thing you can do is not to try to save the tender shoots already on it, but to cut them off, and by watering the tree or vine faithfully force the sap to open new buds.

I know this is a good plan with Concord grape vines. They are hardy vines, and will grow from cuttings stuck in the ground in moist places during the winter, but if set carelessly out it is difficult to save the sprouts upon them at the time of transplanting, and in the effort to save them you may lose the whole vine, as the sap from the decaying, tender new sprouts seems to sour it. Better cut off all the tender shoots if they look wilted, and the rising sap will force out new buds.

Another lesson I have learned, and one which should be valuable to all orchardists, is that you can prevent the too early swelling of buds on young fruit trees by sprinkling the ground around them with cold well water or spring water twice a day, in the early morning and late afternoon. This keeps the ground cold and prevents the buds from swelling. After the trees get older and tougher they may be hardy enough to escape injury from frost without further attention from you.

By this means I kept some young Elberta peach trees from budding out for three weeks after my neighbors' peach trees had budded out, and some of their peach buds were killed by spring frosts. If you have a few dozen fine young Elberta peach trees, Japanese persimmon trees or English walnut trees which you are trying to make grow in a latitude somewhat north of their natural zone you will find this a powerful aid in your efforts, provided you have a well or spring of cold water near by. An ordinary garden sprinkler will hold enough water to sprinkle one tree, and the trees may be easily sprinkled with a half hour's work twice a day, night and morning.

Taking care of a large orchard of young trees in this way might not be practicable, though with a powerful flowing well or spring of cold water you might rig up a sprinkling apparatus on wheels which would be serviceable for use on a larger scale. I have certainly demonstrated that you can hold back the budding time of peach trees three or four weeks, and in the care of young treees it is attention to small details which spells success.

J. M.

The mule business in the United States has an importance few men realize. The South is mainly dependent upon mules for work stock. According to the 1910 census Texas led in the number of mules on farms with 672,781, while Missouri had 342,086; Georgia, 294,720; Tennessee, 275,000, and Mississippi, 254,125. Texas mules were valued at a total of $73,780,676; Georgia, $43,872,651, and Missouri, $43,362,102. The highest average price reported for mature mules was $208.25 in Maine, which had only 342 head. Several other North Atlantic States which had only a few mules also had an average valuation above $150 per head. Among the states with large numbers of mature mules, South Carolina had an average value of $153.64; Georgia, $149,45; Missouri, $141.89; Kansas, $139.69; Tennessee, $135.51, and Illinois, 135.01. The average value of mature mules for the whole United States was $131.54, while the total number of mules and colts was 4,183,572, with a total value of $552,402,080.

CORN HARVESTER with Binder Attachment cuts and throws in piles on harvester or windrow. Man and horse cuts and shocks equal with a corn Binder. Sold in every state. Price $30. W. H. Buxton, of Johnstown, O., writes: "The Harvester has proven all you claim for it; the Harvester saved me over $25 in labor last year's corn cutting. I cut over 500 shocks; will make 4 bushels corn to a shock." Testimonials and catalog free, showing pictures of harvester. Address NEW PROCESS MFG. CO., SALINA, KANSAS

GUARANTEED ALFALFA SEED
Absolutely Pure and free of weeds—vigorous and hardy—endorsed by Experimental Stations and Alfalfa Authorities everywhere; *sold on approval.* Alfalfa will grow on your land. Write for Free sample.

THE LIVE STOCK MARKET

Union Stock Yards, Chicago, Ill., July 12.—Arrival of only 31,500 cattle this week following a crop of similarly small dimensions the week previous and running in conjunction with small supplies of Southwestern grass stuff at other markets and cooler weather that has brought consumptive demand for beef back to something like normal volumn, has worked a radical change in the complexion of the market during the week now closing. Chicago beef steer values have advanced 30 to 50c since the anti-July 4th holiday session and are back up close to the season's high levels. What will happen next week will depend on the grower, and packers are confident that picking will be easier, counting on the bulge to fetch in a materially larger supply, but an opinion exists that cattle back in the country are in strong hands and not likely to be easily dislodged. Fly time is here and that pest usually causes some liquidation, although owing to difficulty in replacing cattle growers are not likely to unload with old time recklessness. The trade is convinced that the high-price pinnacle of 1913 has not yet been passed. Stocks in Packington coolers are so chronically short that a light, fresh supply on two big market days in succession finds buyers scrambling to replentish. Recent good rains have revived pastures, lessening the necessity of liquidating half-fat stuff and have greatly enhanced the prospects for a good corn crop, giving feeders further incentive to make their cattle good before cutting them loose.

Trade of the past week has had a feature in the generous proportion of stillers which have sold largely at $8.30 to $8.75, many of them 50c above last week. When the distillery crop of beef has been cleaned up, corn-fed bullocks may be expected to move up a few more notches, especially if packers have the usual fall incentive to stimulate the filling of feed lots, and no more effective means could be imagined than by making a 10c market for a few bullocks that are in the specialty class. At the rate which stillers are now running they will be practically all cashed in by the end of July.

Demand this week has been strongest for quality, but light receipts of Texas cattle at Kansas City, St. Louis and Fort Worth have been of material aid in boosting so-called "cheap" grades to higher levels. At notable phase of the market has been the unseasonable strength of the market for "cheap beef," the rush of grassers so confidently predicted having failed to materalize. It is a foregone conclusion that anything with a corn-crib cross will sell to advantage all through the season. Frank Branerd, brand inspector for Wyoming and the Dakotas, is in receipt of advices from that quarter to the effect that the beef round-up will be late and the crop small.

A $9.15 top was made this week on ripe heavy bullocks, while prime yearlings touched $9.00. There has been a very fair sprinkling of $8.75 to $9.00 business, a spread of $7.85 to $8.90 has taken 90 per cent of the run and $8.00 to $8.75 close to 80 per cent. There will be a good chance to clean up 20,000 cattle here Monday at probably close to shady prices, but a heavier run will probably cause a temporary decline.

Butcher cattle have advanced with steers and the calf market has soared on another short week's supply. The advance in butcher she stock measures 35 to 60c in extremes over last week's closing, mostly 40 to 50c, while canners and cutters show 15 to 25c gains and bulls are 50 to 75c above last week's demoralized closing on short receipts and a resumption of good eastern demand which disappeared around the July 4th holiday period. Bulk of the butcher cows sold at $5.65 to $6.85; choice to fancy dry-fed classes, in short quota, reaching $7.00 to $8.00; cutter cows selling largerly at $4.65 to $5.10, and canners mostly at $4.15 to $4.50. Bulk of the bologna bulls are going at $5.90 to $6.25 at this writing, with big-weight Holsteins up to $6.35 to $6.40 and only common light bulls from $5.50 down. Prime-fed heifers have scored $8.40 to $8.55, as high as $8.80 having been paid for finished mixed steer and heifer yearlings, and bulk of the fair to good killing heifers selling at $7.00 to $7.90, a decent light, grassy sort around $6.50 to $6.85, and common and inferior sorts downward to $5.50 and lower. The calf trade is running into a small supply period and veal promises to be in the luxury list all summer and fall, though this week's advance, which measures $1.25 to $1.40, will probably be followed by a temporary reaction. Prime vealers sold here Friday at $11.00 and the bulk of the good vealers at $10.50 to $10.75.

This has been one of the lightest weeks in the stock and feeding cattle trade within many months, the press of farm work in all the corn-belt states having its temporary repressive influence both on marketings and demand. Prices are 10 to 15c higher than a week ago. Killers have creamed the run of fleshy feeders, paying up to $8.10 to $8.25 for steers really of only a toppy feeder sort, and giving the country access to no feeders of $8.00 quality. Bulk of the fair to good feeders sold at $7.40 to $7.85 during the week and a like qualitied class of 600 to 800-pound stockers at $7.00 to $7.50, though high-grade feeder steer yearlings are quoted to $7.65 to $7.90 and a decent sort of light, thin stockers, not as well colored as they might be, selling down around $6.75, scrubby dairy-bred stuff going as low as $5.50 to $6.25. Few stock heifers have sold above $6.50 or below $6.00 and $5.25 to $5.75 has taken most of the stock and feeding cows. Quotations:

STEERS.	
Prime steers, 1,300-1,700 lbs.	$9.00@9.15
Choice steers, 1,250-1,500 lbs.	8.90@9.10

Good to choice stock cows	5.40@5.75
Poor to good stock cows	4.85@5.35
Poor to flood stock cows	4.85@5.35

Hog trade continues to perform most creditably. Receipts this week will show a very substantial increase over the small run of the holiday week preceding it, and a modest gain over a year ago, but prices have hit the highest level struck since last April. During the first half of the week advances of 15 to 25c over last week's closing basis were shown and 5 to 15c of this gain has been retained in subsequent trading. Good hard-finished classes show most of the advance, Friday's crop including a half dozen or more loads selling up to $9.20—light and medium-weight butchers, while the bulk sold at $8.85 to $9.10. Green and slippery packing stuff is getting seasonable discrimination and much more of it is coming than previously this season dressing percentages being about 1½ per cent below their early June standard. The price range is certain to widen further between such grades and choice light and butcher classes. Predictions of 10c hogs within the next sixty days are easily garnered. Eastern receipts are dwindling and butchers down that way will be forced to buy more hogs at Chicago, increasing competition here. Pork is needed to supplement an increasing deficiency in beef and whence it is to came nobody pretends to know. Friday's quotations:

Bulk of sales	$8.85@9.10
Mixed, 210 to 250 lbs.	8.75@8.90
Mixed, 170 to 220 lbs.	8.90@9.05
Medium weights	8.90@9.00
Heavy butchers	9.00@9.10
Light shipping	9.15@9.20
Heavy shippings	8.95@9.10
Heavy packing	8.65@8.85
Rough heavy packing	8.45@8.60
Throwout packing sows	8.00@8.45
Fair to choice light	8.90@9.15
Light-light, 135 to 155 lbs.	8.80@9.05
Pigs, good to fancy	8.50@9.10
Pigs, inferior to fair	7.75@8.40
Boars, inferior to fair	4.00@5.00
Stags, subject to dockage	9.10@9.40
Government throwouts	4.50@7.00
Government pigs	3.00@4.25

Fifty-cent advances have been scored on both fat sheep and lambs this week, despite a heavy run of southern lambs at Louisville. The southern run is showing signs of deterioration in quality and a strong suspicion exists that the run from that quarter will be practically over by August 1st, especially if they keep moving meanwhile with the freedom of the past week. There is a strong under current to the market and with beef, pork, veal and everything else in the line of eats high, the trade is looking to the sheep-house trade of the next few months as one promising good things for the selling side. Few range sheep or lambs are as yet reaching Chicago, Omaha and other "river" markets stopping the bulk of the earlier shipments by virtue of paying relatively good prices, and no big runs of rangers are expected prior to August 1st. Orders are piling up here for feeding lambs and a high level trade in that department this fall is certain. It is doubtful if $6.50 would now stop choice feeders. Demand is also gaining breath for stock ewes, a plain sort of aged native stock selling at $3.75 to $4.00, a good to choice class at $4.50 to $5.00 and range yearling breeders of the right kind at quotably high levels. Quotations.

NATIVE STOCK.	
Lambs, good to prime	$8.00@8.35
Lambs, fair to good	7.50@8.00
Lambs, common to fair	6.75@7.50
Lambs, culls	5.50@6.25
Ewes, good to choice handy	4.75@5.25
Ewes, good to choice handy	4.25@4.65
Ewes, culls	2.50@3.75

SAVING OUR GREATEST CROP.

(Continued from page 9.)

accurately to discover the contour of craniums; chests are thumped and stethoscope records are made to test the lungs, while bright colored balls and toys are dangled before surprised eyes in order to test the quickness of mental grasp and the ability of the juvenile brain to respond to a suggestion. And all the while fond and doting parents and even tentative and timid bachelors stand afar off and wonder why the examiners forget all about noting the texture of hair, the Cupid's bow of the lips and the dimples which play about laughing mouths. But these are health contests, not beauty contests; and the item of daily food, the question of sleeping room ventilation and the apparently immaterial details of play are more carefully gone into by the doctors and nurses than are those perfectly apparent points of facial beauty on which former contests were invariably determined.

The photo displayed herewith is one that has been given much publicity and shows a rare good string of Poland China pigs. This photo was taken on the farm of John L. Naiman, Alexandria, Neb., and the pigs are pure bred. Choice boars and gilts are now for sale from this herd. Parties interested should write at once and mention this paper.

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

CONTRACTS FOR SALE OF FARM PROPERTY

The buying and selling of a farm is an important matter and calls for clear-cut intelligence and the exercise of careful attention to the details of the transaction, but such deals are often made in a loose, vague, indistinct manner, which leads to misunderstanding between the parties, and frequently to expensive litigation. When a sale of land is made the transaction necessarily involves many terms and conditions besides the price, the description of the property, and the names of the parties. For instance, the time when possession is to be given, the condition of the premises when delivered, the time when the price is to be paid, the rate of interest on deferred payments, the nature of the security to be given, and many other things that ought to be definitely agreed upon. The subject of fixtures is a very important one and is nearly always omitted from the contract, and left to make trouble afterwards. There are many things about most farms which are difficult to classify. Some things have the nature of personal property in some respects, but are nevertheless fixtures to land, and go with it to the purchaser in case of sale, where there is no actual agreement to the contrary. Things personal in their nature, but fitted and prepared by the owner of the land to be used with it, and essential to its enjoyment, and having been fixed or attached to it, thereby become fixtures, and pass with the land when it is conveyed to a purchaser, where nothing is said about them in the contract of sale. Such things as buildings, fences, gates doors, windows, sashes, screens, door keys, and the like, are so plainly and clearly fixtures that usually no controversy arises concerning them. There are other things, however, that often cause contention between buyer and seller, such as water tanks and troughs for watering stock, ropes and forks, and hay carriers, hog houses, lumber, rails, stone, feed grinders, telephone instruments, and other appliances used upon farms, which lead to misunderstanding, and it is sometimes a difficult matter to determine whether such things are fixtures belonging to the land, or merely personal property, which the seller has a right to remove or dispose of, when he gives possession of the farm to the purchaser. When such things are not mentioned in the contract of sale the seller usually wants to remove them, and the buyer claims they ought to go with the place as fixtures. Much trouble and litigation could be avoided by parties making certain and definite agreements including all such matters, and putting the same in writing, and then sign it, and each one keep a copy for reference. Such a course would leave little room for bad memories and convenient forgetfulness.

Many persons believe that a bargain for the sale of real estate, if made verbally in the presence of witnesses, who will, if necessary, swear to the agreement of the parties, is a lawful and binding contract, and can be enforced by a suit in court. This is not the case. The law provides that a contract for the sale of real estate, or any interest therein, cannot be enforced at law unless the agreement or some memorandum or note thereof, shall be in writing and signed by the party to be charged therewith, or by some other person duly authorized by him to sign it. The object of this provision is to prevent fraud and perjury by fixing in somewhat permanent form the terms and conditions of the contract between the parties. Where a person makes a written contract with the owner of land, for the purchase of it, and the owner refuses to comply with the contract, a court of equity will usually grant relief, and render a decree compelling the seller to comply with his contract and convey the land to the purchaser. When a buyer refuses to comply with such a contract he is liable to the owner for damages.

LAW QUESTIONS CONSIDERED.

VACATION OF PUBLIC ROAD.

A Subscriber, Corning, Iowa.—From fifteen to seventeen years ago a public road was laid out through the center of a section of land, and some county work was done on a portion of it. It is not a school road. The ground is rough and not a single team has ever passed over it. The work that was done has been washed away. Is said road vacated by the statute of limitations and if not, by what means can it be vacated?

Answer.—If the owner of the land has fenced in the road, and used it for more than ten years, he has a right to claim it by adverse possession, but if he has not done this, he will have to file a petition for the vacation of the road in the county auditor's office and proceed in the same way he would do if seeking to have a new road established by the board of supervisors.

CONSTRUCTION OF RENTAL CONTRACT.

A Subscriber, Titonka, Iowa.—A rented his farm to B for cash by a written lease duly signed by both parties, and A paid the rent in full. After A moved off the farm B demanded rent for a telephone which was on the place during the time of B's term as tenant. There was no agreement between them as to extra pay for the telephone. Can B recover from A extra pay for the telephone?

Answer.—He cannot. The use of the telephone was included by implication in the written lease of the farm.

DRAINAGE OF SLOUGHS.

A Subscriber, Clutier, Iowa.—I have a big slough on my farm which is all tile drained. A neighbor who owns adjoining land has a slough on it which he has not tiled and water from it runs over my tiled land and withers grass and grain growing thereon, for an area of forty yards square or more. Can I compel my neighbor to tile drain his slough or take any other course to remedy the matter?

Answer.—You cannot compel your neighbor to tile drain his slough. Your only remedy, if any, seems to be to have a drainage district established which will include your neighbor's land.

LIEN FOR STALLION SERVICE CHARGES.

A Subscriber, Dow City, Iowa.—(1) A bought from B a mare with foal and nothing was said at the time about who should pay for the colt. C, who is the owner of the stallion, wants A to pay for the colt. Can C recover the service fee of the stallion from A? (2) Is a service fee lien good after the mare has changed hands when no agreement has been made about it before the change was made?

Answer.—If C complied with the law about advertising his stallion for public service he has a lien on the colt foaled by the mare for six months after the birth of the colt, and within that time he may place in the hands of a constable an affidavit containing a description of the stallion and of the mare, and the time and place of service, and then the constable must take possession of the colt and sell it at public sale giving ten days' notice, and out of the proceeds pay costs and the service fee, returning balance to owner. (2) A service fee lien is good after the mare changes hands, though no agreement is made by the parties.

POSSESSION UNDER LEASE.

Mr. J. P. Anderson, Anamosa, Iowa.—About twelve years ago I bought my farm of sixty-seven acres, more or less, and paid cash therefor. I got a warranty deed and abstract of title. Afterwards I learned that a strip occupied by a lane and a slaughter house yard was on my land. The party claiming the strip has no deed to it, and no deed to it was ever made by any former owner, but the party claiming the strip claims to hold by an old lease of it made twenty-five years ago. The then owner of the farm sold it, giving a warranty deed and making no reservation of said strip and the farm has passed through several hands since then. Can I recover possession of said strip by law?

Answer.—Unless the lease mentioned is valid and still in force you can recover possession of the strip by law. It is not at all likely that a lease made twenty-five years ago is still in force. It probably was made for a short time and expired many years ago. Possession of the strip for twenty-five years by parties claiming under a lease would not give them title by adverse possession, and they would have only such rights as the lease actually gave them.

TIMBER LAND—FENCES—WILLS.

A Subscriber, Glenwood, Iowa.—(1) A owns a tract of land a quarter of a mile from the public road which he uses for timber only. B owns land on three sides of it, which he uses for farming and pasture. C owns land on the fourth side of A's land, which he uses for timber only. A has to drive along the fence on B's land to reach his land, and has been doing so for twenty-five years. Can B prevent him from doing so? (2) Can B compel A to construct a hog-tight fence on the three sides of A's timber land? (3) Last summer B took down his wire fence in one place so his stock could get in A's timber for pasture and A drove the stock back and nailed up the wires. Can A recover damages from B? (4) A farmer died several years ago, leaving a will by which he gave his wife all his personal property and a life interest in his real property, the real property at her death to go to their son, the farmer having no other heirs. The will was set aside and the widow took the personal property, and the real property was divided equally between the widow and the son. The widow has several brothers and sisters. Can she will all her property to them, leaving none of it to her son? (5) What is the usual fee of attorneys for breaking a will?

Answer.—(1) B can prevent A from driving over his land. The proper course for A is to buy or condemn a right of way over B's land for a private road. (2) He cannot. The owner of timber land used only for the timber thereon is not required by law to fence it. (3) A cannot recover damages from B. (4) The widow can will all her property to her brothers and sisters and disinherit her son, and such will cannot be set aside for that reason. (5) There is no usual or uniform fee. It would depend upon the circumstances of the case, the amount of property involved, etc.

MAKING A WILL—MINOR AS EXECUTOR.

A Subscriber, Elk Point, S. D.—(1) I am a widower and I wish to make a will providing that none of my real estate shall be sold until my minor children shall attain the age of eighteen years and six months. Would such a will be lawful? (2) I wish to appoint one of my minor children as executor of my will. If I should die before he becomes of age could he act as such executor?

Answer.—(1) Such a will would be lawful. It would be prudent to have a reliable lawyer draw the will. (2) Your minor child would not be eligible as executor of your will, that is, he could not qualify and act as executor while he is a minor, but if you should now name him in your will as executor thereof and he should be of age when you die, he could act as executor.

DESTROYING THE GRASSHOPPERS.

The grasshoppers are coming. Some of them are already at work. Fully 90 per cent of the eggs laid last fall probably passed through the winter uninjured, according to George A. Dean, the bug expert at the Kansas Agricultural College. Professor Dean says grasshoppers probably will do more damage this year than in 1912 unless prompt and vigorous work is done to destroy them. Poison bran mash, the hopperdozer, poultry and young hogs have proved efficient for checking the ravages of grasshoppers.

Poison bran mash should be made this way: Bran, twenty pounds; Paris green or white arsenic, one pound; sirup, two quarts, oranges or lemons, three; water, three and one-half gallons.

In preparing the bran mash, mix the bran and Paris green or white arsenic thoroughly in a wash tub while dry. Squeeze the juice of the oranges or lemons into the water and chop the remaining pulp and the peel to fine bits and add them to the water. Dissolve the sirup in the water and wet the bran and poison with the mixture, stirring at the same time so as to dampen the mash thoroughly. The bait when flavored with oranges or lemons was found to be not only more attractive, but was more appetizing and thus was eaten by more of the grasshoppers.

The damp mash or bait should be sown broadcast in the infested areas early in the morning. The amount of bait made by using the quantities or ingredients given in the formula should cover four or five acres. As very little of the bran mash is eaten after it becomes dry, scattering it broadcast in the morning, and very thinly, places it where the largest number will find it in the shortest time. Sowing it in this manner also makes it impossible for birds, barnyard fowls or live stock to get enough to kill them.

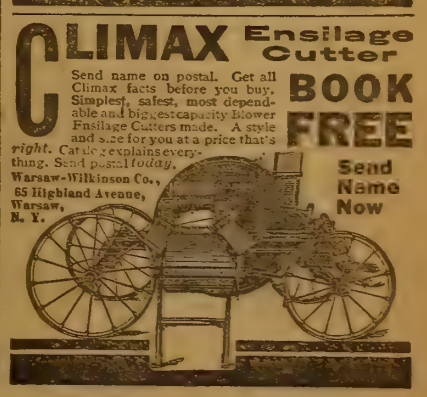
On alfalfa fields, to get the best results, the bait should be applied after a crop has been removed and before the new crop has started. As the poisoned bait does not act quickly, it will be from two to four days before the grasshoppers are found dead and these will be numerous in the sheltered places. It does not take much poison to kill them. Even a small part from one of the poisoned flakes will be sufficient to cause death.

Coal oil has been used in many ways for the destruction of grasshoppers, but is most commonly used in the hopperdozer, a device which consist of a long, shallow, galvanized iron pan, mounted on very low runners. The hopperdozer is very effective where it can be drawn over an infested area near the surface of the ground. It is necessary wherever grasshopers become destructive.

On infested bare areas or fields where it does not injure the crop, grasshopper damage can be quickly checked by its use. It can be used without injury in an alfalfa field for two or three weeks after a crop has been cut.

Any grade of kerosene may be used in the hopperdozer. The first cost of a hopperdozer should not be more than $8. It should be operated at a cost not to exceed twenty cents an acre.

The annual corn crop of this country amounts to two billion seven hundred million bushels. Of this two hundred and forty-five million bushels are used as human food, forty million bushels are made into starch and glucose, thirty-five millions into malt and distilled liquors, one hundred and twenty millions for feed in towns, and forty-five millions are exported to other countries. More than two billion bushels do not leave the farm at all.



DATES FOR LIVE STOCK SALES.

Short-horn Cattle.

July 29-30, D. R. Hanna, Chicago, Ill.
Sept. 19, P. G. Tyrrell, Oxford Jct, Iowa.
Oct. 6, Carey Cameron, Herman, Neb.
Oct. 14, Thos. Stanton, Wheaton, Ill.
Oct. 15, C. J. McMaster, Altona, Ill.
Oct. 16, R. W. Botts, Plymouth, Ill.
Dec. 9, J. A. Richardson, Wall Lake, Ia.
Dec. 9, H. H. Kuper, Humboldt, Neb.
Dec. 10, Blank & Kleen, Franklin, Neb.
Dec. 10, C. A. Oldsen, Wall Lake, Iowa.
Jan. 16, T. E. Bly, Brewster, Minn.

Hereford Cattle.

Oct. 22, O. Harris & Sons, Harris, Mo.
Oct. 24, Leigh & George, Aurora, Ill.
Dec. 30-31, Mousel Bros, Cambridge, Neb.
Feb. 24, J. B. Ashly, Audubon, Iowa.

Holstein-Friesian Cattle.

Oct. 1-2, S. T. Wood, Painesville, Ohio.
Oct. 21-22. Woodlawn Farm, Sterling, Ill.
April 29-30, T. H. Russell, Geneva, O.

Aberdeen Angus.

Oct. 15, Escher & Ryan, Botna, Ia.

Percheron Horses.

Aug. 20, W.J.Cunningham, Pittsfield, Ill.
Dec. 9, W. S. Corsa, Whitehall, Ill.
Dec. 10, A. L. Robison & Sons, Pekin, Ill.

Poland China Swine.

Aug. 12, H. Fesenmeyer, Clarinda, Ia.
Aug. 12, J. G. Hutchinson, Crete, Neb.
Aug. 13, Pfander & Sons, Clarinda, Ia.
Aug. 19, Alvin Windom, Nodaway, Iowa.
Aug. 20, Williams Bros., Villisca, Ia.
Sept. 10, W. E. Zimmerman, Neola, Ia.
Sept. 16, Fred Sievers, Audubon, Iowa.
Sept. 17, L. R. McClarnon, Braddyville, Iowa.
Sept. 24, E. W. Kreischer, Mt. Vernon, Iowa.
Oct. 1, D. C. Lonergan, Florence, Neb.
Oct. 7, W. H. Cooper, Hedrick, Iowa.
Oct. 8, C. W. Phillips, New Sharon, Ia.
Oct. 9, C. F. Adams, Owasa, Iowa.
Oct. 10, A. Kool, Cordova, Iowa.
Oct. 10, Williams Bros., Villisca, Iowa.
Oct. 11, Frank Pelzer, Marne, Iowa, sale at Atlantic, Iowa.
Oct. 11, Gilbert Johnson, Osceola, Neb.
Oct. 11, Wigstone Bros., Stanton, Iowa.
Oct. 13, C. B. Powers, Aurora, Neb.
Oct. 13, Frank Roberts, Earlham, Iowa.
Oct. 13, R. R. Blake, Dallas Center, Ia.
Oct. 16, T. A. Shattuck, Hastings, Neb.
Oct. 16, Harry Dodds, Florence, Neb.
Oct. 17, Walker & Son, Fairbury, Neb.
Oct. 18, Joshua Morgan, Hardy, Neb.
Oct. 21, C. W. Francisco, Inland, Neb., sale at Hastings, Neb.
Oct. 22, J. T. R. Nash, Minden, Neb.
Oct. 23, T. W. Cavett, Phillips, Neb.
Oct. 23, Seckington & Hilliker, North English, Iowa.
Oct. 24, Lingford & Reilly, St. Paul, Neb.
Oct. 27, C.W.Hutchins, Weeping Water, Neb.
Oct. 28, R. B. Baird, Central City, Neb.
Oct. 29, Tim Neuhofel, Central City, Neb.
Oct. 29, A. Smith & Sons, Superior, Neb.
Oct. 30, O. E. Wade, Rising City, Neb.
Nov. 1, F. H. Hassler, Manning, Iowa.
Nov. 1, F. H. Hassler, Manning, Iowa.
Nov. 5, H. O. Williamson, Herman, Neb.
Nov. 6, L. B. Williams, Villisca, Iowa.
Nov. 6, W. E. Epley, Diller, Neb.
Nov. 8, J. L. Naiman, Alexandria, Neb., at Hebron, Neb.
Nov. 13, John S. Barnard, Nelson, Neb.
Nov. 12, E. V. Waugh, Greeley Center, Neb.
Jan. 27, Thos. F. Miller, York, Neb.
Feb. 4, W. H. Cooper, Hedrick, Iowa.
Feb. 11, H. L. Faulkner, Jamesport, Mo.
Feb. 16, C. M. Pederson, Dunlap, Iowa.
Feb. 18, Bloemendaal & Korver Bros., Alton, Iowa.
Feb. 24, R. R. Blake, Dallas Center, Ia.

Duroc Jersey Swine.

Aug. 6, W. M. Sells and Swan & Ellis, Indianola, Iowa.
Aug. 7, O. S. Larson, Logan, Iowa.
Sept. 26, E. W. Day & Son, Newton, Ia.
Sept. 26, J. W. Cartwright, Burlington, Iowa.

Jan. 23, R. G. McDuff, Monroe, Iowa.
Jan. 24, J. E. Smith, Victor, Iowa.
Jan. 24, Henry Wegter, Sheldon, Iowa.
Jan. 26, J. Smith, Everly, Iowa.
Jan. 27, H. S. Fain, Emmetsburg, Iowa.
Jan. 28, F. S. Dickey, Emmetsburg, Ia.
Jan. 29, Grant Lynn, Spirit Lake, Ia.
Jan. 30, S. C. Weaver, Lake Park, Iowa.
Feb. 23, E. L. Busch, Syracuse, Neb.

Hampshire Swine.

Oct. 10, C. P. Paulsen, Nora, Neb., at Fremont, Neb.
Oct. 14, Clayton Messenger, Keswick, Iowa.
Nov. 3, A. C. Mills, Spencer, Iowa.
Nov. 4, H. D. De Kalb, De Kalb, Iowa, sale at Council Bluffs, Iowa.

Chester White Swine.

Oct. 14, M. W. Young, Ankeny, Iowa.
Feb. 12, J. H. Stewart, Dickens, Iowa.

FIELD MEN.

M. T. White, western Iowa and Nebraska (north of the Platte river). Address 4015 Izard St., Omaha, Neb.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

A. T. Cole, Missouri, Kansas and Oklahoma. Address 3900 Holmes St., Kansas City, Mo.

John C. Halderman, Kansas. Address 4347 Harrison St., Kansas City, Mo.

J. C. Price, southern and western Nebraska. Address 145 So. 28th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

A dark-gray four-year-old Percheron mare is described and priced on page 23 of this issue. Further particulars in regard to this animal may be had by writing Amos Hanson, Collins, Iowa.

S. J. Butts, a well-known breeder of Duroc Jersey hogs, Mason City, Iowa, advises us that he has nothing whatever to dispose of at the present time and will not have until he makes later announcements in the fall.

G. H. Tutt, Marathon, Iowa, advertises two splendid Chester White herd boars for sale that are bred right and are good individuals and good breeding boars. He also has about forty good spring boars that he is booking orders for at any time. If you want one of these herd boars or a good spring boar you had better write Mr. Tutt at once. See page 20.

October 25th McClelland & Pfander, will make their annual fall sale of Duroc Jersey boars and sows at Clarinda, Iowa. These gentlemen have a good string of spring pigs sired by Golden Col., a son of the great Chief's Col., that now heads their herd. This is a large hog and has been giving excellent satisfaction as a breeding boar in their herd. They also have litters by Crimson Climax, Critic B., Big Col., Crimson Col. and Valley King 3d. If everything goes well with these gentlemen they will have a good offering for their sale this fall.

Earl Bloom, Bridgewater, Iowa, writing with reference to his Shropshire sheep advertisement, which appears on page 21 of this issue, says: "I am closing out my herd, as I have other business that takes my time and I cannot get help to take care of them. I have both imported and home-bred, all record stuff. They are big, heavy-boned, well-wooled and good mutton type. I have spent a lot of money to build my flock up, but must close them out and offer them for sale with regret. I will make prices on my choice ewes at about one-half what I gave for them. Will sell by the head or let the whole flock go in bunch. Seventy-five per cent of my ewes raise twin lambs. I recently sold a choice buck and three ewes to a Springfield, Ohio, man to start a flock with at from $30 to $40 each. Have more just like them, and better, that I will take $10 to $30 each for."

Gates' Spotted Polands.

J. D. Gates, Ravenwood, M., the breeder of old-fashioned spotted Poland China hogs, has bred the big-type Poland for over twenty years and his spotted ones are hogs he has developed from the original stock as bred when Poland China breeders did not discard a good one because of an extra white spot or two. Mr. Gates has 150 spring pigs for the trade and he prices them worth the money. Note his advertisement on page 22 and when writing him kindly mention this paper.

Satre's Chester White Hogs.

G. O. Satre, Jewell, Iowa, has an excellent herd of Chester White hogs which are advertised on page 20 of this paper. This gentleman has at present for sale quite a number of high-class sows that are to farrow soon, and in order to get them out of the way quickly he is making some remarkably low prices. These sows have been well raised. They come from strictly good foundation stock and are of the sort that cannot fail to make money for any buyer. Write quick for prices and descriptions. Address G. O. Satre, Jewel, Iowa, mentioning The Homestead when you do so.

Col. Sensation 98291.

One of the largest Duroc Jersey boars that has ever been seen at the Iowa State Fair will be shown this fall by J. B. Ashby, Audubon, Iowa. When it comes to a large-type Duroc Jersey boar the breeders will all have to take off their hats to this hog. He is a son of that noted breeding boar, King The Col., and is therefore a half brother to Col. Gano. His dam is Violet Beauty Pride by old Winning Sensation, a boar that for years stood at the head of the Jim Williams herd at Marcus, Iowa. Col. Sensation was weighed by M. T. White, of The Homestead, on July 8th and he tipped the scales at 995 pounds. With forty days ahead of him before the fair he can easily be made to weigh from 1,050 to 1,100 pounds. He is not only a large boar, but he is a smooth boar for a hog of his size. He is a good hammed hog, has a splendid back, a leg under each corner and he is well balanced from end to end. This boar has been gaining at the rate of four pounds a day for some time and he could very easily go into the show weighing considerably over 1,000 pounds. The get of this boar has been extremely large and as the Duroc Jersey world just now is seeking the larger-type kind they will therefore be interested in seeing this boar at the Iowa State Fair this fall. Just remember when you go there this fall to look for Col. Sensation and you will say he is one of the largest and smoothest big-type Duroc Jersey boars you ever saw. If you are bound to see him before that time you will have to go to Mr. Ashby's farm where the hog can be seen at any time. See advertisement on page 21.

Duroc Jersey Fall Boars.

Anybody wanting a good fall boar should write G. C. Everts, Audubon, Iowa. He has twenty head, all sired by Golden Model 3d and he is pricing these at the low figure of $25 to $50 just to move them rapidly. He has some splendid boars among the bunch. Write him about these at once and mention The Homestead.

W. J. Hather's Poland Chinas.

W. J. Hather, Ord, Neb., maintains not only one of the largest, but one of the real good herds of Poland Chinas of the country. This herd has been drawn upon for much of the good breeding stuff of the country, and today is in better shape if possible than it has been at any previous time. The best aged show boar that we have seen to date, in the opinion of the writer, is on this farm. He is Hadley Over. He was placed second at Nebraska as a junior yearling, and was first and reserve champion at the International. This boar will weigh 900 or better by fair time and is as smooth as the best of them. If he does well from now on it will be a good boar that beats this fellow this fall. A grand lot of young stuff is on the farm and good boars and sows will be for sale from now on. A few good sows bred for fall litters will be shipped any time. Parties in need of something of this sort will do well to write at once and when doing so, kindly mention The Homestead.

C. H. Gausman's Hampshires.

One of the new herds of Hampshires of the state, and one that bids fair to be among the leaders, is the herd owned by C. H. Gausman, Seward, Neb. Mr. Gausman has been breeding Hampshires for the past two or three years, and today has a really nice lot of stuff. He has some very good boars on the farm, especially a yearling and the early spring pigs. This yearling boar is from the Jones herd, Beaver Crossing, and has sired good stuff for Mr. Gausman. He is now for sale and priced well worth the money. He is King of Beaver, by Duke of Walnut, and out of Topsy by A. D.'s Fancy. Some of the yearling sows are sired by a son of King of Geneva, a boar bred by Mr. Tatro, and his dam is Kate Good by Majestic Boy. Those that have the time to visit Mr. Gausman will be well repaid for their time, and those that cannot visit this herd can easily purchase what they wish by mail. This yearling boar is priced to sell, and we believe is cheap. Better write about him at once.

E. V. Waugh's Polands.

Among the good stockmen at Greeley Center, Neb., we wish to mention E. V. Waugh. His Poland China herd is one that has attracted considerable attention, and one that has produced a lot of good breeding stock. This is one of the oldest herds in the country, having been maintained for a score of years or more. Just now Mr. Waugh has a farm right at the edge of Greeley Center and is better fixed to take care of his trade than he was several years ago when he was a long way from town. The present herd is headed by Victor's Wonder by the well-known Big Victor and he is out of Lady Wonder's Best. This great sow was the top of Lonergan's sale a couple of years ago and was purchased by Henry Wissel, Roca, Neb. Mr. Wissel also has a boar of this mating and he is mighty choice. Mr. Waugh's boar will be as big as there is any need of, in fact, he is going to be extra big, and yet he is siring a good lot of pigs. Mr. Waugh plans on making a sale on November 12th, at which time he will sell all of his boars and enough of the good gilts to make a good offering. Keep the herd in mind and watch The Homestead for further announcements, which will appear in due time.

James' Special Bargains.

Poland China breeders who want to get in on the ground floor and want to buy a good pig should read the advertisement of J. O. James, Braddyville, Iowa, on page 22. He will not make a fall sale and he is therefore closing out his pigs at private treaty and has a few very choice things left. He has a splendid fall boar sired by Big Orange and out of Anna Price 13th, that is a good proposition to buy for a herd boar. He is smooth and will make a 900 to 1,000-pound boar when matured. He is a full brother to the Elijah Story boar and also the Ott's Big Orange and the Tom Walker boar. Then comes three corking spring boars sired by Big Orange and out of Ott's Choice, one of the most famous brood sows in his herd. These pigs are good enough to head any herd in the land and the first breeder that sends his check for $50 gets one of them. These are full brothers to the Gutshall boar, Orange Jumbo, that is regarded as so good over East. Two more good boars by Ott's Big Orange are out of May King 2d, a granddaughter of Long King and these are very choice. A check for $50 takes any one of these and they will be great bargains to the man who is going to want a boar this fall. These pigs will weigh 160 to 175 pounds and they are not fat. He also has two by A Wonder's Giant and out of a Big Orange sow that are very good. If you want a bargain in a boar that will make a reputation for your herd just order one of these boar pigs. He also offers to sell six two-year-old sows that are all tried and proven brood sows and these are bred to Big Orange, also five good Big Orange yearlings that are bred to A Wonder's Giant and he makes a splendid cross with Big Orange sows. These sows will make 700 to 750-pound sows when matured and will be smooth and easy feeders. The man that sends an order for one of these boar pigs now will be away ahead of the game when the breeding season rolls around, so we will therefore say to The Homestead readers to order one of these boars or some of these sows right away. When writing him kindly mention The Homestead.

Fesenmeyer's Great Sale.

One of the greatest midsummer sales of big-type Poland Chinas that will be held in the near future will be that of Henry Fesenmeyer, Clarinda, Iowa, on August 12th. The Fesenmeyer herd has been noted from one end of this country to the other, largely through old A Wonder, that sensational breeding boar at the head of his herd. When it is all said and done old A Wonder must be regarded as one of the greatest of all the large-type boars living or dead and Henry is going to sell some splendid boars by him in this sale. He will also sell some excellent boars and sows by Big Ben, another great boar in his herd, and he is selling some of the best yearling sows you ever saw sired by Big Ben and bred to old A Wonder in this sale. In fact, he has a great line up in this offering that he is going to sell on August 12th. Write him for a copy of his catalog at once and kindly mention this paper.

Young's Chester White Sale.

It will no doubt be a surprise to breeders of Chester White hogs to learn that M. W. Young, Ankeny, Iowa, has decided to make a dispersion of his herd on October 14th. From present prospects, as seen by a representative of this paper, who visited the herd last week, the sale will include animals that will be creditable to any herd. The head of the herd is St. John, a big, square, blocky, broad-backed hog, that was grand champion at the Wisconsin, Illinois and Minnesota State Fairs, at the last of which he was also in competition with the hog that won first and championship at the Iowa fair. The brood sows of the herd are daughters of Combination, O. K.'s Prince and College Teddy, all of which are well known to those who have kept posted on show-yard records. Each has been prominent not only in the show ring, but of the breeding yard as well. These brood sows will go into the sale. There are also many fall sows and boars, the get of New Hampton Regulator, an animal of the most promising ancestry and that was also a prize winner. The spring pigs are the get of St. John above mentioned. In a later issue of this paper details will be given concerning the sale. In the meantime, however, it would be well for those who expect to buy good stock this fall to keep the sale in mind.

Will Bornemeier's Durocs.

The writer recently called on Will Bornemeier, Elmwood, Neb., and we wish to report a good bunch of Durocs. Mr. Bornemeier has been buying good stock for several years and as he is a good stockman, they have done well in his hands. His foundation material has been drawn from good herds, and with the care they have had have fully demonstrated that blood will tell if it has a chance. There is a nice crop of pigs this year and they are nearly all the get of Model Wonder by Crimson Model by C. W. Again. The dam of Model Wonder is a daughter of the great Lincoln Wonder. It is no surprise that a boar of such breeding should prove a good sire, for he could not well do otherwise. The sow herd is of especially good lines to mate with the Crimson Wonder strain of stuff, being of Proud Advance breeding. Three sows are daughters of Miss McCarthy by Mc's Improver by Improver 3d and they are sired by Proud Improver by Proud Advance. This line of stuff has mated exceptionally well with Crimson Wonder families. One litter is sired by the famous state fair winner last year, Wilde's Wonder, by Uneeda Crimson Wonder and they are from a daughter of Crimson Wonder Boy by A Crimson Wonder. This young sow was one of the good ones of the David Boesiger sale. There are some very good prospects in this litter, and as these boars will be sold privately, we believe that it would be a good plan to write early for one of these boars. Mention The Homestead when doing so.

Hutchinson's Poland China Sale.

On August 12th, J. G. Hutchinson, Crete, Neb., will sell practically all of his spring crop of Poland China pigs and also a few sows that are bred for fall litters. These pigs comprise one of the very best lots of spring pigs that the writer has seen to date. They are the big, smooth ones and in splendid condition. They are sired by one of the very best boars that Walker & Son, Alexandria, Neb., have produced in a long time. He is a son of Blue Valley by the great Blue Valley Quality and out of Blue Valley Beauty 3d, one of the best producers of the Walker herd. The dams of these spring pigs are by Big Tecumseh, King Mastiff, Growthy King by Long King, and a few others that are extra good. We do not know of a herd for its size that surpasses the herd owned by Mr. Hutchinson. He has employed good breeding stock and he is a good caretaker. These gilts and boars that will go in this sale are real breeders' material, and certainly should go to them. These gilts will be ideal for those that need a few brood sows for another year, or to fill out either a later fall sale or a winter sale. They are the sort both from the standpoint of breeding and individual excellence that will make the breeder money that invests in them and they will add prestige to almost any sale into which they may go. The boars are an equally good lot, and our advice to breeders living long distances would be to buy one of these boars. The express charges will be little and these boars will probably be bought for less money than they will be later on. Write Mr. Hutchinson today and ask him to send you a catalog of this offering, and plan

to be on hand sale day, but if that is impossible, send some bids, for this stuff is the right kind. Mention The Homestead when you write.

Williams Bros.' Poland Chinas.

On October 10th at Villisca, Iowa, Williams Bros. will make their annual fall sale of fifty head of Poland China boars and sows. These breeders had 300 head of spring pigs on their place this summer and they expect to select the tops only for this sale. These will be sired by Big Sampson, the great and only Pawnee Nelson, Wonder's Big Prospect and A Jumbo. They have a grand good lot of spring boars and spring gilts on hand and they could sell a few of these at any time. They will ship two for $50 or three for $75, if you will order them shipped right away. This offer does not hold good for all time, as they must be ordered at once. They will fill this order with pigs not related. They have one of the best herds in southwestern Iowa, and the man that is looking for both size and quality will be extremely well pleased. Don't overlook the opportunity to buy these pigs, but write them right away. Kindly mention this paper when corresponding with them.

Pelzer's Big Polands.

On October 11th, Frank Pelzer, Marne, Iowa, will make his annual fall sale of large-type Poland Chinas and he intends to hold this sale at Atlantic, Iowa. He has seventy-five head of spring pigs and he has a lot of good ones. He is a breeder and a hogman and he generally has them in such a condition as makes them nice to look at. They are strictly growthy and when sale time comes around you will see a grand good lot of pigs in his offering. Mr. Pelzer owns that splendid young boar, Orange A., that was one of the very best boars sold by J. O. James last fall. He is a son of the noted boar, Big Orange, and he is going to be as large as the law will allow and that means that he will closely push the 1,000-pound mark when matured. He has thirty-five head of fall boars and there are a lot of extra good ones in this bunch. These are all sired by Tom Keene, a son of the Nebraska State Fair first-prize boar, Big Tom. He might be induced to part with one of these fall boars at any time, as he will have plenty left for his fall sale. If you will only call and see him he will make the price right on anything you want. When you write him kindly mention The Homestead.

Fred Sievers' Big Wonders.

When it comes to seeing a splendid lot of big-type Poland Chinas the breeders will have to take off their hats to the herd of Fred Sievers, Audubon, Iowa, and when you talk about a big-type Poland China boar then go and feast your eyes on his Big Wonder boar that stands at the head of his herd, and then go and look at his big yearling, Orphan Wonder, the boar that topped the Tim Neuhofel sale last fall. It isn't very often indeed that you will go into one herd and see two such boars as you will see in the Sievers herd. Then when you look over his sows you will say he has sows of the same high class and then you will see a reason why he has a most excellent lot of pigs on his place. He certainly has a grand lot of spring pigs, and they are large, stretchy and of the big-boned kind that they are all after. The boar, Big Wonder, won second place at the Iowa State fair last fall and was not fitted, and he was one of the greatest attractions in the large-type boars at that great show. Breeders all remember him and he has been one of the most widely talked of boars in the West since that time. Mr. Sievers will make a public sale on September 16th, and he will have a great line up for this sale. Drop him a card and have him place your name on his list for a catalog. Please mention The Homestead when writing him.

Hanna's Short-horn Dispersion.

The dispersion of D. R. Hanna's Cottage Hill herd of Short-horns at Chicago, Ill., July 29th and 30th, will mark the passing of one of the leading herds of the country. Neither time nor expense was spared in the founding of the herd, the best Short-horns to be found on either side of the water being secured in abundance and valuable additions have been made from time to time, until today it is one of the great breeding herds of the country. The blood of the greatest sires known to the breed is found in abundance in this herd, and among the 125 head of cattle listed for the dispersion sale there is not one animal that does not possess a straight Scotch pedigree. Under the skillful management of John Garden this herd has been brought to a high state of producing efficiency and not in years has such an opportunity to procure high-class Short-horns at public sale been presented. It is impossible to particularize concerning this lot of cattle. Among the 125 head to be sold will be found animals to meet every want, and no reader of The Homestead in the market for Short-horns can afford to miss this sale. The bull portion of the offering is remarkable in every way. It includes Imp. Villager, everywhere recognized as one of the greatest Short-horn sires of the present day, his sons, Village Denmark and Village King, both little short of sensational. In fact, the writer considers Village Denmark one of the greatest prospects in the country for grand champion bull at this year's shows. He never was in better form than now. There is also Champion of Scotland, an outstanding good one and choicely bred that was imported this summer by Mr. Hanna especialy to use upon his Villager heifers. There are also three young sons and grandsons of Villager. The female list includes thirty daughters of Villager. Never again will the opportunity be offered to secure so much of the blood of this prepotent sire and the chance should not be overlooked. Breeders will find this a rare place to secure cattle to strengthen their herds and the beginner looking for the very best of foundation stock should congratulate himself that he will be afforded an opportunity to make selections from so well bred a herd. Every Short-horn breeder should be interested in this sale, the attendance should be large and the bidding liberal. Write today for the catalog to John Garden, manager, Ravenna, Ohio, mentioning The Homestead. The advertisement appears on page 20.

J. J. Beehrle's Durocs.

While at Ord, Neb., a short time ago the writer called on J. J. Beehrlee of that place and found his Duroc Jersey herd in better shape than it has been for the past couple of years. Mr. Beehrle has a good herd of stuff, of good breeding and well grown. A couple of years ago, he owned one of the extra good boars of that time to be found anywhere. He was Custer Ohio Chief, and as an individual as well as a breeder he was in the front rank. A number of sows of his get are still on the farm, and producing some of the very best of the herd today. The foundation sows that were in use when Custer Ohio Chief was in service were of Orion and Kant Be Beat breeding. The present stock is descended from this line of breeding, and comes through such sires as Echo Wilkes, Custer Ohio Chief's Favorite and Fancy Chief. Fancy Chief is in service today. He is sired by Crimson Chief. He is a yearling of the right sort, big and smooth. His pigs are a uniform lot, and there is no question but that there will be many high-class boars to be offered from this herd later on. There are a couple of fall boars on hand, sired by Royal Chief. These boars are extra big, and one of them extra good. Readers of The Homestead in search of a big, strong, smooth boar will do well to buy this fellow. Keep Mr. Beehrle's herd in mind, and watch The Homestead for further announcements.

Henry Wissel's Poland Chinas.

A few years ago, Henry Wissel, Roca, Neb., began buying some good Poland Chinas. He soon became convinced that nothing short of the best would please him, and accordingly visited many of the good herds of the country, and taking home some of their tops. Later he topped some of the best sales, buying the top sow, and the noted producer, Lady Wonder's Best, in the Lonergan sale a couple of years ago. Afterward he made good purchases in the Walker & Son's sale and those of other well-known breeders. Last fall at the Nebraska State Fair he purchased the first-prize junior yearling boar. He was shown by Mr. Stout, Beatrice, Neb., and was considered the best fitted hog on the fair grounds and was unquestionably one of the best show propositions that has ever been on the Nebraska fair grounds. Some spring pigs are by this boar, but the most of the spring pigs are by Jumbo Wonder. This boar is by Big Victor and out of Lady Wonder's Best. He is one of the biggest yearlings that we have seen to date, and has every appearance of making an extra big boar at maturity. E. V. Waugh, Greeley Center, Neb., has a litter brother to this boar, having purchased him of Mr. Wissel at the fair last season and he is also an extra big one. Mr. Wissel has one yearling sow out of this litter that is certainly very fine. The spring boars will be for sale at private treaty, and will be priced from this date on. Kindly write Mr. Wissel if interested and mention The Homestead when doing so.

Lawson Offers Great Bargains.

We want to call special attention to readers of this paper who are going to want a big-type Poland China boar to the advertisement of John B. Lawson, Clarinda, Iowa, on page 22. The boar that made the reputation of the Lawson herd is Ling King's Equal, a hog that will weigh 1,000 pounds, and he was the best son of old Long King. As a breeding boar he has no superior in the West, or in fact, any place else, and today some of the best herd boars in this country are sired by him. Not only is this hog the sire of some of the greatest herd boars, but he is also the sire of some of the best big-type sows living. He is the sire of that sensational big-type sow, Mammoth Giantess Lady in the Pfander herd, and she in turn is the dam of the sensational young boar, King of Wonders, that has made such a great hit in the Pfander herd. We just simply call attention to these to show our readers that all of the best breeders have been eager to get the get of this great breeding boar, and the breeder who has a boar or some sows sired by him in his herd is indeed very fortunate. Mr. Lawson is just now offering some splendid boar pigs by this hog and as he will not make a sale this fall he is therefore selling them out at private treaty. We have seen these pigs and we will say that he has some extra good ones, and the man that sends him an order for one of these now will not only get a bargain, but he will get him for less than half what he would have to pay for the same kind of a pig this fall. These are out of sows that will weigh 600 and 700 pounds, and they are certainly good ones. No less a person than Tom Shattuck, Hastings, Neb., one of the most noted breeders in the West, after having visited dozens of herds, went to John Lawson's and selected a pig by Long King's Equal and he has a litter brother of this pig that is about as good. He also has some splendid boars by A Wonder's Jumbo, one of the best living sons of old A Wonder and some of these are out of Long King's Equal dams. He also offers some splendid young sows for sale bred to these two splendid boars for fall litters, and anybody that sends him an order for one of these will make good on them, because the get of these two hogs is always in demand. Take our word for it and send John Lawson an order for one of these good boars or for a bred sow and we will guarantee you will be pleased with your investment. Write him right away and kindly mention this paper.

JULY PREPARATION FOR THE WINDOW GARDEN.

To the Editor of The Homestead:

If you wish your windows to be a mass of bloom this winter you must begin now to prepare for it. A variety of kinds and colors make your collection the more interesting and can be provided as easily as a window full of geraniums.

If your callas, cyclamen and amaryllis have not been set aside to rest, do not delay longer. June is the proper month to do this, but they can have a good rest yet. Put the callas and cyclamen outdoors in a shady, protected place, turning the calla pots on their sides. The amaryllis can be kept anywhere, but no water should be given it until quite dry, and then only enough to keep the foliage from dying off. The outside leaves may turn yellow at the tips without harm. The more complete the rest, the sooner and stronger it will bloom. These bulbs can be made to bloom twice a year if rested after each blooming period, and they will seldom bloom at all or but weakly unless given a rest. I have had people tell me they had thrown away their bulbs because they had never bloomed. Sometimes this is because they buy small plants, or bulblets just started, which some mail order houses sell, but which will not grow to blooming size for several years. I would not purchase an amaryllis bulb less than an inch and a half in diameter.

Freesia bulbs can often be obtained this month and they should be planted as soon as they are at hand, and the pots set somewhere in the open where they can have attention, for they will have to be watered freely and regularly. The open air makes the plants strong and sturdy, and you will be surprised at the difference it makes in the bloom. For the best effect plant as many bulbs in a pot as you can, having no two nearer than one inch apart.

Geranium cuttings can be taken this month if you want young plants, but if you want the old plants for winter blooming do not slip yet, but keep all buds pinched close. It is supposed your plants are in the open where they will not make a rank soft growth, but should they be shaded to a great extent, and the shoots are long and tender, cut back a branch or two at a time each week until you have it compact, and pinch the tip out of each new shoot when it gets about four inches long, unless it be a branch from the base of the plant, when it should be pinched even with the other branches.

A box of loose soil is the best thing to root your cuttings in, as they can stay in this much longer than in sand. You can put them in the pots you wish them to grow in, but this will cause you additional trouble in caring for them, as they must be kept just wet enough so they will not wilt, and never very moist or they will rot. There is more danger of getting them too wet than too dry, and yet, when watered, the entire mass of soil should be moistened. Usually nature will attend to the watering with a little attention from you if you will set the box in a sheltered place where it will get the morning sun only, and where the wind cannot blow over it. If pots are used, bury them to their rims in the ground, or in a box of soil or sand before setting them outdoors.

You will want to take up your chrysanthemums in August, so it is well to begin to cut the roots around them so they will not wilt so much when they are taken up, and will go on growing with little check. If you are going to pot them in an eight-inch pot take a sharp knife and cut about two and a half inches from the base of the plant on opposite sides so that about three cuttings will make a complete circuit. In a week cut another section and then a week later finish cutting around. Fiber roots will start where the old roots are cut and you can dig a couple of inches outside of where you cut and disturb the root growth but little and the new mass of fiber roots will take hold of your new, rich soil and give splendid results. This same method can be followed in taking up any large plant.

L. H. Cobb.

TOO LATE TO CLASSIFY.

Hampshires—Bred sows $35. Spring pigs with pedigree $12 to $20 per pair. Galloway Farms, Waterloo, Ia.

BIG bargains that won't last long. Chester White hogs, St. Bernard dogs and Angora cats. Special prices 10 days. Howard S. Cooper, R.4, Wellman, Ia.

COST OF DRAGGING ROADS.

At the home farm in southeastern Nebraska there is a stretch of road, a half mile in length, that we have dragged for seven years. Only once during this period has this road been worked with anything but the drag. Two years ago the side ditches were cleaned with the common road grader.

A careful record of the time taken to keep this road dragged has been kept and for the first five years it runs as follows: Two trips for one man and one team requiring one hour's time for a single dragging is the basis taken. The first year we dragged it fifteen times, the second thirteen; the third seventeen, the fourth twelve, and the fifth fourteen times or seventy-one draggings of one hour's time during five years. This at thirty cents an hour for man and team is $4.26 a year for the half mile. For a mile it would be $8.52 annual cost of maintenance. Another road in the immediate vicinity cost less than $10 per mile annually. The soil is not quite as heavy as Red River soil, but the rainfall is a little more than thirty inches. A case is noted in Public Roads Bulletin 48, United States Department of Agriculture, where the cost of similar maintenance of roads in Arkansas was $11 per mile. State Engineer Gerhart, of Kansas, puts the range of cost for dragging at from $4 to $10.

The cost for North Dakota should not be over $10 per mile, while in most cases it would be much less, the cost depending upon the character of the soil, the rainfall, traffic and grade. As an average for all dirt roads I would place the annual cost of maintenance at $7.50 per mile or $460,740 to drag in a satisfactory manner the roads in North Dakota one year.

The total expenditure on public roads of North Dakota outside of towns in 1911 was $691,540. If properly organized and if the people were educated we could properly maintain our earth road with present road fund and have $230,800 left for bridges, new construction, etc.

The question of organization and legal procedure is a most difficult one. I well remember when a youth of fourteen years, merely large enough to drive our team of old steady mares, it was my privilege to work the foad and pay our road tax. This road work was a great delight to me at that time because usually the neighbor boys of my age worked with me with an equally efficient team of old plug horses. We never worked the old horses hard for two reasons: one was, their hide was tough and they wouldn't, and the other, they couldn't work hard if they would. My older brothers could handle a cultivator or a plow, so they worked at home. As I recall the road boss occupied his exalted position on a spring seat in the shade of a large cottonwood the greater share of the time. Nevertheless, we were there on time, unhitched at the proper time and drew the full wage of team and teamster. We didn't believe in it, but others did that way.—[C. F. Chase, professor agricultural engineering, North Dakota Agricultural College.

The assistance given to agriculture by the government of Uruguay is rapidly changing the interior of the country from a pastoral to an agricultural area. The results obtained do not compare favorably with the results in other countries, where the more modern methods have been in use for many years, but the Uruguayan farmers are not discouraged. Government aid is extended in the way of encouraging the planting of artificial forests, colonization, exempting from customs duties agricultural implements and machinery, seeds and binding twine; organizing contests of agricultural motors; creation of the office of agricultural defense and the engagement of experts in a number of branches.

SHORT-HORN EVENT EXTRAORDINARY

CHICAGO, ILLINOIS, JULY 29 AND 30, 1913

Dispersion of D. R. Hanna's Great Herd

125 Head---15 Bulls---All Scotch Bred

Not in recent years has there been a sale of Short-horn cattle where so many strictly high-class animals have been offered as will be presented in this dispersion of the Cottage Hill herd.

110 Scotch Females Will Be Sold, Including 30 Daughters of the Great Villager

Included in this lot of females are daughters of practically every Short-horn sire of note. They represent careful selection from the leading herds. The matter of price has never been considered when buying cattle for the Cottage Hill herd, and as a result the buying public will have an opportunity to make selections from one of the choicest collections of breeding matrons to be found in the country. Every female of breeding age has been served by either imported Villager or his show and breeding sons, Village Denmark and Village King.

15 Bulls Are Listed, 5 of Them Imported

Imported Villager and his sons, Village Denmark and Village King, will be sold, as will also imported Champion of Scotland, recently imported, and three young imported bulls. In addition there will be ten sons and grandsons of the great Villager. The greatest lot of bulls offered in years. Attend this sale. There will be cattle for every want. The catalog will be sent on application. Mention The Homestead and address

JOHN GARDEN, Manager - - - RAVENNA, OHIO

COLS. WOODS, JONES, REPPERT, and ALLEN, Auctioneers

Pfander's Midsummer Sale.

On August 13th, J. W. Pfander & Son, Clarinda, Iowa, will make their great midsummer sale of large-type Poland Chinas and it is conceded by all that they have one of the greatest herds of big Polands in this country. They have a great line up for this sale—a splendid lot of A Wonder fall and spring boars, every one of which is a good one and should be at the head of a good herd. Then there will be a number of great things sired by their other splendid boar, Big Ben, and some by their sensational young boar, King of Wonders. The latter boar is one of the real sensations in big-type Poland China circles, and he is conceded by all to be a good one. There will be fifteen sows in their sale that will be bred to King of Wonders, this 750-pound yearling boar and the breeder who gets one of these sows is going to have something that will help materially to make a reputation for their herd. Without going into details just now we will say that they are going to put up one of the best offerings of large-type Polands that has ever been sold from their herd and this is saying something, because they have had some great offerings before. A catalog will be sent you if you will only drop them a line and kindly mention this paper.

Sells-Swan & Ellis Sale.

One of the midsummer Duroc Jersey sales that is bound to attract attention is that of W. M. Sells and Swan & Ells, Indianola, Iowa, on August 6th. To those breeders who are going to want good herd boars for the coming year and to those who are wanting well-bred sows bred to some of the best herd boars in the West, then we will say get interested in this sale. Among the many good things to be sold in this sale will be eight head of sows bred to I Am A Crimson Wonder 2d, the champion boar at the Sioux City and South Dakota State Fair and one of the greatest breeding boars of all of the younger Crimson Wonder bred hogs. This hog stands at the head of the Swan & Ellis herd, and they will offer eight head bred to him, and Mr. Sells will have four of his best sows in the sale bred to him. Then there will be four boar sin the sale that are sired by Crimson Wonder Again, that sensational grand champion and sire of grand champion boars, and one of the greatest breeding boars of the past decade. Two of these boars are out of that phenomenal brood sow H. A.'s Queen and we candidly and firmly believe that these two are as good, if not better, boars than has ever before been produced by the mating of this famous sire and dam. These are something exceptional to those who are going to need a high-class herd boar the coming fall. There will be two very choice and growthy spring boars in this sale that are sired by I Am A Crimson Wonder 2d and these will be sought after by those who are looking for good spring boars. Two good May boars are sired by Crimson Wonder Again and these are out of Perfection Maid 3d, the dam of the Idaho grand champion boar, These are litter brothers to that boar. There will be four boars in the sale that are sired by Col. Gano and others by Wonder's Chief and L. E.'s Col. There will be three or four fall sows in the sale that are sired by Crimson Wonder Again and out of H. A.'s Queen and these are decidedly high class and are fit to go into any herd in the land. Both of these firms are cataloging some of the best things they have in their herds and you can take our word that there will be some things in this sale that should be sought after by our best breeders. If you want to be sure to get a catalog write either Swan & Ellis or W. M. Sells, Indianola, Iowa, and they will forward it to you just as soon as it is out. When writing them kindly mention The Homestead.

Ashby's Herefords.

One of the largest herds of Herefords today in the state of Iowa is owned by J. B. Ashby, Audubon, and he now has 186 head on hand. His herd is headed by Shadeland Lad 3d, a son of the noted show and breeding bull, Beau Donald 28th. This was one of the highest-priced bulls sold in the West last year. Mr. Ashby has about thirty head of young bulls on hand and a grand good lot of young heifers. He will make a public sale in February or the first of March at which time he will sell one of the best offerings that has been put up at auction in a long time. If any of our readers are interested in Herefords Mr. Ashby will be pleased to have them call and inspect the herd at any time and he will take pleasure in showing them to you.

Missouri Auction School's August Term.

The Missouri Auction School, now located at 1400-1404 Grand Ave., Kansas City, Mo., has issued one of the neatest catalogs that this thriving school has ever published. It is a condensed forty-eight-page booklet made as substitute to the large ninety-six-page catalog. It contains all the desired information regarding the school and the actual practice given each and every student. Colonel Carpenter has now been at the head of this school for eight years and it is his intention to uphold the reputation made in that time for turning out auctioneers ready to enter the field. The faculty that has proven so efficient in the past remains unchanged and those attending the August term will receive the benefit of the very best instructors in each department. Cols. Duncan and Harriman, who devote a part of their time to instructing and lecturing at each term, will devote more of their time to the August term, as this is not their busy season in the field selling for breeders. Those of our readers who are interested should send now for one of the new catalogs of the Missouri Auction School. Note page 21 for the advertisement and when writing for same kindly mention this paper.

CHESTER WHITE SWINE.

POLAND CHINA SWINE.

COOPER'S SPECIAL 30-DAY BOAR SALE

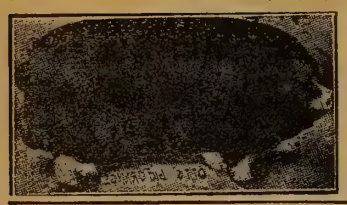
WE have over **100 head of boar pigs of spring farrow.** We have 25 sows to begin to farrow in 2 weeks. We must have room for them. Hence, for 30 days we are going to sell these boars at prices they will bring on the market next fall, and they will be worth $40 to $100 each as breeders at that time. They are all immunized. We guarantee safe delivery and record them at

25 DOLLARS EACH

They are sired by Big Expansion (the 800-lb. son of the noted Dorr's Expansion), Big Bone 2nd (weighing 900 actual pounds, a son of Big Bone), Chief Leader (weighing over 500 lbs. at 14 months old), and Ideal Chief, and other noted boars. **The dams are sows weighing from 500-lb. yearlings up to sows of over 800 lbs.** If you are in the market for the biggest blood lines, from big sires and dams, send your check, tell us the kind of pig you want and we will send him or return your money. You will not buy such boars, such breeding, at the price again this year. Buy your boar now and save 20 to 50 dollars on him.

W. H. COOPER - - - - - - - - - - **HEDRICK, IOWA.**

BIG BONE 2d 161497.



J. O. JAMES' SENSATIONAL PIG BARGAINS

I WILL book orders up to 100 head of spring pigs sired by my half-ton, **Big Orange, Ott's Big Orange,** who weighed 700 pounds on the scales just turned 19 months, **Big Sensation, Big Orange's King, A Wonder Giant** and **Gritters' Best.** All strictly big-type boars and out of extra big, long, heavy-boned matchless sows, many of them weighing from 700 to 800 pounds. These sows averaged 9½ pigs to the sow, many of them 10 to 13 pigs. I want you to write, describing just what you want. It makes it easier to pick the pig that will suit. I am pricing these pigs low for quick sale for July and August delivery, or for orders booked during July, or while they last. Must be bought during this month to get special price on them. Many of these pigs will be worth $100 to $150 by October. You can save from $75 to $100 by buying now. The early buyer catches the bargains. The dams of these pigs are sired by Big Orange, Big Sensation, Pawnee Nelson, Long King's Equal, Big Ex and Longfellow Jr. You can't beat sires, dams, pigs or prices. We guarantee our pigs to be as represented. Let me hear from you at once as orders are coming fast. Mention Homestead when writing. **J. O. James, Braddyville, Iowa.**

C. F. Adams' Big-Type Poland Chinas

I WILL sell spring pigs sired by my great herd boars, **Big Halvor** (generally conceded to be one of the very best big-type boars in Iowa), **Maid's Halvor 1st,** a son of **Big Halvor** and out of the mammoth sow, **Long Maid,** and one of the grand young boars of the breed, **Mammoth Jumbo,** a son of the noted **Big Jumbo** and **Grand Chief,** bred by John Miller. These pigs are out of a herd of

Sows That Cannot Be Surpassed for Size and Quality

These sows are bred in the purple, many of them being sired by the great sire, **Big Halvor,** others by **Coming Wonder, Big Nelson,** etc. I know I can please you in a pig and that you will be more than pleased with the manner in which they develop. These pigs will be worth three and four times what I am asking for them within the next year. Write me for prices, mentioning Homestead

C. F. ADAMS - **OWASA, IOWA.**

BIG-TYPE POLAND BOARS

20 FALL BOARS sired by the 1,000 pound Mastodon Chief and Tecumseh Prince, 2 yearling boars by Mastodon Chief, and some good spring boars by Mastodon Chief, Big Jumbo 2d and Mastodon Wonder. The fall boars are a good bunch and are priced right. Mention The Homestead when writing.

E. W. KREISCHER, MT. VERNON, IOWA

Faulkner's Famous Spotted Polands

"Are Leaders of Their Kind."

150 May and June pigs now ready to ship. The special price of $35 single, either sex; $65 pair, no akin; or $90 trio, no akin, will sell them all in the next thirty days. Start right with the kind of our forefathers. Mail your check with first letter. Everything registered.

HOMER L. FAULKNER - Owner Highview Breeding Farm - JAMESPORT, MO.

Fall Poland China Boars

I HAVE now for sale the best lot of fall boars I ever raised. They will weigh from 250 to 275 pounds. I have spring pigs weighing 75 pounds or better. These boars are sired by Pawnee Expansion and R. C. Pawnee Lad. The fall boars will be sold at $35 and $40 each, crated and ready for shipment.

JOHN I. DRIPPS - - SPRINGVILLE, IA.

LAWSON'S SENSATIONAL BIG POLAND CHINA BARGAINS

THE home of the noted breeding boar, **Long King's Equal** (weight 965 lbs. in breeding condition, weighed in the presence of forty breeders). Sows bred to him and **A Wonder's Jumbo** for fall litters. **150 Choice Spring Pigs** that I am now offering at private treaty. Will not hold fall sale and will sell these out privately at less than half the money they would bring in a sale. Now is the time to get your bargain while the good ones are here. Write me at once for description and prices and mention Homestead.

JOHN B. LAWSON - - - - **CLARINDA, IOWA**

BIG-TYPE POLANDS

OF the thick, smooth, heavy-boned kind. Fall and spring boars and gilts sired by Dale Expansion 190135. Also choice sows bred to him for fall litters.

F. E. JACKSON, HURLEY, SO. DAKOTA.

AUGUST GORDER'S POLAND CHINAS

A FEW choice fall boars sired by Teddy by the champion, Big Mischief. A nice crop of pigs sired by Futurity Jack and Matchless Expansion. The sow herd is by such sires as the 1,000-lb. Centennial, Colossus, Big Victor and other noted big boars. Address today and mention The Homestead.

AUGUST GORDER, **PLATTSMOUTH, NEB.**

GOOD LUCK HERD POLAND CHINAS

WE are offering big-type September boars and gilts for sale sired by Giant Wonder 184793, and a few extra good gilts bred for September farrow to F.'s Longfellow. Will ship on approval and prepay express charges. Satisfaction guaranteed. Write for descriptions and prices.

L. S. Fisher & Son, R. 1, Edgewood Iowa.

Meinhold's Big Polands

SPRING pigs by Big Jumbo, a grandson of Wade's Jumbo, Pud's Wonder by A Wonder, Nelson Tec. and a few others. This stock is big and well bred and goes at farmers' prices.

H. C. MEINHOLD, STROMSBURG, NEB.

BAIRD'S MAMMOTH POLAND CHINAS

THE great sire Columbus, without doubt the greatest big boar in existence, is in service. Sows of mammoth build and of the richest breeding make up the herd. We would like to hear from you if interested in extra good ones. Mention The Homestead and address **R. B. BAIRD, Central City, Neb.**

12 HIGH-CLASS POLAND CHINA FALL BOARS

I AM offering 12 strictly choice fall boars sired by the great 950-lb. boar, **Pawnee Nelson,** that is regarded as one of the greatest living Poland China boars. These are out of 600 and 700-lb. sows. Price $40 to $50 for quick sale. Address, mentioning The Homestead, **A. H. Windom, Nodaway, Iowa.**

BIG POLAND CHINAS

WE maintain a herd of big Poland Chinas of the very best blood lines. We are booking orders for spring boars; some of these are excellent. Drop us a line for prices and full descriptions. Address

Pitz & Adams, Plattsmouth, Nebraska.

RED POLLED CATTLE.

YOUNG BULLS

RANGING in age from Sept. 1912, to three months old. Heifers bred or open. Write your wants or come and see them. Farm reached either from Clare on M. & St. L. or Barnum on I. C.

FRANK J. CLOUSS - BARNUM, IOWA

BIG HERCULES

ONE of the very biggest of all the extra big ones is at the head of our Poland China herd. In our Oct. 23rd sale we will offer a few sows either bred or with breeding privilege to this boar. We have an extra select line of spring boars that we will offer at that time. They are by the great Gold Medal. Let us tell you of these big Polands.

J. T. R. NASH & SON - - - - - **MINDEN, NEBRASKA**

RED POLLED BULLS

A few very choice bulls, some of them by the great Happy Jack 2d, without question one of the very best of the breed. Order today, or write for full description and prices. Mention The Homestead and address Luke L. Wiles, Plattsmouth, Neb.

OLD-FASHIONED SPOTTED POLAND CHINAS

SIRED by three of the largest boars of the breed. Spring pigs, either sex, now ready to ship. $25.00 to $50.00. Best breeding, highest quality.

J. D. Gates & Sons, Ravenwood, Mo.

LINE BRED EXPANSION BOARS

SEVERAL suitable to head Poland China herds; others good farmers' boars. A few sows bred for fall litters. Mention The Homestead and address

BELGIAN EMPORIUM OF AMERICA.

A CHOICE collection of Belgian stallions and mares constantly on hand. Several importations annually. Catalog on application. Address
HENRY LEFEBURE - FAIRFAX, IOWA.
Eight miles west of Cedar Rapids.

Purchase Percherons

NOW is the time to buy Percheron mares, with foals at foot, rebred for 1914 foals.
BUY THREE IN ONE
See the mares in pasture or infield work.
See the kind of colts they are suckling.
You can buy more intelligently now, than any other time of the year. For information, and full lists of Percheron Breeders, address Percheron Society of America, **Wayne Dinsmore, Sec'y. Union Stock Yards - - Chicago, Ill.**

STALLIONS

Home-bred draft stallions $250 to $650. Guarantee to sell you imported stallions for less money than any firm in America. Come to a live stallion market and see all draft breeds.
A. LATIMER WILSON, Creston, Iowa.

PALESTRO I. 52027(67506) will make the season of 1913 at my farm 2 mi. east of Garner, Ia. Palestro I. is a black sired by Mon Jarret(47526) by Theudis, by Besigue, by Brilliant III. and dam traces to Brilliant III. Write for terms. Henry Moll, Garner, Iowa.

FINE spotted Shetland stallion, 7 years old, 40 inches, sure foal getter: first check for $150 takes him. Also one yearling spotted stallion colt and two filly foals almost old enough to wean. Guy J. Pote, Bridgewater, Iowa.

AN EXTRA LOT OF YOUNG CLYDESDALE

STALLIONS that I will sell at right prices. Address R. O. Miller, Route 1, Lucas, Iowa.

SHETLAND PONIES

STRICTLY choice lot of stock, best of breeding and attractive prices. C. S. Bratt, Arapahoe, Neb.

300 **SHETLAND and Welsh ponies** for sale, all ages, including prize-winners. Write us your wants. **T. S. Simpson & Sons,** Aurora, Ill.

When writing to advertisers please mention The Homestead.

McLAY CLYDESDALES MAKE GOOD

McLAY BROTHERS,
Janesville, Wisconsin

PERCHERONS

Ever notice average farmers who keep their own stallions raise more colts from same number of mares and make more horse money? **A Big Percheron** from my 13 young Reg. studs at breeder's prices would make you money.
FRED CHANDLER
Chariton, Route 7, Iowa

Percheron Mare For Sale

A DARK gray four year old, weight 1,500 lbs. A good worker, one of the wide, thick, heavy-boned kind and sound. Recorded. No better bred one in America. Guaranteed a breeder. Price $500.
AMOS HANSON - - - COLLINS, IOWA

MULE-FOOTED SWINE.

Mule-Foot Hogs

Oldest breeder in the State. Pedigreed stock for sale
Samuel Johns, Sec. A., Wilmington, Ohio

350 QUICK growing, hardy, healthy, mule-foot hogs for sale from America's champion herd. Also ponies. Jno. Dunlap, Williamsport, O.

POLLED DURHAM CATTLE.

WAYSIDE POLLED DURHAMS, Poland Chinas. Wayside Victor, roan, Scotch bred 3 yr. olds, and calves 6 to 12 mos., choice big-type fall pigs, either sex. E. J. Augspurger, Pulaski, Ia.

A. S. ALEXANDER, V. S.,

MADISON, WISCONSIN

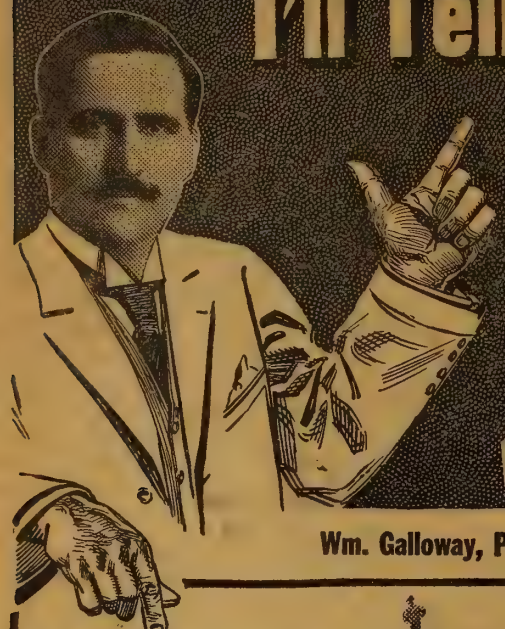
CONSULTING VETERINARIAN. Advice and prescription by mail $1.

I'll Tell You How to Save $250-$350 On a Galloway Heavy Duty Engine

7½—10—15 H. P. for Running Any of Your Large Power Machines

Write Me Today!



Wm. Galloway, Pres.

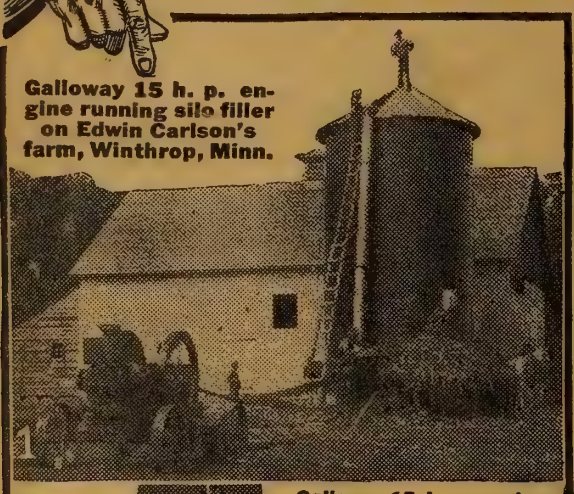
15 H. P. Galloway Horse Portable Engine

That's talking **big money but real money talks big.** I'll back up every statement when I tell you that you can actually save $250 to $350 on any Galloway Heavy Duty (7½ — 10 — 15 H. P.) Engine that you select from my line. It's an absolute fact and I can prove it to you in a flash when you get my offer.

Take my 15 H. P. Portable shown in the picture. **I sell it for half what you'd have to pay for a trust-made engine of the same power.** I said I'd prove your saving on any engine. All right, just drop me a line and I'll send you my big, illustrated engine catalog and Special 90 Day Price Offer. If anybody else wants to sell you an engine, **show him my prices and dare him to meet them.** I positively know that there isn't a single manufacturer in America who can meet my prices without losing money. My tremendous output and the direct selling plan that I have built up, make my low prices possible. When you buy a Galloway you pay just the bare cost of material and labor with only one small manufacturer's profit added. Compare that plan, backed by years of proved success, with the Trust way of adding four to six profits and you see how easy it is for me to save you $250 to $350 on your engine or your complete outfit. Now, I just want you to **investigate,** that's all. It's money in **your** pocket—**big** money. Write me a postal or a letter for my big engine catalog today. Remember, these engines are made in sizes from 1¾ H. P. to 15 H. P., either stationary or mounted, and are

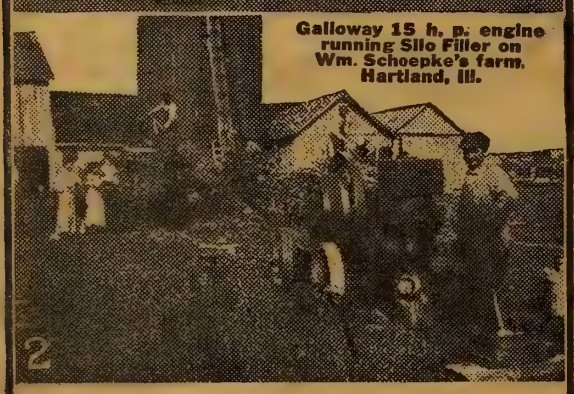
Sold Direct from My Factory to Your Farm

All Galloway Engines are made right in our own big chain of factories at Waterloo. There are no better made engines on the market. Galloway Engines are easy to start. Will run without attention as long as you want them to. Use less fuel per horsepower than any other engines on the market. They are proved engines. Over 30,000 in use today and all sold with the privilege of testing them 30 days on your own farm before you decide to keep them, backed by a five year warranty on materials and $25,000 legal bond. Every user of a Galloway Engine is a booster for them. That's why we sell more of them than any other concern in the world selling engines direct to the user. Isn't that proof enough that it pays to buy the Galloway and save from $250 to $350.



Galloway 15 h. p. engine running silo filler on Edwin Carlson's farm, Winthrop, Minn.

1



Galloway 15 h. p. engine running Silo Filler on Wm. Schoepke's farm, Hartland, Ill.

2

Get a Complete Galloway Silo Filling Outfit and Save Big Money

Remember, I can sell you complete Silo Filling Outfit, Shredder, Big Corn Sheller, Irrigation Pumping Outfit, Corn and Grain Elevator and Dump, and many other big combination outfits—all at money-saving prices. Just write me and tell me what you want and let me quote you the lowest prices ever made on these outfits. Write me without fail today for my complete Silo Filling Outfit. Hundreds in use and all giving complete satisfaction.

Free Service Department

My free Service Department, composed of the best engine experts, will give you all the information you want for the proper installation and use of your engine. They will tell you the best size engine to buy for handling your different machines, size pulleys, etc., and how to equip your engine for doing the best possible work This service costs you nothing, but is worth a great deal to you.

Here's the Real Proof

I just want you to look at these five illustrations here, showing 15 H. P. Galloway Engines at work in different sections of the country, running ensilage cutters and threshing machines. These are only a few of the many views of Galloway Engines at work running different machines, which we have on file. My big Engine Book shows a lot more. Sent FREE.

View No. 1 shows 15 H. P. Galloway Engine filling silo on Edwin Carlson's farm at Winthrop, Minn. Notice how smooth the engine is running in picture and without any attention. No. 2 shows a 15 H. P. Engine running a 20 inch cutter filling 16x32 silo on farm of Wm. Schoepke, Hartland, Ill. Mr. Schoepke said it took them only twelve hours, refilling and all, and that he filled four silos last fall. He paid for his engine the first year doing work for his neighbors at $10 to $15 a day. Good money to be made with a Galloway Heavy Duty Engine everywhere.

View No. 3 shows a complete Galloway Silo Filling Outfit on Mr. Galloway's own farm at Waterloo filling two twin hollow-block silos, each 50 feet high. How's that for silo filling? The pipe is 54 feet long. No. 4 shows Galloway 10 H.P. Engine running threshing machine on Walter J. Anderson's farm, Newman Grove, Neb. Mr. Anderson says, "I put it to hard work and it did fine. I had two other kinds but yours beat them." No. 5 shows a 15 H. P. Galloway Engine running threshing machine on W. H. Stuckmeier's farm near Waverly, Iowa.

Write for Catalog and Prices Today

Write me first. Get my 90 day special prices before you buy any other style or make of engine. It will be the best investment you ever made. I am selling more Heavy Duty Engines than ever before in the history of this big business because the men who have bought and used Galloway Engines are helping me sell them. Galloway Engines are their own best advertisement.

Remember, if you want a small pumping engine, or medium sized engine, I can supply you at a big saving. We make all sizes from 1¾ to 15 H.P. New Pumping Engine Catalog just out. Let me send you a FREE copy.

Get My Special 1913 Offer

Then as a clincher I am making the most liberal 1913 Co-Operative Profit Sharing Offer I have ever made, which is a tremendous, big inducement for you to buy the Galloway. It will actually help you get your engine partly or entirely without cost to you in the end.

Just mail me a postal or letter for my big illustrated engine catalog and I will give you all particulars of this special offer by return mail. Write me today. Do it before you lay this paper down. Address

IN HAYING TIME

These Japanese characters translated into English mean: "Two Necessities in Every Home."

Kyohei Inukai is a Japanese artist. He was born in Japan—educated in America. Inukai's fame will be world-wide in the not far future because Inukai artistically is a wonderful product of the Orient. The example of his work shown on this page, illustrates his directness of vision in voicing the message of Montgomery Ward & Company's Catalogue. When asked to convey through his art the idea behind the great Ward book of bargains, he sent in this drawing and over it he wrote in Japanese and English these words:

"Two Necessities In Every Home"

Everybody knows that the first necessity of every home is a Baby—a boy or girl, or a bunch of both. The Baby is the monarch absolute of every fireside where he sets up his throne and goes forth with ruthless hand to slay a fond mother's ribbons and put dents in Daddy's derby. How much more you feel the responsibility of home-keeping when the little fellow comes—How much more you appreciate the things that help the home, that beautify the home, that economize for the home—that help the home to prosper—for Baby's sake.

Yes, you deeply, fully lovingly appreciate that other necessity, the big, complete, varied, serviceable, convenient Saving Book of Ward's—the Catalogue of 1913—which is a boon to baby, because—

It helps father's money to go further—

It helps mother to get more of the things she wants—

It helps the home because it contains the things, the home ought to have at prices that mean Economy in the home.

In a thousand pages—a veritable wonderland of bargains—it spreads out before you all that you need, all that you can use, with a full measure of honesty and prices so low that they double and triple the purchasing power of every purse.

This Catalogue of 1913 is the triumph of 40 earnest years of service—to several generations of thousands of families—now extending to millions a complete shopping guide to the best merchandise of the world. The more you use it, the more you will become attached to it, the more it will prove a positive necessity in your home.

Although these many years, the work of thousands of people and hundreds of thousands of dollars have been necessary to make this great Catalogue of 1913 possible, yet it costs you not a penny. Its helpfulness, its economy are yours just by cutting out the coupon on this page, signing your name to it and mailing today.

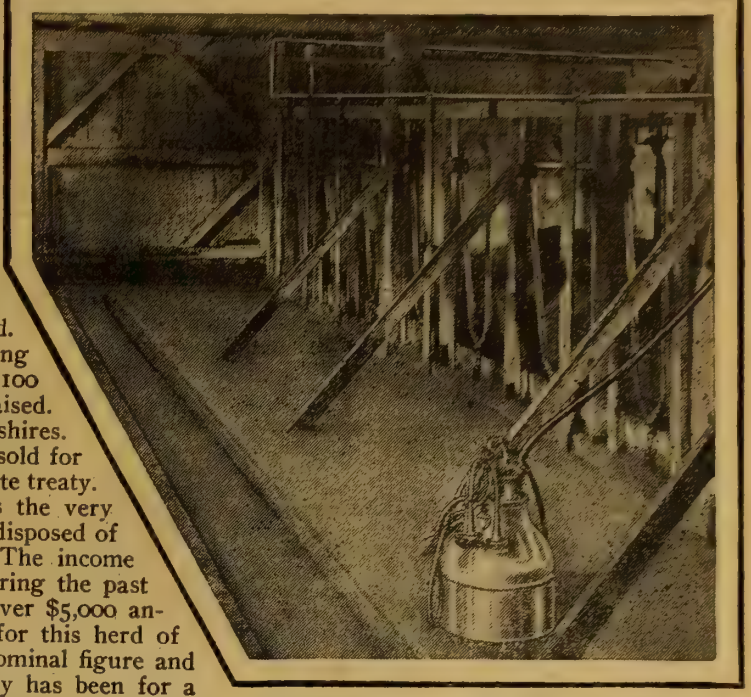
Opportunities of the Good Farmer

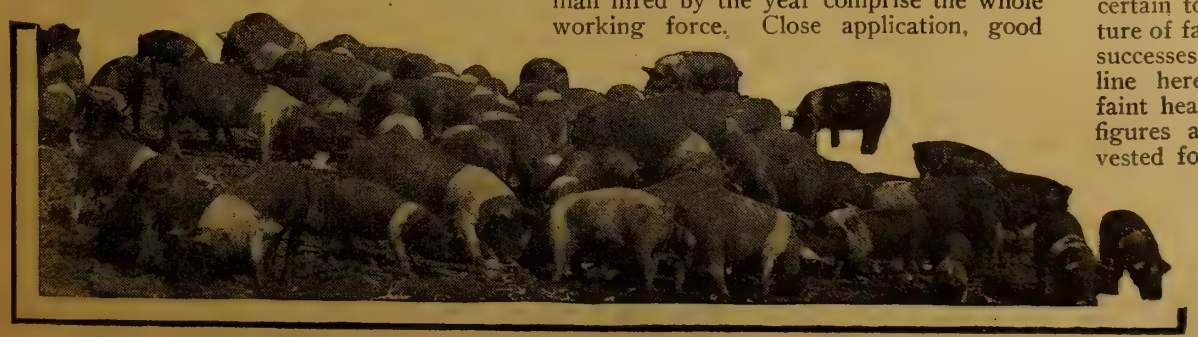
A Combination of Dairying and Swine Raising That Solves the Far-Reaching Problem of Profit Making on High-Priced Grain-Belt Land.

THAT the sow and the cow are the basis of American agricultural prosperity is a trite expression frequently made by the veteran live stock auctioneer, Col. F. M. Woods. It is certainly true that so far as profits are concerned, dairying and swine raising on the corn-belt farm form a combination that is hard to equal. On a Whiteside county (Illinois) farm, of 200 acres, this method of live stock farming has proven both satisfactory and profitable. Beginning a few years ago with a few high-grade Holstein-Friesian cows, a continued use of pure-bred bulls of approved dairy type produced such results as to stimulate a desire for a herd of recorded animals. Three years ago several pure-bred cows were added to the herd. At the present time twelve of the twenty-two cows in milk are registered animals, and with the young heifers it will be but a short time until the grades will be disposed of and the entire herd will consist of pure breds. The whole milk is sold to a condensary. The cows in this herd have averaged $146 per head during the past year. This is exclusive of the calves from the pure-bred cows which are valued at $100 each when one year old. The silo takes an important place on this farm in furnishing succulent feed for the cows during the winter months, as well as in the late summer when pastures are dry and short. Last year five acres of alfalfa were sown and an excellent stand secured. The first cutting was made on June 9th, and ten and one-half tons of excellent hay were taken off the five acres. This large yield is an excellent indication of the results that will ordinarily attend a thorough preparation of the soil before sowing alfalfa. The land was treated with inoculated soil, ground limestone, ground phosphate and stable manure, and the physical condition of the soil was made ideal by thorough disking and harrowing. Another field of the same size will be sown this year and it is estimated that the ten acres will produce from fifty to sixty tons of hay per year. The cost of operation on this farm has been reduced to a minimum by practical labor-saving machinery. A milking machine has been recently installed with which the twenty-two cows can be milked in an hour, and with a greater degree of cleanliness than if milked by hand. One hundred to 150 spring pigs and seventy-five to 100 fall pigs are annually raised. They are pure-bred Hampshires. The best of the males are sold for breeding purposes at private treaty. At annual bred-sow sales the very choice of the females are disposed of at remunerative prices. The income from the swine raised during the past few years has averaged over $5,000 annually. The foundation for this herd of swine was secured at a nominal figure and since then the main outlay has been for a high-class herd boar every year or two. The work horses of the farm are pure-bred Percherons, and there is an added income from the four or five colts raised each year.

With the exception of the concentrates, such as oil meal, bran, etc., practically all of the feed for both cattle and hogs is raised on the farm. This shows how one man makes a 200-acre farm produce an annual income of from $8,000 to $10,000 at a minimum cost of operation. The farm above referred to is owned and conducted by Mr. A. L. Goodenough, and every detail receives his careful attention. A son and one man hired by the year comprise the whole working force. Close application, good judgment, hard work and unquestioned integrity have been largely responsible for his success. Some people entertain the idea that the opportunities on a farm are not what they were some years ago when land was cheaper in price. We do not believe this. It is largely up to the man to make use of the opportunities within his reach, and if the man of today will do so, his chances for success are fully as good, if not greater than ever before. The last word in farming possibilities has not been spoken. Opportunity beckons forward today as never before. What Mr. Goodenough has accomplished, in so remarkably a successful manner, is possible to others, provided the same factors of determination and scientific attention to details are present. The grain belt is just as full of remarkable instances of big financial returns from careful farming as any part of the country. Given the personal element of determination, well-selected soil, well-bred animals and careful attention to details, both large and small, and the 200-acre farm, whether it be in Iowa, Wisconsin or Oklahoma, is almost certain to yield profitable results. The future of farming is bright with promise, such successes as the one narrated, in merest outline here, being encouragements to the faint hearted and the dubious. There are figures aplenty to show that money invested for good stock is sure of profitable returns, as Mr. Goodenough's success should suffice to show to the most skeptical. Careful attention to scientific methods will hardly fail to duplicate his success. The continued prosperity of the American farmer depends upon just such farming.



MILKING MACHINE AS AN ECONOMICAL FACTOR.



THEY MAKE A PROFITABLE SIDE LINE ON THE DAIRY FARM.

THE HOMESTEAD

A PRACTICAL JOURNAL for the FARMER, STOCKMAN, FRUIT GROWER, POULTRYMAN, GARDENER, and HOUSEKEEPER

BY JAMES M. PIERCE

Address all communications and business letters to THE HOMESTEAD COMPANY, Des Moines, Iowa.

WIDE ADAPTABILITY OF THE SILO.

An Iowa subscriber raises an objection to some of the arguments that are advanced in favor of the silo. He states that the erection of a silo means that one must practically get into a rut on his farm affairs. In other words, if he has a silo he should fill it every year and having it filled it is necessary to keep enough stock to consume the contents. According to his views it is often a bad business venture for a farmer to buy enough cattle in the fall to consume the contents of a silo and yet where one is erected this policy must be carried out as if by compulsion.

To our way of thinking this is taking rather a narrow view of the case. To be sure those who go to the expense of erecting a silo should first make up their minds that they will carry out a policy that involves the keeping of considerable live stock. It does not necessarily mean, however, that the same policy must be pursued year after year, but as a matter of fact there is opportunity for very great changes in farm practice and still a part of the corn crop be used in the form of ensilage most economically.

We have in mind an instance where a very large silo was filled last fall, the owner in this case having on pasture at that time someting like 180 cattle. It was his intention to feed them a heavy ensilage ration during the winter and a half feed of grain daily and to finish them up on grass this spring. His plan was interferred with when he was offered last fall what he considered a good margin on these cattle as feeders. This he accepted and as a result that silo is full of ensilage today. He expects to begin feeding it some time in July and hopes to make economical gains on thin cows and rough, cheap cattle which he is now buying.

Market conditions may justify men at times in changing from the policy of beef raising to dairying, but the silo fits as well into one branch of farming as the other, furnishing as it does the cheapest and most palatable form of roughage that is available on the farms of the corn belt. As we see it no farmer need hesitate about erecting a silo for fear that he will want to change his policy and therefore in the future have no use for this form of equipment. As we said in the beginning we now repeat that it is assumed before a silo is erected that there will be an adherence to the carrying out of some live stock policy and that being the case it may be remembered that the silo in its adaptability meets the needs of a very great variety of conditions.

FEEDING RYE.

Taking up the subject of "Handling Hogs on Pasture," recently treated in this paper, A. T. McCallister, of Pendleton, Indiana, writes:

In a recent issue of your paper I notice an interesting article on the subject of blue grass, timothy and other pastures for hogs. In that article you recommend rye. Please advise me (1) if in feeding ground rye as a slop it will pay better to have it ground fine and fed with the slop or, (2) would it be better to sell the rye and buy ship stuff? (3). Is it best to mix bran with rye flour for slop? (4) Please give me a good recipe for mixture for spraying pigs for mange or lice. I keep from twenty to twenty-five brood sows and as they are an extra brooding strain, they raise two litters a year. Following this plan I have found it advisable to push my pigs from the start and get them in shape for market at the earliest possible time so that in case of suspicion of disease we can get them to market quick and avoid losses. It takes lots of slop to do business this way, but I think it pays.

(1) If rye is ground it would be better to grind it in an ordinary feed mill rather than as a flour. Tests have shown that rye meal is a trifle less valuable for hogs in the form of slop than is cornmeal fed in the same way. (2) Whether or not rye should be sold and other feed purchased depends upon the relative price of the two feeds. If corn is not available to mix with your slop it would be preferable to feed wheat middlings with it rather than ground rye pound for pound. If rye is fed it should always be ground and given in the form of slop if best results are to be secured. (3) No. (4) Any of the coal tar preparations or any of the dips advertised will answer your purpose as a spray. A cheap preparation is crude oil with just enough carbolic acid to give a good strong odor.

NEED OF SCALES ON THE FARM.

Almost every day we are able to cite some instance of where scales on the farm would have saved the farm owner many dollars. Only the other day we were told of one farmer losing 400 pounds of weight on a bunch of cattle "lumped off" to a buyer. Of course, in this instance, a farmer selling stock but seldom and seeing the different classes weighed only occasionally stands little chance with a buyer who is weighing stock nearly every day in the year, therefore becomes expert on guessing weights.

But scales on the farm do away with guessing weights. One is able to know then without guessing, and a price may be put upon stock whenever a buyer comes around based upon an actual weight basis. This applies to cattle that are sold at so much per head or that are "lumped off," quite a common way of selling all but the best finished corn-fed cattle. Nevertheless, the buyer figures on price per pound and the probable weight of the animal, which is the way every animal is sold on the city market, and it is the way every animal should be sold on the farm. The habit of "lumping off" is stopped as soon as scales are on the farm, and the farmer with much stock to sell soon makes back the price paid for his scales if he has much stock to sell, and particularly if he has been guessing at the weight with a buyer more adept at guessing than he.

In addition to keeping the buyer straight in the matter of weighing, scales on the farm work to the owner's advantage in another way, that of telling him how a bunch of cattle or hogs he is feeding are getting along. Many times scales to tell of the gains being made will stop a feeder from selling just when he is securing the best gains, or cause him to sell sooner than he intended because of poor gains that would scarcely be detected without the scales. A pound of pork or beef is worth money now and never will be low in price again, so scales to keep close account of weights mean more than ever before.

THE HARVEST PRICE OF WHEAT.

We heard a great deal about the low price of wheat at harvest time, and of the profits of storing wheat to sell later, at a better price. Sometimes it turns out to be very profitable to hold wheat for five and six months before selling, and again the most is obtained by selling directly from the thresher. All depends upon market conditions of the fall and winter and of the new crop prospects from the middle of winter on until another harvest time. Often the claim is made that a low price is established by millers, elevator owners and buyers in general at harvest or threshing time, knowing that a large per cent of the wheat raisers must sell at that time because they have no storage room for their wheat out on the farms. Again, the old-time story of needing the money as soon as possible to obtain it from the sale of the crop is brought out as a reason for pushing the crop on the market. At any rate, one never can be sure at threshing time whether the most will be made by holding the crop to sell later or whether it would bring the greater return to sell as soon as threshed.

There are a few things to be considered about holding a crop of wheat in the bin for some months before selling. In the first place there is the storage room needed. While we do think every wheat raiser should have considerable storage room for wheat on his farm, to build at once enough to store an entire crop is a considerable initial expense in these days of high-priced building materials. If it can be arranged so the room can be utilized for other purposes when not filled with wheat the expense does not seem to fall so heavy. But there is the cost of storage room first to be considered, then the insurance on the grain itself, for no one should hold so valuable a crop as wheat in the bin without insurance covering loss by wind and fire. Interests on the value of the grain is another item and shrink in weight is still another. All these add to the cost of holding wheat in the bin, and yet there are many, many times when the advance in price much more than cover everything, leaving a nice margin of profit besides.

VALUE OF BUTTERMILK FOR HOGS.

A Wisconsin subscriber, Mr. C. J. Griffing, gives his experience in the feeding of buttermilk to growing pigs in the following communication:

Many people who bring their milk to a creamery can have the buttermilk left after making butter, for hog feeding if they wish. Some people call this "slop" and refuse to feed it to their hogs. This buttermilk when fed while fresh, that is, within a day or two of churning, has a high feeding value and is indeed far from slop. Many farmers do not get satisfactory experiences with buttermilk because they try to make an exclusive ration of it. Such a plan is absurd for it is a well-known fact that an exclusive ration of any one feed will not produce satisfactory results in feeding any class of animals. If this faulty plan is followed results are sure to be unsatisfactory, for buttermilk is very bulky, very rich in nitrogenous elements and too constipating for exclusive feeding. The latter is really the serious fault from which most of the trouble comes and one, too, which seems to be usually overlooked. This comes from the fact that the pigs relish the buttermilk so much that one is liable to feed too much. If this is done with pigs weighing less than seventy-five pounds I have found that it is almost sure to cause bowel trouble. I find that hogs weighing 120 pounds or more if brought to it gradually can take much more buttermilk without apparent evils, but I do not find it economical to feed ore than five pounds of buttermilk to one pound of grain. Best results are obtained when only three pounds of this milk is fed to one pound of grain. When fed in this proportion the buttermilk is two or three times as valuable as when fed in the larger proportion. Buttermilk produces bone and muscle and when fed too largely there is too much growth without attendant fattening. When the pigs are ready for finishing for market the buttermilk ration may well be cut down still more to promote fattening. Corn is a cheaper and better feed for this fattening process. I feed twice daily and aim to be as regular as the clock. It is a mistake to feed the grain ration first. The buttermilk should all be consumed before feeding the grain. If the grain is fed first the buttermilk has a tendency to wash it out of the stomach and results from the feed are not as good, since the digestive juices of the stomach do not get a chance to act upon the grains. No one who raises hogs should despise the feeding value of buttermilk, for if handled intelligently, or perhaps I had better say, sensibly, results are sure to be good.

Too much emphasis cannot be placed on the importance of the advice given by Mr. Griffing, more especially in regard to the use of buttermilk in too large quantities. Because it is a cheap product, which it is in some communities, the attempt is often made to use it to take the place of grain entirely, but this is a blunder which no man will make the second time. It is our hope that it will not even be made the first time by those of our readers whose attention has been called to this communication.

A little care is needed in starting a bunch of shoats on buttermilk and we have found from practical experience that there is no better plan than that which requires the soaking of corn or other grain in diluted buttermilk for a period of twelve hours before feeding. If fed in this way for several days the bowels seem to become accustomed to it so that when it is fed in its pure state no injurious effects will be apparent.

BEE KEEPING.

Bee keeping may be made a division of farm operations in practically all sections in which general farming is followed. In many localities so little attention is paid to it that bees are practically unknown. Such is probably the case at Harvey, North Dakota, from which place a subscriber writes as follows:

Would you kindly publish an article on bees? What crops should a farmer grow from which they might gather honey?

Bee keeping, like most lines of work, has its peculiarities, and while there is no work connected with it that may not be done by anyone of ordinary intelligence, the best results are obtained by those who are particularly adapted to it.

The start must, of course, be made by the purchase of one or more hives of bees. The beginner should insist upon the gentler varieties—Italian, Carniolans or Caucausians. The first named are more popular, though the second have the best reputation for gentleness. The native black bee or its crosses should be avoided because of viciousness. The bees should be established where the hot sun of the middle of the day will not strike them. The hives should be set up off the ground so as to give circulation of air beneath them. A few inches will be sufficient. Weeds should not be permitted to grow up around the hive. The better hive is the angstroth pattern, which, with other supplies may be purchased from bee keepers supply houses. About the only requirements for the farm apiary are a smoker and a bee veil, with extra sections.

It is best for the beginner to start in the spring with a single hive—a good, strong one.

Bees should be handled so that they will be little disturbed in their work. As much as possible, stings should be avoided during manipulation. This is true, not so much because they are painful to the operator, but because the odor of poison which gets into the air irritates the other bees and makes them more difficult to manage. For this reason it is most advisable to wear a black veil over a wide-brimmed hat and to have a good smoker. Gloves, however, are usually more an inconvenience than otherwise. Gauntlets or rubber bands around the cuffs keep the bees from crawling up the sleeve. It is best to avoid black clothing, since that color seems to excite bees; a black felt hat is especially to be avoided.

Superflous quick movements tend to irritate the bees. The hive should not be jarred or disturbed any more than necessary.

The best time to handle bees is during the middle of warm days, particularly during a honey flow. Never handle bees at night or on cold, wet days unless absolutely necessary.

Before opening a hive the smoker should be lighted and the veil put on. A few puffs of smoke directed into the entrance will cause the bees to fill themeselves with honey and will drive back the guards. The hive cover should be raised gently, if necessary being pried loose with a screwdriver. When slightly raised, a little more smoke should be blown in vigorously on the tops of the frames, or if a mat covering for the frame is used, the cover should be entirely removed and one corner of the mat lifted to admit smoke. It is not desirable to use any more smoke than just enough to subdue the bees and keep them down on the frames. If at any time during manipulation they become excited, more smoke may be necessary.

It is scarcely worth while to try to raise crops especially adapted to honey making. Alfalfa, sweet clover, white clover and alsike clover are all good honey bearing plants. Buckwheat ranks high. Honey is produced by all fruit blossoms by rape, mustard and a wide range of fall flowers.

In the latitude of the inquirer bees are best wintered in a cellar or cave built for that purpose. Our subscriber may obtain much valuable information from Farmer's Bulletin 447, which may be secured by sending a request to superintendent of documents, Washington, D. C.

Use kerosene instead of oil on the sickle-bar of the mower or binder. It will prevent gumming.

ROAD COST PER ACRE.

Governor Hodges, of Kansas, gave a good illustration of the value of good roads to the farmer, in dollars and cents, in the course of a recent speech in his state. He began by calling the attention of his auditors to the fact that "good roads mean good public schools; good schools make good general education; good education makes good morals" and then proceeded to show that while there is a considerable investment in the aggregate, the cost to the individual acre is but little and is amply justified. He said:

You have the finest dirt roads in the world. What you need now is to macadamize them so you will have fine roads all the year around when the prices for farm products are high, as well as when they are low. I recently was assessed $4 an acre on my farm for a rock road that cost about $6,000 a mile. That's a fine road. A very good rock road can be built in your level country for as little as $2,400 a mile.

But take that $4 assessment for example. A man with a team can carry the yield of one good acre of corn to town over an average dirt road. On a good rock road he can carry with one team the yield of two acres. Figure for yourself what a man's time is worth, and how long it will take to pay for the rock road. That's how it profits you, even if you don't care to sell your farm. If you are interested in the market value of land take this from my own experience. Since the rock road was built by my farm I have been offered $25 an acre more for it than I thought it was worth before the rock road was built.

The trouble is that the cost of permanent roads is looked at in the aggregate and scares the half-hearted. To be confronted with an expenditure of millions of dollars is enough to make most any farmer hesitate. But when it is carried down to the real unit, the acre, the expense is small when compared with the returns which are almost inevitable and not long in coming. The people must be educated up to permanent roads, built at a cost of two to five thousand dollars a mile, before the era of permanent roads will dawn. They can be educated much more easily and satisfactorily by getting down to rock-bottom facts as to the cost and value to the acre, rather than to the state as a whole.

SOME RULES IN FAVOR OF THE WORK HORSE.

Farm work and city work are quite dissimilar from the standpoint of the work horse. Labor performed on paving is of necessity much more jarring on the feet and limbs of the horse than is the case when the labor is performed right out on natural soil. Barring this striking difference, however, work is work and we believe that the following rules which have been prepared by the Boston Work-Horse Parade Association will interest many of our boy and young men readers:

First, start at a walk, and let your horse work very easily for the first half hour.

Second, a heavy draft horse should never be driven faster than a walk, with or without a load.

Third, look to your harness. Avoid these faults especially: Bridle too long or too short. Blinders pressing on the eye or flapping. (An open bridle is best for most horses.) Throat-latch too tight. Collar too tight or too loose, or dirty on the inside. Shaft-girth too loose. Traces too long. Breeching too low down or too loose. Inside reins too long, in the case of pairs.

Fourth, do not let your horse drive himself; but handle the reins gently. Never jerk the reins; to do that is the sure mark of a bad driver.

Fifth, try to deliver your load with as little backing as possible. Backing a heavy load is apt to strain the hind legs.

Sixth, take the horse out of the shafts as much as possible; and if you drive a pair or four, unfasten the outside traces while the horses are standing; they will rest better that way.

Seventh, teach your horses to go into the collar gradually. When a load is to be started, speak to the horses and take a firm hold of the reins so that they will arch their necks, keep their legs under them, and step on their toes. A loose rein means sprawling and slipping, often with one horse ahead of the other.

Eighth, water your horse as often as possible. Water in moderate quantities will not hurt him, so long as he keeps moving.

Ninth, blanket your horse carefully when he stands, especially if he is at all hot. Repeated slight chills stiffen and age a horse before his time.

Tenth, bring your horse in cool and breathing easily. If he comes in hot, he will sweat in the stable, and the sudden stoppage of hard work is bad for his feet.

Eleventh, in hot weather or in drawing heavy loads, watch your horse's breathing. If he breathes hard, or short and quick, it is time to stop.

Twelfth, remember that the horse is the most nervous of all animals, and that little things annoy and irritate him. Remember that he will be contented or miserable accordingly as you treat him.

There is not a single principle here enunciated but what applies alike to the farm as well as to the city horse and the kind of care that would result when these suggestions are kept in mind would not only lengthen the life of the average work horse, but would aid immensely in keeping him in good flesh during his working years.

Special attention might be called to suggestion No. 10 because no more serious blunder can be made than by working a horse strenuously and heating him up just before putting him in the stable. The sensible driver tends to slacken the pace and let his horse gradually cool out, as it were, during the last half hour before putting him in the stable. It only means the carrying of this same sensible principle a little bit further when it is suggested that during the first half hour after meals a little care should be taken in order that the change from the work of digestion to the work of labor may not be made too suddenly.

RHUBARB CULTIVATION.

A subscriber from Albia, Iowa, asks the best time to plant rhubarb seeds and the proper care of the plants. While rhubarb may be grown from seeds, it is usually propagated by division of the roots, small pieces of which are separated from the old established roots and planted in rich, mellow soil. The roots may be planted from two to three feet apart. They cannot be cut the first year.

If grown from seed the seeds should be sown in a cold frame in March or April, protected from freezing and in two months the plants will be ready to set. Put them in rows twelve inches apart and give them good cultivation during the remainder of the season. The following spring they may be set out in permanent places. They should then be set in well prepared ground at a distance of four or five feet apart, after which the same treatment may be given as though they were set from pieces of roots. Ordinarily well cared for plants will live for a good many years. They should not be cut late in the season, as that interferes with early spring growth. An ounce of seed will sow a drill 125 feet long.

BEEF CATTLE CONDITIONS.

America at the present time faces a problem peculiar to itself. No other country in the world can offer a parallel because her situation, her remarkable growth, and her enviable location and marvelous natural resources cannot be duplicated. Agriculturally, we have been in the habit of looking toward the mother countries of Europe for analogies in solving the problems which confront us, and in most instances the solution sought has been found and could be satisfactorily applied. Our land and soil problems become simplified when the experience of years in foreign countries is practically applied on our farms. Some men call the farmer who practices a good system of crop rotation, and who applies fertilizers to depleted soils, a scientific man, which is true. Yet the farmer who is making the old farm yield more than formerly is not necessarily so much scientific as extremely practical.

Today, America faces a problem which has no analogy. No country in the world possesses the great range, the great crop raising facilities, and the energetic farmers in such vastness as are found here. Just now we are facing the problem of high cost of living which is common to the entire world where standard of living is on a high plane, and which is constantly going higher. That is the result of prosperity. In no commodity is the high cost so much noticed as in the cost of meat, which people are willing to pay well for if they can get it. During the past few years, however, our supply of meat animals has been materially reduced, and the one big question before the students of agriculture today is the meat problem. This is more especially true in the case of cattle because it takes time to replenish the cattle supply.

Agricultural papers have had much to say on the subject the past year, and are now alive with suggestions regarding the proper way to meet the shortage of beef cattle. The final solution seems to be to raise more upon the farm of the corn belt. Every large country in the world has certain sections that are peculiarly adapted to the rearing of beef animals, and in those sections such work is the means of gaining livelihood for the people. Those countries have been in the business long enough to become standardized. Experience has taught them what can most economically be produced in certain sections. America has not yet become standardized. A great many sections of the country are actually just in the making. Time will solve the problem as it always has solved problems, but a view of the transitions is interesting and may point a way to the future.

America became a great beef producing country because of cheap range land. Then the demand for breeding cattle on the range gave rise to call for beef bulls to which the British breeders catered by selecting animals of the beef type. In the show ring the strictly beef animal became the ideal for the Short-horn. The demand for good Short-horns in Argentina also tended to keep a lucrative market before the British breeders, so that the outcome of the whole thing has been that the market looks upon the Short-horn of extreme beef type as the ideal, and the milking qualities have been lost sight of.

During the range days the breeder of Short-horns in a small way had a steady market for bulls, but as in every business there are ups and downs, so in that of the Short-horn breeder. Growth of interest in dairying sections of the country made it difficult for the extreme beef type to be consistent with best returns from the cow. It was difficult for the farmer to get bulls of milking strain, because the best bulls on the market were not from good milking dams, and no milk records had been kept so that he could feel certain that the dams were good milkers. The introduction of general farming in the range country caused a breaking up of the exclusive cattle-raising business there. This cut off one avenue for the sale of bulls, and prices for the breeding stock fell.

Cutting up the ranges had another vital effect upon the cattle trade. It reduced the supply of feeding cattle for the corn-belt cattle feeder who had heretofore looked toward the range for his supply, because they could be more cheaply raised upon the range than upon the high-priced and producing land of the corn belt. It is hard for a man to turn from one line of effort to another. When the feeder supply was shortened, it remained for the feeder to buy cattle at a high price, or, in some instances, to raise grain and sell it, thus becoming a soil robber, where before he was a builder, and while dairying could be taken up it involved more help, which was scarce and very expensive.

The thought of raising their own feeders was forced upon them. This means the restocking of many farms that had fed cattle and a consequent demand for cattle that would be profitable on high-priced land. The same conditions that existed before the palmy range days again confront them. They must find some animal that will do well on high-priced land, not only producing milk, but return a carcass which will sell best on the market.

A TRIBUTE TO FARMING.

In the course of his recently published biography of Thomas Jefferson, Senator John Sharp Williams, of Mississippi, takes occasion to quote the tribute which Jefferson paid to farming as the noblest industrial pursuit in which man could engage, standing first in utility, and adds his own opinion that "it requires very much more brains and very much more information to be a really successful up-to-date farmer than it does to make an excellent lawyer, physician, senator or college professor, besides contributing more to human comfort and freedom."

The fact is now quite generally recognized that instead of being "only a farmer," the tiller of the soil is one of the most skilful specialists of the day; that instead of dedicating a boy to farming "because he isn't smart enough for anything else," farming is being chosen by the youth of the land because it offers the best opportunity for the display of versatility and intelligence along a dozen different lines. For, as Senator Williams points out, "it is one of the occupations that you cannot pursue to the highest point of success without possessing a sort of encyclopedic information, coupled with initiative and decision, for the problem is never the same for any two years." It was this thought which was in Thomas Jefferson's mind when he spoke of farming being a science of the very first order, counting "among its handmaids the most respectable sciences, such as chemistry, natural philosophy, mechanics, mathematics generally, natural history, botany."

If this were true in Jefferson's days, how much truer it is today, when farming has taken a breadth of vision and a wideness of scope hardly dreamed of in the days of the sage of Monticello. The fact is that farming today comprehends almost all the other sciences and arts and calls to its successful pursuits all the intellect and ingenuity which a man possesses. Its problems are constantly changing; its demands for brain constantly increasing; its rewards constantly enlarging.

SAVE THE BIRDS.

The prediction is made by a Missourian, one of those that recently addressed the Kansas City Historical Society, that song birds will become completely extinct unless measures are taken to re-establish their natural habitats. The prediction calls attention to the campaign which is being waged, not only in the grain belt, but throughout the country generally, to protect the birds which annually destroy millions of crop pests and are of incalculable benefit to the farmer. The federal department of agriculture has recently selected fifteen prominent men from all over the country who have agreed to donate their services in an advisory capacity to protect migratory birds, so that their number and usefulness may be enhanced. The plan of the government proposes the following steps in a nation-wide campaign:

Uniformity in protection of migratory game and insectivorous birds in the several states.

Protection of birds in spring while enroute to their nesting grounds and while mating.

Uniformity in protection of migratory birds at night.

Establishment of protected migration routes along three great rivers in the central United States.

Complete protection for five years for the smaller shore birds and other species which have become greatly reduced in numbers.

Reduction of the open season on migratory game birds, but in most cases not more than 25 to 50 per cent.

That the federal government, the states and the individual must cooperate if the birds of the nation are to be spared to carry on their good work as assistants to the farmer in the all-important task of destroying bugs and insects which are crop pests is now quite generally recognized. The Missouri speaker already referred to calls attention to the fact that the bird is simply following in the trail of extinction of the elk, the buffalo and various other animals which were once common in Missouri and elsewhere in the the grain belt. He says:

A hundred years ago wild turkeys were so plentiful in Missouri that only the white meat was eaten. Geese, brants and ducks lined every sandbar on the Missouri river from Kansas City to St. Louis sixty years ago, and thousands of pigeons flocked about the state. There was a large pigeon roosting ground near Excelsior Springs. Parrakeets, thrushes, indigo finches and ravens were once thick in this state. Mocking birds and other songsters were far more numerous than today.

The last record of an elk in Jackson or Clay county that I know of was one killed in 1806 on the present site of the union depot in this city. It was killed by members of the Lewis and Clark expedition. There is no evidence of buffalo in either of these counties since 1818. There have been few if any in the state within the last 100 years.

Bears disappeared from Jackson and Clay counties a century ago. Deer were plentiful about sixty years ago. In 1857 a porcupine was killed near Liberty. Its presence indicated that Missouri was once the habitat of this animal. Beavers have been scarce for a century. Two years ago a beaver family was discovered in Clay county. In accordance with the modern attitude toward animals these were rapidly exterminated and their pelts sold.

The farmers of America would be millions of dollars poorer if birds were to become extinct, to say nothing of the cheery friendliness of their companionship. It may not seem an important matter to the farmer, busy in the cornfield or the feed lot, but the value of the bird can hardly be computed. His loss would make itself felt far more seriously than most farmers realize.

The Sign of Mechanical Excellence the World Over

Des Moines Branch House of J. I. Case T. M. Co., Inc.

One of the most conspicuous structures in the Des Moines implement district is the Branch House of the J. I. Case T. M. Company, Inc., shown above—a large, modern structure built especially for the vast requirements of the company's business in the state of Iowa.

The building contains 36,800 square feet of floor space, affording every facility for the expeditious handling of the immense volume of business.

Service Station For Case Customers

The Des Moines branch house serves not only as salesroom and general state headquarters but as a Service Station, accessible at all times to owners of Case Machinery and Case Automobiles.

This pioneer among American machinery manufacturing concerns is this year celebrating its seventy-first birthday. The business was established at Racine, Wisconsin, in 1842 by Jerome I. Case, who in that year made his first threshing machine.

A conspicuous feature of the Des Moines branch house and in fact, of each of the sixty-five branch houses scattered throughout the important cities of the United States, Canada, South America and Europe is the CASE EAGLE, which stands as an everlasting pledge of the integrity of the Case Company.

The Des Moines branch house carries at all times a complete stock of the recent models of "Case" cars, gas and oil tractors, threshing machines and road machinery, as well as a full supply of all special parts.

It is the ambition of Mr. J. E. Gardner, Branch Manager, to render *real service*—the same efficient service to which users of Case machinery and automobiles are accustomed the world over.

J. I. CASE T. M. COMPANY, INC.
Des Moines Branch House
102-108 West Eighth Street (172)

Why Most Carriage Owners Want GOODYEAR Rubber Tires

AKRON, OHIO

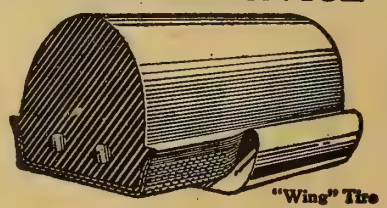
They Lead All Others in Sales Because They Lead All Others in SERVICE

After being in the field for 14 years, Goodyear Tires are now found on more carriages than any other make. Nearly four and a half million have already been sold. And three-fourths of all Carriage builders, knowing the public preference for Goodyears, have adopted these more durable tires. Nor do you find any other tire sold by so many dealers. If at the price of ordinary tires, you want something *more* than ordinary *service*, insist on one of these most popular tires:

"Eccentric" Cushion Tire

is especially designed for lighter vehicles—runabouts, etc. Note the wire hole is *below* the center. This increases the wearing depth of the tire one-half, and saves you that much money. This tire stays firm in the channel. The high-grade, springy rubber used in the "Eccentric" makes it remarkably easy-riding. Always gives satisfaction.

"Eccentric" Tire



"Wing" Tire

Our "Wing" Tire

Note this patented "wing"—how it presses against the channel, thus preventing mud, grit and water from getting in and quickly destroying the tire base. This tire remains sound. It won't creep or get loose. Gives utmost wear. Will greatly lengthen life of your carriage. Of tough, springy rubber—exceptionally easy-riding. Send us your name on a postal today for our latest Carriage Tire Circular. (1261)

THE GOODYEAR TIRE & RUBBER COMPANY, AKRON, OHIO
Branches and Agencies in 103 Principal Cities

Build Your Crib High!

And, at the same time, put in an old reliable Schroeder Upright Driveway Elevator. Save time, save trouble, save expense, and get more for your grain by holding out for highest prices. With a Schroeder Elevator built right into your crib one man handles all the work easily in any position.

It's wider than any elevator made and will carry more grain. It's built right, down to the very bolts. And you can use it anywhere in very short order.

Get an Old Reliable **SCHROEDER** Upright Driveway Elevator

It is the first grain elevator ever made and has never been approached by imitators. It leads the field in every way—in make, in capacity, in sales. For engine or horsepower.

Up-to-date crib plans with detailed drawings, specified bill of lumber with estimated cost, mailed to you free. ASK US FOR THEM NOW

FREE BOOK on request. Tells all you want to know about Grain Dumps and Elevators. Get a copy today.

H. V. SCHROEDER MFG. CO. 150 Third Ave., Minier, Ill.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

When it comes to perfumery, a corn field just coming out in tassel and silk has the drug store kind beaten a mile.

I do not like to leave the potatoes in the soil a very great while after they have ripened. A soaking rain is apt to start sprouts, and a potato that has sprouted in the soil before digging is always watery.

The fruit crop of the future is going to pay better than it has paid in the past, but because of worms and insects of various kinds it will take work and knowledge of what to do to raise the best crops. Many orchards are dying out without the owners planting new stock.

Again it will be a good idea to buy twine needed for the corn harvest early. Last fall there was a shortage, and it looks as if there would be this fall. The country now uses a lot of twine to tie up the corn crop. Better buy what you have to have when you can get it.

Better take a look at that empty stave silo. Warm winds and sun shrink it fast, and hoops should be kept tight so it will stand through a hard wind. Mark before you tighten, then let back to that mark when commencing to fill. This will prevent bursted hoops and warped staves when filling.

A pig seldom outgrows the hole he has been used to using in the fence, although he may be doing better than any pig you ever raised before. Pigs usually do well when they have liberty, but they soon commence taking too much liberty, particularly if a neighbor's corn field is close.

This is the age of larger machinery. I can remember when the four-foot cut mower was standard. When the cutter bar was lengthened to four feet and a half folks said that was six inches too much. Now the six foot is common and seven and eight footers are quite plentiful.

Cutting suckers in the corn field was once a job for the barefoot boy. Nowadays, if corn suckers the suckers are allowed to remain. Sometimes, if rain is plentiful, the suckers bear ears the same as the original stalk, but if not they make that much more fodder. In the days before the corn binder how we did hate to cut suckered corn with the knife.

County fair premium lists are circulating through the mails. As a rule, county fairs are not as popular as years ago. They pay too much attention to horse racing and cheap shows of the "vawdvill" order, so many say, to deserve patronage. The scramble for the prize pumpkin and the best colt is no more.

The fat horse on a hot day, in the hands of a driver who doesn't care is a risky combination. Many horses are ruined or partly so by carelessness in excessively hot weather. I notice more horses are "winded" in hot weather when laying by corn now that most drivers ride instead of walk.

The season for best use of the disk plow is approaching. When the soil is dry and hard, as most stubble fields are during August and September, no plow pulls easier than the disk. It is a hard, dry land plow. The only fault I can find with it is the furrow bottom it leaves for the horse to walk in. Being saucer-shaped, it is tough walking for the furrow horse.

The scent of new-mown hay may be a fine thing for our city brothers to dream about, but if they wish to go up against the real thing let them come out and help haul on a windy day or spread hay in the barn some day when the thermometer shows ninety-five in the shade.

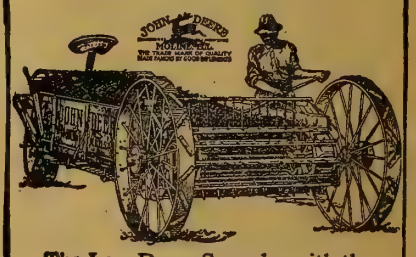
The number of cows to be fed should determine the diameter of the silo to be built, because a certain depth must be taken from the top each day to prevent the silage from spoiling. A ten-foot silo will do quite well for ten cows, a twelve-foot silo will furnish feed for fifteen and a sixteen-foot silo for twenty or over. If a larger silo is needed it is usually better to build two in order to be sure to have fresh, sweet feed.

One acre well tilled will produce more than two acres half tilled. This should be borne in mind by those who are thinking of cutting down the size of their pasture in order to have more acres under plow. Give the pasture a light "dressing" of manure and see what it can do, and let the other fellow experiment with stall-fed cattle. Perhaps it isn't what it is cracked up to be.

Little pigs that have free range will grow like weeds, but they will be quite likely to get into mischief. If they can be kept from straying off to the neighbors it may be better to overlook a few things rather than to shut them up in a small yard.

John Deere Spreader

The Spreader with the Beater on the Axle



The Low Down Spreader with the Big Drive Wheels

Here's your chance to get a low down spreader in which the advantage of big drive wheels has not been sacrificed for the low down feature.

The John Deere Spreader has revolutionized the spreader business. It is as much an improvement over the ordinary manure spreader as the modern binder was over the old-style reaper. Some of its good points are:

The Beater

And all its driving parts are mounted on the rear axle. Power to drive it is taken from the rear axle through simple gears like those that have been used on horse-powers for many years. This construction is patented. You cannot get it on any other spreader.

Only Hip-High

Easy to load. The top of the box is only as high as your hips. Each forkful of manure is placed just where it is needed. You can always see into the spreader.

Few Parts

Clutches, chains and adjustments; in fact, some two hundred parts in all, are entirely done away with. To throw the machine into operation, move the lever at the driver's right back until the finger engages a large stop at the rear of the machine.

Roller Bearings

Together with the simplicity of the machine itself, make the John Deere Spreader light draft. There are many more reasons that have helped to make the demand for John Deere Spreaders greater than all those interested in the spreader business thought possible. These features are fully discussed in our spreader book.

Easy to Load

Only Hip-High

Get This Book Free

It tells how John Deere Spreaders are made and why they are made that way. It contains illustrations and descriptions of working parts and colored pictures of the John Deere Spreader in the field. It also has valuable information regarding the storing and handling and applying of manure to the land. Get one of these books free by asking us for our spreader book, Y27

Moline, Illinois

CURRENT EVENTS

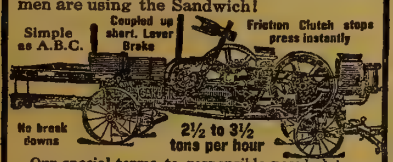
THE republican assault on the democratic tariff revision bill was opened in the senate by Senator McCumber, of North Dakota, whose speech opposing Canadian reciprocity was one of the best and strongest delivered in congress against that one-sided pact. Senator McCumber attacked the Underwood tariff bill because of its discrimination against the farmer, charging the democrats with "diliberately kicking the American farmer into the gutter." He pointed out the large number of farm products put on the free list and asserted that if the country were to cut down on its luxuries it would not be necessary to thus remove protection from the farmer on its necessities. He carried on this imaginary conversation with the farmer with telling effect: "You are reaching a point where your income is unable to keep pace with your extravagances and you are asking the farmer to make good the deficit by reducing the price of his products. It never occurs to you that the proper place to begin economy is on the luxuries and the unnecessaries of life. You declare to him that the American people are paying $1,500,000,000 for meat and you say this is too much. He answers, 'They are also paying $2,000,000,000 for liquors. Cut your bill half and you will save enough to buy all your meats.' You declare they are paying $435,000,000 for flour. He replies, 'They are paying $800,000,000 for tobacco. Cut your tobacco bill half and your flour is free.' You declare they are paying $225,000,000 for potatoes. He replies, 'They are paying $500,000,000 for theaters and amusements. Cut your amusements half and your potatoes are free.' You declare they are paying $300,000,000 a year for butter and eggs. He replies, 'They are spending $500,000,000 a year for confectionery.' His replies are unanswerable." Senator McCumber will be followed by numerous other republicans, although it is almost a foregone conclusion that the democrats can put their tariff plan through, regardless of the verbal assaults in the senate, having two votes to the good in the final test.

HAVING made a good start at the difficult task of heading the presidental cabinet, secretary of state, Bryan, is now being attacked in congress and elsewhere for his action in quitting Washington for a five-weeks Chautauqua lecturing tour. Incensed by the attacks, Secretary Bryan has issued a statement in which he declares that his salary of $12,000 a year is not sufficient to meet his needs and that he proposes to add to his income by his lectures, adding that during the past seventeen years he has delivered a vast number of addresses without receiving a cent compensation and even paying his own expenses, despite which he has been in the habit, recently, of saving $10,000 a year from his earnings. By taking the government position and withdrawing from private life for four years he would, therefore, stand to lose $40,000 unless he added now and then to his income by returning to the lecture platform. The whole affair seems to us to be much ado about nothing that the public has any business with. Secretary Bryan is an able and popular speaker, the public cannot hear him too often. His talks are invariably on a high, moral and dignified plane. If he chooses to take part of his vacation time to lecturing for pay, instead of going to the mountain or seashore and spending money, it is little or none of the public business. While the salary of $12,000 a year seems a large one, it must be remembered that the duties of the high office necessitate large expenditure. For instance, Mr. Bryan pays $4,000 a year house rent. Then he must entertain all the foreign ministers and representatives, in addition to notable Americans. In fact, it is almost a continuous performance of entertainments, all of which costs money. It is far better for the secretary of state to deliver paid Chautauqua addresses and be above suspicion than to receive financial aid from outside sources which are questionable or for the office to be possible to a rich man only.

BULGARIA is paying the penalty of selfish aggression. The Balkan allies, which united against the common enemy, the Turk, have now split and Servia and Greece, strengthened by Roumania, have allied themselves with the Turk against the common enemy, the Bulgar. The latter brought all his new troubles on himself by demanding the lion's share of the conquered Turkish territory in a most presumptious manner, refusing to admit that Greece, Montenegro or Servia deserved any credit for the allies' victories. While it was true that Bulgaria had many more men in the field than any of the other allies, it did not win all the victories unaided, nor did it, alone and unassisted, bring Turkey to its knees. Accordingly, the whole matter should have been referred to Russia for arbitration, as the allies agreed before they became drunk with love of territory. No sooner had the allies fallen out than the Turk saw his opportunity and started to march back over the territory he had lost, joining hands with Greece and Servia against Bulgaria. Roumania had taken no part in the campaign against Turkey, but saw a chance to grab a slice of land, and joined against Bulgaria. The result is another war in the Balkans which promises to be as bitter and as bloody as the one just ended. When this second war is over there is no assurance that the victors will not fall out again, with an endless chain of alliances and campaigns which promises to pit one nation against another for many years to come. In the meantime the crops are suffering, the people are becoming impoverished with debts and thousands upon thousands of lives are being sacrificed in the mad desire for more territory over which some monarch will have tyrannical sway.

SANDWICH
(solid steel—money maker)
Motor Press

Puts you—or your boys—in the big paying, fast growing business of baling hay! "Net profit $18 to $22 per day," write Swartz & Mensch, Dixon, Ill. Other hustlers making $200 to $300 net profits monthly. And these men are using the Sandwich!



Our special terms to responsible people let you start with little money. And you pay from your profits. Unless we **know** the Sandwich will make you stacks of ready cash, we could not sell this way.

Gas Engine on Same Truck

Here's the most complete hay baling outfit in existence. Full power is driven from engine to press by heavy steel roller chain. It does away with slipping belts. The Gas Engine is the best quality—hopper cooled type—gear driven magneto—4, 6, 8, and 10-horse power.

The Sandwich has a simple time-tried self feeder and a big feed opening. A great windrow baler. Beats every ordinary press from 2 to 8 tons daily. 25 tons are an everyday job for the Sandwich; often 30 to 40.

YOU CAN DO IT WITH A REO

Do Your Hauling By Daylight

Many a farmer knows the discomfort of rising hours before dawn in order to reach the market in the nearest city miles away, in time to sell his produce.

With a Reo Motor Truck, you can start later, and still reach town as early as you wish—ahead of all the others, if you want to beat the crowd.

And then back to the farm in a hurry,—with a full load if you wish. No tired horses; no lost time, and you can get more money for your produce when it arrives in perfect condition.

Many farmers take two and three loads a day to town, with a Reo Truck where they formerly were able to haul but one. The Reo will pay for itself in a very short time.

Reo Model H costs but $750, if you buy it. If you don't buy it, it is costing you money every day that you keep on hauling with horses.

Write us today for some real, solid, money-saving information about Reo Motor Trucks, and how they will help you.

REO MOTOR TRUCK COMPANY,
1906 South Washington Ave. Lansing, Michigan.

Save Your Seed Corn

You can put your seed corn in prime condition and keep it that way through the winter, until planting time, with

THE WHITWORTH CORN DRIER

It's one of the most useful devices for the corn grower ever invented. Dries every kernel thoroughly; no moulding. Will hold 600 ears, each one separately and rigidly in its place. You see them all at a glance. Rack is 6 feet high, 6 feet wide. Frame of heavy steel bars; pins heavy galvanized steel wire.

Price only $6.75 We have a special Combination Offer that will interest you. Write us about it.

CHAMPION MFG. COMPANY, P. O. Box 4358, Cedar Rapids, Iowa

The Insecticide Law

requires the plain printing, on each package, of the amount of inert material used, or the material which the Government considers of no value for insecticidal use. Every purchaser of an insecticide should consider this point and should see that the insecticide guaranty is given by the manufacturer on every package.

LEE'S LICE KILLER contains only 3 per cent inert matter (water). Others contain from 10% to 80% inert matter. Used for poultry and hogs. $1.00 per gallon. No dusting, dipping or greasing.

LEE'S DIP contains less than 10 per cent inert matter (water). Others, from 10% to 30%. Used for killing lice, etc., on horses, cattle, hogs, sheep, dogs, etc., also as a disinfectant. $1.00 per gallon.

LEE'S INSECT DESTROYER (powder) contains less than 10 per cent inert matter (Fullers Earth, used to prevent caking). Others, from 25% to 90%. Used for chickens, pet stock, vegetables, etc. 1¼ lb. package for 25c. 3 lb. package 50c.

LEE'S FLYO-CURO contains NO INERT MATTER. Others, 10% to 75%. Used to keep flies and mosquitoes from horses and cows. $1.00 per gallon. A little goes a long way.

This is one reason why the **Lee Line** is outselling all others and especially accounts for the great increase in sales since the Insecticide Act went into effect. We give greater value to the consumer, better formulae, always strictly maintained, less inert matter; in most cases a bigger package for the money.

The **Lee Line** of Foods, Insecticides and Remedies is sold by more than 10,000 dealers in the United States and in many foreign countries. If not at your town, send for latest poultry book and name of nearest agent.

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

CHOLERA.

Would like to know what is the matter with my pigs. They are about four months old. They have good clover pasture and some corn. They seem all right up within two or three days before they die. I killed two that were ailing. In the first one there wasn't a worm, but the lungs had dark red spots on them. I guess about half of the lungs had turned that way and liver had white spots on it; the kidneys when cut open looked yellow. The second one I killed the lungs were about the same as the first and also the liver, but the kidneys looked all right. They seemed to have a cough, but not bad. Can you tell me what to do for them and what is the matter?

The symptoms suggest hog cholera and you should have a veterinarian make a post mortem examination and immunize the remaining hogs with serum, if he finds cholera present.

SWEENEY.

I have sweenied a horse and have put a hole at the bottom and pumped it full of wind. Have I done the right thing? Will the air come out alone, and how long will it stay under the hide? Is there anything else to be done with this, and about how long will it be before a horse can be used in a case like this?

The treatment is unnecessary and cruel. It is apt to cause blood poisoning. Better press out the air as soon as possible. Hand rub the wasted parts three times a day and at night rub with liniment. In bad cases it is necessary to blister the wasted muscles several times to encourage flow of blood and growth of muscles.

FISTULA.

A bunch of fistula came on top of a horse's shoulder and broke. I know this is fistula and would like to have a cure for same published.

It will be necessary to lay open each pipe and pocket to insure perfect drainage, then swab with tincture of iodine twice a week and once daily pack the cavities full of oakum saturated in a mixture of equal parts of turpentine and raw linseed oil. A qualified veterinarian would also give hypodermic injections of polyvalent of autogenic bacterin.

TUMOR.

I have a cow that has a lump in each of her hind teats. These lumps are about the size of small marbles and move up and down when we milk. The cow is in good health and gives as much milk as usual.

Nothing short of an operation will remove the lumps and as they do not affect the milk flow they should be left alone at present.

MATURE vs. IMMATURE SOWS.

To the Editor of The Homestead:

It is an error, quite frequently made, to dispose of the mature sows because they are heavier and will bring more in the market than the young ones, and to keep the immature females to breed from. There are several reasons why the young sows do not do as well and are not as profitable as the mature sows.

In the first place, the young sow is immature, is growing and is not developed in bodily form, and consequently when called on to produce a litter of pigs during that period she is doing double duty—growing toward mature size and carrying and feeding the young all at the same time. For the reason that she is doing double duty, she has not the large supply of blood and nourishment to feed the young pigs before birth that the mature sow has, and the pigs are smaller at time of birth. She is not likely to farrow as many pigs at the first litter as she will in later years. The pigs from the young sows do not grow as large as those from the older ones, and there is a tendency to reduce the size of the animals raised from them.

During a great boom with any one breed, where there is a demand for all the females, both young and old, for breeding purposes, there is a noticeable diminishing in size of the animals, especially from the young ones, and the breed deteriorates in the general quality of the animals. The inferior ones as well as the good ones are bred from, which is disastrous to the general standing of the breed.

In breeding, the best is none too good. The mature sow that has proved her ability to bring large litters of pigs, in which there is a large percentage of good ones, is a valuable animal to keep. Fecundity is a desirable characteristic, as one does not need to be at the expense of feeding as many sows to keep up the supply of pigs as when they have small litters. The mature sow has a large amount of blood and nourishes the pigs well while carrying them. The pigs are large and strong at time of birth, often reaching double the size and weight of those from the young sow.

After pigs are farrowed, the mature sow is capable of giving a good supply of milk that will start the pigs growing rapidly. When they have had their stomachs well expanded, it is not a difficult matter to keep them growing. If the pigs are kept growing along rapidly a given amount of gain in weight can be more cheaply produced than if grown slowly. A certain amount of feed is required to sustain life, and therefore the most rapid gain is the most economical.

There seems to be an impression that sows will cease breeding after they are three or four years old. That is a mistaken idea. There are cases on record where sows have bred until twenty-five and thirty years of age. If a sow skips one season in breeding, she should not be condemned. Cows do the same occasionally and we think but little of it. There may be good reasons for such occurrences.

It will be well to consider some of the facts in connection with the subject before feeding the old sows off and keeping the young, immature ones for breeders. It is ultimate profits to be looked for, and as the old sows breed larger litters of pigs of better size and capable of growing more rapidly than those from the young ones, they are more profitable to keep.

W. H. Underwood.

The "lobby probe" at our capital is the cause of some mighty interesting reading and as usual is starting the cry of "muckraking" on the part of those who happen to be touched by the rake. Muckraking is, no doubt, dirty work, but it may be as necessary as cleaning stables. The only queer part of it is that there should be so much muck to rake where only honor and honesty should be found.

If in doubt what to do with the old roosters just "kill 'em an' eat 'em." They are only a nuisance about the yard after this.

"Capewell" HORSE NAILS

ARE you personally interested in the shoeing of your horses? You can't afford to neglect the matter. Feeding and grooming are not the only requirements in horse care.

If—from using cheap, inferior nails, or other causes--horses' feet are not fit for travel the animals become a failure for transportation uses.

Personally interested owners have "Capewell" nails used. They find them safe, reliable, economical. Not cheapest regardless of quality but **the best nail at a fair price.** All shoers can afford them. Most high-class workmen do use them.

Unequaled for farm service. Are **"Capewell"** nails used on your horses? You will know "The Capewell" by the check mark on the head—our trade-mark.

3 to 5 Cents Per Bushel More—

—That's what a stand of "Turkey Hard" wheat from my selected seed will mean to you. (Look at the market reports.)

—Ask any grain man why "Turkey Hard" outsells all other hard winter varieties.

—He'll tell you why, quick. He'll tell you that "Turkey Hard" has the high percentage of gluten that millers and bakers want—that they will pay more for the wheat that has more of it, because it *makes more bread.*

—The extra they pay is the extra *you* get—that is, it is if your wheat is "Turkey Hard". And it will be—every gluten-filled, flinty kernel of it—if you plant my standard

Turkey Hard Seed Wheat

—I want you to put in "Turkey Hard" this fall. You'll be as enthusiastic about it as our Kansas farmers are, once you've raised a crop of it, and pocketed the extra price it brings.

—I'll ship you the right seed—no seconds, no thirds, no dirt, no shrivelled stuff—but real, genuine "Turkey Hard" seed; seed that I subject to the strictest of tests for purity and germination; seed that will produce wheat of marvelous vitality—wheat that will live and grow and yield big in spite of the dry weather conditions that ruin other varieties—Turkey Hard seed, the pick of the Kansas acreage—that's what I'll send you.

—Write me today about this matter. Just say, "McCullough, send me your special Turkey Hard Seed Wheat Proposition with samples."

—I'll do it at once, so you can place your order for your next year's seed before I'm all sold out of "Turkey Hard".

McCULLOUGH

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer, who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

POSSESSION UNDER LEASE.

Mr. J. P. Anderson, Anamosa, Iowa.—About twelve years ago I bought my farm of sixty-seven acres, more or less, and paid cash therefor. I got a warranty deed and abstract of title. Afterwards I learned that a strip occupied by a lane and a slaughter house yard was on my land. The party claiming the strip has no deed to it, and no deed to it was ever made by any former owner, but the party claiming the strip claims to hold by an old lease of it, made twenty-five years ago. The then owner of the farm sold it, giving a warranty deed and making no reservation of said strip and the farm has passed through several hands since then. Can I recover possession of said strip by law?

Answer.—Unless the lease mentioned is valid and still in force you can recover possession of the strip by law. It is not at all likely that a lease made twenty-five years ago is still in force. It probably was made for a short time and expired many years ago. Possession of the strip for twenty-five years by parties claiming under a lease would not give them title by adverse possession, and they would have only such rights as the lease actually gave them.

TIMBER LAND—FENCES—WILLS.

A Subscriber, Glenwood, Iowa.—(1) A owns a tract of land a quarter of a mile from the public road which he uses for timber only. B owns land on three sides of it, which he uses for farming and pasture. C owns land on the fourth side of A's land, which he uses for timber only. A has to drive along the fence on B's land to reach his land, and has been doing so for twenty-five years. Can B prevent him from doing so? (2) Can B compel A to construct a hog-tight fence on the three sides of A's timber land? (3) Last summer B took down his wire fence in one place so his stock could get in A's timber for pasture and A drove the stock back and nailed up the wires. Can A recover damages from B? (4) A farmer died several years ago, leaving a will by which he gave his wife all his personal property and a life interest in his real property, the real property at her death to go to their son, the farmer having no other heirs. The will was set aside and the widow took the personal property, and the real property was divided equally between the widow and the son. The widow has several brothers and sisters. Can she will all her property to them, leaving none of it to her son? (5) What is the usual fee of attorneys for breaking a will?

Answer.—(1) B can prevent A from driving over his land. The proper course for A is to buy or condemn a right of way over B's land for a private road. (2) He cannot. The owner of timber land used only for the timber thereon is not required by law to fence it. (3) A cannot recover damages from B. (4) The widow can will all her property to her brothers and sisters and disinherit her son, and such will cannot be set aside for that reason. (5) There is no usual or uniform fee. It would depend upon the circumstances of the case, the amount of property involved, etc.

LIEN FOR STALLION SERVICE CHARGES.

A Subscriber, Dow City, Iowa.—(1) A bought from B a mare with foal and nothing was said at the time about who should pay for the colt. C, who is the owner of the stallion, wants A to pay for the colt. Can C recover the service fee of the stallion from A? (2) Is a service fee lien good after the mare has changed hands when no agreement has been made about it before the change was made?

Answer.—If C complied with the law about advertising his stallion for public service he has a lien on the colt foaled by the mare for six months after the birth of the colt, and within that time he may place in the hands of a constable an affidavit containing a description of the stallion and of the mare, and the time and place of service, and then the constable must take possession of the colt and sell it at public sale giving ten days' notice, and out of the proceeds pay costs and the service fee, returning balance to owner. (2) A service fee lien is good after the mare changes hands, though no agreement is made by the parties.

LANDS AND HOMES

CHOICE FARM AT PUBLIC SALE!
1,000 ACRES OF FARMING LAND FIVE MILES FROM MT. VERNON, Davison County, South Dakota.
THURSDAY, AUGUST 7, 1913, AT 2 O'CLOCK, AT THE FARM

This choice farm consisting of six quarter sections (NW¼ of Sec. 7-102-61, the NE¼ of 1, SE¼ of 1, NE¼ of 12, SE¼ of 12 and the SW¼ of 12-102-62), will be sold to the highest bidder in tracts of not less than one quarter section. The land is all in a body without one foot of waste land. $2,500 has been spent for tiling and the land is in good shape for cultivation. It was purchased by the present owner some ten years ago for a stock and grain farm and for a number of years up to 300 head of cattle were fattened annually. Every acre will grow corn or alfalfa. Seventy-five acres of well-set alfalfa at the present from which the second crop was cut July 10th. Over 800 acres of this land now under plow. On rural free delivery line and local and long distance telephone in the house.

The improvement consists of a modern six-room house, furnace heat, running water, large basement and cistern, large barn in only fair condition, splendid granary of 8,000 to 9,000 bushels capacity with wagon dump, elevator and eight horse power gas engine. Under this is basement shop or storeroom. There is a large chicken house, sheds for cattle, hogs, etc. These buildings are situated in a good grove and the feed lots are well protected. The farm has seven to eight miles of fence mostly three and four wire except the alfalfa hog pastures and large garden which have woven wire.

TERMS: 10% of purchase price on date of sale, 10% more on November 1, 1913; 20% or more March 1, 1914; 60% may be left in the form of mortgages dated March 1st, to run for a term of years at 6% with the privilege of paying any or all of it any interest paying date.

Homeseekers' Excursion rate on the C. M. & S. P. R. R., August 5th. Land can be inspected at any time. For complete information write
CAREY M. JONES, & CO, Auctioneers, Chicago, Illinois
G. W. DOWNS, Owner, Mt. Vernon, South Dakota.

FOR SALE BY OWNER
Red River Valley Farm

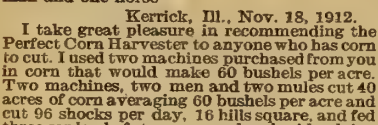
The PERFECT CORN HARVESTER

SOLD DIRECTLY TO FARMERS

$18.00--Freight Prepaid



The correctly adjusted machine to **cut for shock or silo.**

Works in all kinds of corn and on all kinds of soil.

No breaking off of ears or pulling of stalks. Absolutely safe.

Cut from five to ten acres a day with one man and one horse

Kerrick, Ill., Nov. 18, 1912.

I take great pleasure in recommending the Perfect Corn Harvester to anyone who has corn to cut. I used two machines purchased from you in corn that would make 60 bushels per acre. Two machines, two men and two mules cut 40 acres of corn averaging 60 bushels per acre and cut 96 shocks per day. 16 hills square, and fed three car load of steers every day, besides doing other chores, and were all through with their day's work by six o'clock every night. I would be glad to have you refer anyone to me for any further information. Very truly, L. H. Kerrick.

Send today for booklet on "Cutting Shock or Silo Corn."

LOVE MANUFACTURING COMPANY, Dept. 15, Lincoln, Ill.

ALFALFA **$7.50 Per bu.**

Best Non-Irrigated Seed---99.6% Pure

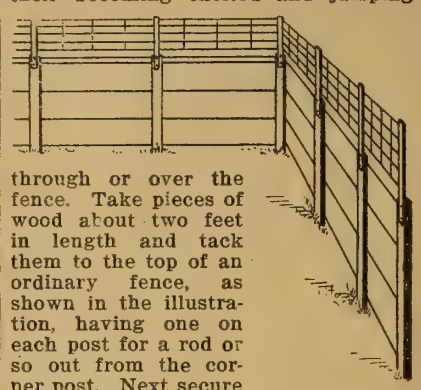
95% germination $9.75. Absolutely guaranteed. Northern grown, extremely hardy. No seed better. Have Turkestan alfalfa, grass seeds all kinds. Ask for our Latest 60 p. Book on growing alfalfa, Catalog and Samples. **All Sent Free.** We can save you money. Write today.
A. A. BERRY SEED CO., Box 403 CLARINDA, IOWA

HINTS·SUGGESTIONS·DEVICES

WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

TO CORNER A FRACTIOUS ANIMAL

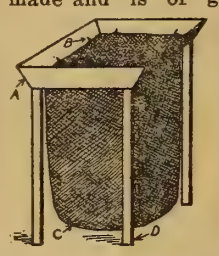
The following illustrated device will be found very convenient and effective on the average farm. While we, of course, like to (and do) keep on intimate terms with most of the farm animals, there are times when all of us have wished that we had a corner in the lot where we could hem some of the stock up and crowd right up and catch them without any danger of their becoming excited and jumping



through or over the fence. Take pieces of wood about two feet in length and tack them to the top of an ordinary fence, as shown in the illustration, having one on each post for a rod or so out from the corner post. Next secure a piece of ordinary woven wire from eighteen to twenty-four inches high, and tack it to these pieces above the posts. When crowded into such a corner, an animal is pretty apt to quiet right down and allow one to capture it, where, if it were an ordinary fence, it might attempt to go through or over it, perhaps greatly damaging or fatally injuring itself; so that the plan is not only one of convenience and a saving of labor, but guards against the injury of stock and tends to keep them more gentle and tractable.

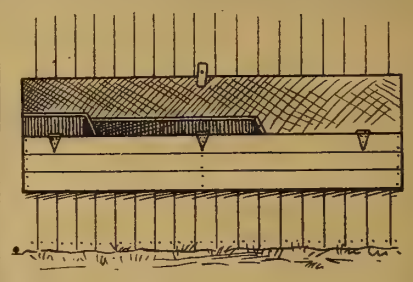
Sack Holder.

A handy sack holder can easily be made and is of great convenience, especially where one man must work alone. The accompanying illustration shows one which will give very satisfactory results. To make the hopper, A, take four boards eight inches wide and saw them slantingly in such a way that the top will be thirteen inches wide and bottom seven inches wide. The legs, D, are made of one by two's, or two by two's. B represents nails driven through the hopper leaving the points exposed to hold sack, and C is the sack.



Preventing Stallion Accidents.

The accompanying cut shows how accidents may be avoided with the stallion when his regular keeper is absent or sick, or for any reason unable to attend to him at feed time. Most stallions do not care to have strangers around them, and in case it becomes necessary for the boys or some of the women folks to feed the



stallion, he is very apt to crowd out of his box stall and get away, perhaps injuring the person who had to open the door to feed him. Not only can the stallion's grain and roughage be fed through this opening without entering the stall, or even tossing feed in through the open door, but water can be carried and set in the manger for him, thus avoiding all danger whatsoever in caring for the animal. Care should be taken, however, in reaching the hand too far into the opening, as a playful nip of the stallion's powerful teeth is apt to snip off a finger or painfully lacerate an arm.

Convenient Hay Frame Stand.

Set four posts in ground so that their tops are the same height as the rear wheels of the wagon, placing the pairs of posts eight or nine feet apart and the posts in the pairs about four feet and six inches apart. Securely fasten a strong four by four over tops of posts that are four feet and six inches apart, and on top and in the center of this nail a two by four twelve inches long, boring a one-half inch auger hole through both pieces. Then take a three by four or four by four, four feet long also having a one-half inch auger hole in center and drop a half-inch bolt through these two pieces, as shown in illustration, leaving it loose enough so that the top piece will turn freely on the lower piece. Take off the back of frame first and the turning pieces will produce the same results as the front wagon bolster. By placing the stand along fence as shown it saves two posts and makes it more solid.

Large Kettle Stand.

There should be a stand to support the large kettle, as the old method of hanging it every time it is used takes too much valuable time and is too difficult. The legs should be securely welded and riveted to the band so there will be no danger of them coming off when the kettle is full. Only three legs should be used in order to make the kettle set level.

The rapid growth of the corn during the hot, moist period of the last two weeks has been remarkable. Even the late planted and unpromising fields now show up well, and the prospects for a full crop are as good as they were last year at this time.

TIRES AND TUBES AT CUT PRICES

We are offering now to motor owners all over the United States standard make tires at the lowest prices ever heard of. These are not a lot of old nameless tires. Every one is a well-known make, such as Fisk, Diamond, Goodyear, Empire, etc. Take your choice. This partial list gives you some idea of the reductions:

30x3	$10.10
30x3½	14.20
32x3½	14.90
33x4	21.00
34x4	22.00
36x4½	29.00

Save $50 to $300

Yes sir, you can positively save that much *or more* by buying your gasoline engines *direct from the manufacturer.* I am out to triple my gasoline engine business and I'm going to do it because I am making three engines where I formerly made one and I'm making prices that are selling them like wild-fire. Before I started manufacturing gasoline engines and selling them direct to you farmers, dealers used to get $225 to $300 for 5 H. P. Engines that were far inferior in quality to the famous 5 H. P. Model which I put on the market at the unheard of price of only $119.50.

Now I Am Making a Still Bigger Cut Just notice my *new* prices, only $99.50 for my famous 5 H. P. engine and other sizes in proportion. Here's your chance to get an engine this year at a price never before equalled—an offer made possible by my increased production. Act *quick*—these prices are *good for 60 days only.* Write me today for my big engine catalog and special 1913 offer that will help you get your engine partly or entirely without cost to you in the end. Don't wait. Don't put it off. Write to Galloway today.

GALLOWAY GASOLINE ENGINES

I can ship you any size from 1¾ H. P. to 15 H. P. either stationary or mounted on hand or horse portable trucks or equipped with wood-sawing outfit. Over 30,000 in actual use today in all sections of the country and 31 foreign countries, and all sold on a positive 30 day Free Trial Privilege backed by a $25,000 legal bond and a 5 year warranty on materials.

Free Service Department: My corps of engine experts will tell you how to install and use your engine and equipment to the best possible advantage. This service is free to users of Galloway engines.

My Big Engine Catalog tells all about the complete Galloway line —my big Pumping Engine Catalog shows my unequalled line of pumping engines and several special outfits. Write today for catalog desired and new, special 1913 offer. Do it before you lay this paper down. Just address:

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

BUYING AND SELLING DAIRY COWS.

To the Editor of The Homestead:

In the improvement and maintenance of a profitable dairy herd it is necessary to both buy and sell cows. The buying is, of course, for the purpose of bringing better animals into the herd, and the selling for the purpose of getting rid of the poorest. One must buy at a high price and sell at a low price and this is such a hard thing for a tight-fisted man to do that many farm herds are not improved at all.

The dairyman who owns a cow too poor to be kept in the herd should have the honesty not to sell that cow to another man who is trying to improve his herd. She should in all cases go to the butcher. One can improve his herd very rapidly by annually buying one good cow of large milk-producing capacity and at the same time disposing of his poorest cow. It is not necessary to increase the number of cows in the herd to increase the aggregate amount of milk produced. There are men in the milk-producing business who are trying to increase their milk supply by increasing their number of cheap cows. Never yet has a man made money by doing that. Usually that course leads to discontinuance of business.

Though one may have to search far for the kind of cow he wants, it will pay him well to do so, and especially is this true if he intends to retain her for a breeder. Every cow that is purchased for use in the herd should be bought with the idea of using her for a breeder as well as a milk producer.

There are two general places in which cows can be purchased—namely, on the farms and in the city stockyards. The farms have the advantage in that something may be known of the value of the cows thus purchased. A cow found in the stockyards is under suspicion of having reacted to the tuberculin test, though the suspicion may be without foundation. But it is best to be on the safe side and those really interested in the improving of their herds will do well to go out and hunt for the particular kind of cows they want.

Still, it should be borne in mind that tuberculosis is present in many rural localities, and some of the affected herds are losing individual cows from this disease, the owners keeping that fact a secret as much as possible. But in buying cows on the farm the chances of obtaining animals affected with tuberculosis are not nearly so great as in getting them at the stockyards, for it is a practice with many to send their cows to market as soon as there are indications of the presence of this disease. In buying cows, either on the farm or at the stockyards, it is, therefore, a wise measure of protection to have every cow tested with tuberculin before the payment of the cost money is made.

In the purchase of cows for the dairy, it is better to buy those that are about four years of age rather than younger. By that time the real ability of the cow to produce milk will have manifested itself. In the six years following that age the cow will produce her maximum yield of milk and will produce the strongest and best calves.

In selecting a locality in which to hunt for good cows, it is always well to find out what kind of bulls have been generally used in the different localities. Where dairy bulls have been extensively used, one will search with the best success for dairy cows of value. W. H. Underwood.

SOME DAIRY THOUGHTS.

To the Editor of The Homestead:

I have found in the use of silage that none is wasted in feeding, that all the corn crop can be used to advantage in the silo and that it is a good feed for producing cows. When all the feed given animals is consumed good results are sure to come, and this is an important item in any kind of feeding. Corn made into silage is cut into very fine pieces, reduced to a soft and palatable condition through fer-

You need a new DE LAVAL Separator NOW

1st — If you are still using some gravity or setting process of creaming—

Because your waste is greatest and quality of product poorest in mid-summer, when the milk supply is greatest.

Because time is of greatest value on the farm at this season and the time and labor saving of the good separator counts for most.

Because the skim-milk is poorest without a separator in hot weather and often more harmful than helpful to calves and young stock.

Because the work of an improved De Laval Cream Separator is as perfect and its product as superior with one kind of weather as with another.

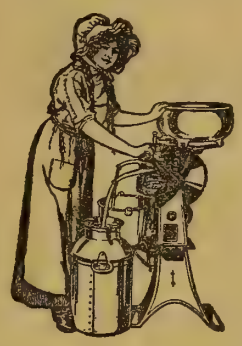
2nd — If you have a very old De Laval or an inferior separator of any kind—

Because the losses of the poor separator from incomplete skimming and the tainted product of the difficult to clean and unsanitary separator mean most when the bulk of milk is greatest.

Because of the great economy of time at this season in having a separator of ample capacity to do the work so much more quickly.

Because an improved De Laval separator is so much simpler and more easily handled and cared for than any other, and you cannot afford to waste time these busy days "fussing" with a machine that ought to have been thrown on the junk-pile long ago.

Because the De Laval separator of today is just as superior to other separators as the best of other separators to gravity setting, and every feature of De Laval superiority count for most during the hot mid-summer months.



These are all facts capable of prompt and easy demonstration, whether you have a poor separator or none at all. The new De Laval catalog, to be had for the asking, helps to make them plain. Every De Laval local agent stands eager to do so with a machine itself, with no obligation on your part to buy unless he does—and that to your own satisfaction.

WHY DELAY? Why put off so important a step as the use of the best cream separator, which you need more RIGHT NOW than at any other time?

The De Laval Separator Co.

More Profits for You this Year

THE new 1913 Model "Ohio" Silo Filler outrivals *everything* we have *ever* offered you heretofore. It even overtops all the old "Ohio" models that held the leadership for *efficiency* at expositions and experiment stations. Here's the very *best* result of our 59 years' experience. The "Ohio" has always been the leader of the world—this year its most famous records are eclipsed in

The New 1913 Model "OHIO"

It has the *ideal* combination of *speed* and *economy*. With it you can now fill the highest silo *quicker*, *cheaper*, and with *better* cut silage than any silo man ever dreamed of.

Such features as the "Bull Dog" Grip feed rollers—the non-twisting, traveling feed table, the big throat opening, fan case, and 10-inch blower pipe that takes care of *enormous* capacity—the doubly braced knife cylinder (bearings at both ends) that insures uniformly cut silage by preventing the knives from springing away from the cutter bar—all have been improved to show *greatest possible efficiency*.

It's Easy to Make Profits With An Equipment Like This!

In the new "Ohio" the drive pulley, cutting cylinder and blower fan are all on the main shaft. This enables the big fan lift to operate at *low speed*, yet send silage to the top of highest silos.

Low speed means safety. You've never known an "Ohio" to explode. The low speed of the blower fan is boldly printed on every fan case—650 to 700 R. P. M.

The "Ohio" is made in all sizes—cuts all silage making crops—50 to 250 tons in a day on 6 to 15 H. P. Easily converted into a shredder.

Write For the Full Story

We want every man to know the profit making possibilities of silo filling with the new 1913 "Ohio." Send us your name today. You want an *economical* machine—get the facts on the leader—59 years at it and now better *than ever*.

In writing ask for "Silo Filler Logic" and new catalog.

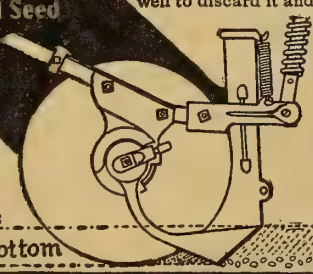
"Modern Silage Methods," 264 pages, mailed for 10 cents, coin or stamps.

The Only Drill With a Perfect Furrow Opener

HERE'S the drill that will greatly increase your crops and profits, just as it has done for hundreds of other progressive farmers. It is equipped with our wonderful DISC SHOE FURROW OPENER, the only one that combines every advantage of the single disc for cutting trash and penetrating hard ground, with every advantage of the shoe for forming the furrow and depositing the grain. It's the only furrow opener that packs the seed bed after the disc has opened the furrow. The shoe carries the seed to the bottom of the packed furrow. Every seed counts. Every seed is sown at a proper, even depth. So every stalk comes up and ripens evenly and the grain grades up best. The shoe prevents any dirt from falling into the furrow until after the seed is deposited.

The New Peoria Drill

Every Seed Laid in a Packed Seed Bed



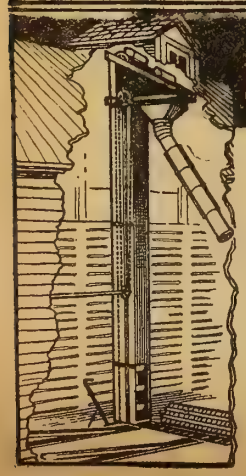
Surface

Furrow Bottom

is the only one equipped with this Disc Shoe Furrow Opener. So the New Peoria is the drill that is sure to increase your crops and save your seed. It is the drill that insures every seed the three essential requirements for successfully growing small grain—Heat, Air and Moisture. Even if you have a new drill of some other make, it will pay you well to discard it and buy a New Peoria,

Do not think that the wonderful Disc Shoe Furrow Opener is the only advantage of the New Peoria Drill. Every other part is just as superior. Let us prove it. You take no chances on the New Peoria. Every drill sold on an absolute guarantee. Let us send you a booklet and all the facts and figures, also opinions of men who know. Send your name and address on a postal now. It's worth money for you to know all the details.

Peoria Drill & Seeder Co.
2435 North Perry St., Peoria, Illinois



A MACHINE LIKE YOUR GRAIN DEALER USES

THE "Hart" Bucket Elevator is the most massive and securely made elevating device you can buy. Will work under all conditions and handles all kinds of grain, even coal, most economically. Withstands continuous usage without causing trouble This machine, when installed, requires less room, will not block your driveway and is always ready for use.

FINEST quality material is used. Buckets are made of pressed steel 16 inches wide attached to No. 77 sprocket chains. The "Hart" machine absolutely cannot clog. Grain cannot splatter over or carry back at the top. The special front panel, encasing the buckets, makes it impossible for grain to drop elsewhere than into the bin. Machine can be operated with overhead lift or log dumping device.

THE elevator can be installed in any of your cribs—or if you intend putting up a new barn or crib, ask for our **architects plans, furnished free**, to fit your exact needs. Just tell us capacity desired and type of elevator and we'll send information that you should have. Remember—buying the "Hart" machine means having a real elevating plant. Write today for catalog.

HART GRAIN WEIGHER COMPANY
Department A PEORIA, ILLINOIS

mentation in the silo, that it is much relished by the cows, and they leave none of it in the mangers to be thrown away.

Many dairymen seem to think that a cow is on full feed when she is allowed the privilege of good pasture or fed hay or fodder. Such is not the case. Hay and fodder are all right to be fed as roughage for the cow, but some nutritious and concentrated feed must be fed in addition to this if the cow is to do her best. Many cows are fed bulky feeds, and not fed anything to balance the ration. Consequently the cows do not give as much milk as is expected of them, and they are condemned as "poor milkers." The profit from a cow comes from the extra amount of milk she will give over what she ordinarily gives on pasture or coarse feeds. If the average cow was fed more concentrated food in addition to her fodder and hay, she could be made to produce much more than she does, and in most cases make a profit.

If a calf is to be raised by hand it should never be allowed to get with the cow after the hand feeding begins. If the calf is a heifer and is to be raised up for home use, if allowed to get out a few times during its early life, it will give much trouble in sucking its mother and also other cows. The mother will also worry over it and refuse to give down her milk if the calf is allowed to get with her every few days and take nourishment. If they are kept securely apart for a few weeks they will both forget it.

Tunnel Hill, Ill.

ILLINOIS CATTLE FEEDERS' MEETING.

That the Illinois cattle feeders are interested in the subject of baby beef production through the use of corn silage is evidenced by the large attendance at their third annual meeting, held on the university campus at Urbana, Illinois, Tuesday, July 15th. Nearly 300 progressive cattle feeders of that and adjoining states came to hear the program on general live stock topics, and to look over the seventy-five baby beeves which have been on feed since December 14th.

Pres. Clyde Ford, of Geneseo, Illinois, presided and the program of the day consisted of a visit to the feed lots to inspect the finish of the steers, and the feeding plant in actual operation.

Mr. H. P. Rusk, of the department of animal husbandry, presented the results of the recent experimental work in feeding beef cattle at the university. He drew the following conclusion from the experiment:

When properly supplemented with cottonseed meal, corn silage made cheaper gains than alfalfa; produced a higher finish, and returned a larger profit.

The addition of alfalfa hay to a ration of shelled corn, cottonseed meal and corn silage, increased the rate and cost of gains, produced a more valuable finish and yielded larger profits.

The substitution of alfalfa hay for half of the silage in the middle of the experiment increased the rate and cost of gains, produced a higher finish and yielded larger profits.

The addition of cottonseed meal and silage to a ration of corn and alfalfa hay produced more rapid gains and a higher finish, reduced the cost of gains and yielded a larger profit.

The addition of oats to a ration of shelled corn and alfalfa reduced the rate of gains, increased the cost of gains and produced less profit.

Messrs. J. T. Alexander and F. W. Fletcher, of Chicago, placed values on cattle from which the profits of the lots were figured.

The chief address of the day was delivered by Charles E. Thorne, director of the Ohio Experiment Station, on the subject of "Live Stock in its Relation to Soil Fertility." Much encouragement was received by the live stock farmer from this address which closed with the following helpful remark: "I have, therefore, to say that the outlook for the live stock husbandry was never more encouraging than it is today."

Other talks were made by John T. Alexander, on the "Market Outlook," and Dean Skinner, of Purdue, on "The Value of Feeders' Associations."

The following officers were elected for the coming year: Clyde Ford, Geneseo, Illinois, president; Claude Thomas, Harris, Ill., vice-president; H. P. Rusk, Urbana, Ill., secretary-treasurer

No Hoops to Tighten
No Wood to Shrink

No trouble to erect and no expense to maintain. The only silo that is built throughout of materials that are unchanging and permanent. Rust-proof, rot-proof, frost-proof, acid-proof, time-proof and fool-proof. Wind, fire and lightning cannot affect the

AMERICAN INGOT IRON SILO

Absolutely air-tight and smooth on the inside. Doors open inward. Roof with ventilator scuttle door and railing included in price of silo; also ladder and chute for silage. No extras to pay for. Quickly erected. A wrench is the only tool you need. The "American" cures and keeps silage perfectly. No more mildew. No seepage or leakage. No loss of succulence. *Write today for catalog J.*

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

LINEBREEDING.

To the Editor of The Homestead:

With the advent of more pure-bred poultry more and more are people making inquiries about linebreeding. Remembering the old order of things when no such thing as new blood was supposed to be needed and the roosters were kept until they were patriarchs, with the result that the flock got worse and worse, the novice is not easily converted to anything bordering on inbreeding. With him inbreeding and linebreeding are one and the same thing and in league to send one's chickens to the bow-wows.

Although synonomous in actual practice inbreeding and linebreeding are a vastly different proposition. Inbreeding at random will in a short time ruin a flock that it has taken years to build up. By keeping over every manner of fowl without knowing the relation of anyone to another and permitting promiscuous mating we will soon be the possessor of a flock run down in vigor, color and size. Weakness begets weakness and when mated together this undesirable quality is intensified. Many of our best breeds are the result of numerous crosses of birds of different types and conditions and if permitted to deteriorate the influence of the plebeian ancestors is evident when least expected or wanted.

Linebreeding proper is cutting out every undesirable individual, year after year, and combining fowls similar in characteristics to the extent of 25 per cent and not more than 50 per cent of their inherited blood. This precludes the mating of brother and sister, even though they are very desirable as individuals. Sires mated to their own pullets we have found to be the best of all methods and hens to their cockerels the next best. In some instances a sire has been used with his daughters, granddaughters and great-granddaughters, and with success, but unless one has time and money to work out a theory it is not to be recommended. Farmers, as a rule, desire early results rather than to wait indefinitely for a questionable profit.

Only for linebreeding there would today be no pure-bred families of fowls. This system gets rid of bad qualities and intensifies the good traits. The one exception to this we have found to be regarding size Even though the largest and best individuals were selected the third generation was hardly so large though in everything else including stamina they were superior each succeeding generation.

To properly linebreed it is necessary to know every bird and its parentage, and mate accordingly. This would not be as complicated as it at first would seem. By clipping the web between two certain toes for one generation and between others for the next and keeping a record it is easy to know the parents and offspring. To accomplish results it is necessary to keep one yard separate from the general flock each year. This is the cheapest and best way to procure cockerels for the common flock. Instead of purchasing a half dozen cockerels of questionable lineage each year buy one choice bird from some reliable breeder who keeps birds of your own particular strain and mate him with eight or ten of your best and most uniform hens. If the result is satisfactory and the cock is a vigorous breeder yard his best pullets with him the following year. Be very careful in the selection, as a fault will probably be multiplied by two in the young stock. Better use only four pullets in your mating than to risk anything doubtful.

This linebreeding admits of much wider discussion, but few people care to carry it further. To anyone who desires I recommend the study of the I. K. Felch breeding chart.

Minnie G. Stearns,

Because the apples are so thick on the trees in the big Reno county (Kansas) orchards, gangs of men are being hired to go through the orchards and knock green apples from the trees. This is necessary, the fruit growers explain, to prevent the boughs from breaking down under the weight of the growing fruit and also to improve the quality of the remaining apples.

Ask your neighbor to subscribe for The Homestead.

The above is a picture of Henry Fesenmeyer's new hog house on his new farm at Clarinda, Iowa. This is the home of the three great boars, A Wonder, Giant Wonder and Big Ben, three of the greatest big-type boars now living. Write Mr. Fesenmeyer for catalog of his great sale which takes place August 12th.

TWO HORSES ONLY

This means that two horses can easily handle the "Best" digger, either in clay or sand and at the same time get the maximum amount of work out of it. The many testimonials from satisfied customers prove this statement.

THE BEST POTATO DIGGER

Gets all the potatoes, and leaves them in a compact row back of the machine. Front trucks built so team has absolute control of front wheels which prevents sidewing off the row when digging. Shovel blade 22 inches wide which insures getting all the potatoes. There is no friction to wear out the machine or increase the draft. Everything turns around. Here's the digger you are looking for. It fills that long felt want. A postal will bring you our complete catalog. Please mention The Homestead when writing.

THE HOME

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Postoffice Box 639, Aurora, Missouri.

WITH THE EDITOR.

In a remarkable book dealing with the methods pursued in the training of his son Karl Witte tells that while the lad was yet quite young he acquired the habit of "putting himself in the other fellow's place." His father endeavored to make him also thoughtful for dumb creatures. An incident will suggest this plan.

One day, when the child was about three years old, there were guests at the parsonage who made much of little Karl. While they were talking to him the family dog came into the room and the boy playfully caught it by the tail and drew it to him. As he did so his father caught Karl by his long hair and pulled him just as he was pulling the dog. The surprised child turned to look at his father and, seeing the indignation on his face at once released the dog. His father at once released him; but, as he did so, he asked, "How did you like that?" The boy replied, "Not at all!" His father thereupon asked, "Well, do you think the dog liked it?" At the same time he sent the child out of the room.

Pastor Witte believed that in teaching his boy to be thoughtful and considerate of animals he was not only protecting the rights of the helpless, but also training his child in habits of mind and conduct which would be a blessing to himself and to his fellowmen. It is a great pity that more parents do not grasp this idea. Occasionally parents do. A mother recently wrote:

When little ones play roughly with their pets, or treat animals cruelly, I always feel that it is from lack of understanding, and I try to teach my children. When our first boy was about seven months old we got him a rubber dog and a small, furry cat. Every time I gave them to him I handled them carefully and said, "Pretty doggie," or "Nice kitty," adding, "Be careful, dear." I treated the animals as if they were alive and before many weeks the child noticed that if he were careless or rough with them it grieved mother. After this if he wilfully transgressed the unwritten law that the dog and the cat were to be handled gently I quietly took them away from him. In this way when he was old enough for a real, live kitten he never squeezed or tormented it as so many children do, and gradually I had the joy of seeing him become most considerate of his pets. I attribute his kindness to his sisters and brothers and his obligingness in the home very largely to the fact that as a little fellow he learned to be kind to dumb creatures and so formed the habit.

HOME AND HOMEMAKING.

MY CREED.

This is my creed: To do some good,
To bear my ills without complaining,
To press on as brave man should
For honors that are worth the gaining;
To seek no profits where I may
By winning them bring grief to others,
To do some service day by day
In helping on my toiling brothers.

This is my creed: To close my eyes
To little faults of those around me;
To strive to be when each day dies
Some better than the morning found me;
To ask for no unearned applause,
To cross no river till I reach it;
To always have a worthy cause,
To fearlessly and fairly preach it.

This is my creed: To wisely shun
The sloughs in which the foolish wallow,
To lead where I may be the one
Whom weaker men should choose to follow;
To keep my standards always high,
To find my task and bravely do it;
This is my creed—I wish that I
Could even live half way up to it.

TO MAKE CURRANT JELLY.

The requisites for the work are a good quality stone pot or porcelain-lined kettle, an earthen bowl of good size into which the fruit juice may drip, shallow tins for heating the sugar, a long-handled wooden spoon, a coarse jelly bag, paraffine to cover the jelly before putting away, and plenty of jelly glasses with glass covers if possible. After thoroughly washing, place the currants in a stone jar or the preserving kettle and set in a large pan of water. As the currants begin to heat, mash with a large wooden pestle until reduced to a pulp. Take the jar off the range and scooping up the pulp put in the jelly bag to drain. This is best done the night before the jelly is to be made, as that allows time for the juice to drip by itself and the jelly will be clearer than when it has to be squeezed through the bag. When the juice is all extracted, measure out by pints and return to the kettle. Take as many pints or pounds of sugar as there are pints of juice, and place on the shallow tins to heat in the oven, taking care they do not get hot enough to discolor the sugar. Boil the juice just twenty minutes from the time it begins to boil and throw the heated sugar in, stirring rapidly all the time. As soon as it is all dissolved, remove the spoon, let the juice just come to the boil again and take at once from the fire, pour into glasses and seal.

ABOUT THE HOUSE.

Most housewives use the broom dish cloth, made of cord attached to a handle, which is vastly more convenient than the old method of immersing the arms to the elbows.

If the house is infested with ants, dip a sponge into sweetened water and lay it where they can get at it. They will soon cluster upon it and the sponge can then be dropped in hot water.

To take mildew out of cotton goods wet the article and rub on it equal parts of laundry soap and chalk mixed well together, then place in the sun, when the stain will usually disappear. If not—Eau de Javille or a solution of oxalic acid and hot water applied to a mildew stain on white linen will obliterate the discoloration. After applying, expose immediately to the sun.

A thin board tacked across the bottom of the screen door will save the screen from considerable injury.

When silver spoons or forks become discolored from eggs, scour them with fine table salt. This will remove the discoloration, which is caused by the sulphur in the egg, and not scratch or wear the silver.

GREEN PEA SOUP.

Cover a quart of peas with boiling water and let boil until they will mash easily; mash, and add one pint of water. Cook together two tablespoonfuls of butter and one of flour until it is smooth, but not brown; add gradually one cupful of hot milk, and pour into the peas; add salt and pepper to taste, and let boil up. Lastly add a cupful of sweet cream, and strain. When serving add to each dish a spoonful of whipped cream.

AMONG OURSELVES.

You have heard the expression, "The brooding of nature." The words mean more or less to you according to whether you are given to "brooding." Life must be conducted into quiet places for us to brood—and we must have something to brood over. These early mornings, or these summer evenings, bring to some of us thoughts that are things, thoughts that enter into the very warp and woof of our life and that enlarge our vision. One of our women, Mrs. Ed. Bliss, has been thinking over this large thing we call "Life" and she is noticing how we live it, not merely as it affects ourselves, but also the effect our ways of living have on others. Mrs. Bliss says:

It seems to me, when thinking of life, that it is one big cable chain run by some hidden power. All things connect so closely. For instance, a woman that is slovenly in dress is not always a slovenly housekeeper. A slovenly housekeeper is apt to be slack in her speech. A woman of neatness and refinement will never relate so-called "funny" yarns, or tell of little things that pass between herself and her husband. Let a woman tell you her varied experience before or after she was married and you will have a doubt in your mind if she is as true as she ought to be. Children absorb slackness of speech as a sponge does water. How often you hear things discussed before little three or four-year-old children! They then repeat it to an older child. The elder one will tell the meaning. Then these people will wonder where their children "learn such stuff!" Home life should be kept sacred just as well as the house kept clean or the meals well cooked and served. Where a man and wife respect the home and the rights of each, striving to keep it up to a high standard, inside and out, you will rarely ever find those troubles that are filling the pages of our papers and magazines with stories that are better never told.

This letter quickly makes us think of the fate in store for "whosoever offendeth one of these little ones." Don't you think that there is so much, too much altogether, heedlessness of tongue? We let our tongues say things we would never dream of doing. We boast, we make reckless

statements, and while making them care little who hears. In our daily lives we, of all people, know how easily weeds take root, produce seed and scatter. Therefore, ought not we, of all people, to sow clean words?

And the fruit of such! What a heart-full of glowing gratitude dwells in the breast when, as writes Mrs E. M. S., a parent is able to cherish really joyful memories of the flowers of the home, and especially so when they have been culled to bloom in the Fields beyond the River. Our hearts are touched as we read:

Here comes another "old-fashioned mother," who was blessed with a similar "machine"—oh, so loving and kind, and besides was a dish washer and a bread mixer; in fact, everything connected with homemaking and comfort. She was fair, tall and beautiful; graduated last spring in the high school of Cantril, only nineteen years of age. At the tender age of nine, when her older and only sister was married, feeling the responsibility then resting on her she stepped into and filled her sister's place so intelligently she became the constant companion of her mother and often would say, "I am going to stay at home and take care of you and papa." But on April 16th the lovely one was removed from us. Oh, how lonely and heartbroken we are. So, dear mothers, watch over and give particular loving care to those dear girls while they are permitted to stay with you. You cannot be too careful of them. You who are still blessed with the presence of your girls, think of and sympathize with me in my loneliness.

What are more precious than such jewels of memory? Fortunate indeed are those who wear them in their hearts. And what shall we say of the folly of people who through selfishness, or indolence, or mistaken kindness deprive themselves of the opportunity of securing such jewels? Listen to Mrs. Ferrol, who was a deprived daughter and is now a mother with great desire to wisely guide her little one:

While reading in your good paper lately I read the letter from the lady who helped the boss make the screened porch. I would love to have a porch like hers. They are just as dandy as they are handy. My folks at home have one and couldn't get along without it. We live on a 160-acre farm with a large house, four rooms down stairs and three up stairs. There is a porch in front, but none to the kitchen. So you see I am not so lucky as the other lady. I will have been married four years October 9th. We have one boy three years old October 11th. He is all the world to us—our only child. I guess that is why we worship him so, but yet he doesn't get to do as he pleases. He knows what to do when his papa says: "Will you mind?" and that's enough. His little heart is broken and he runs to mother to be petted, but I tell him he must mind and be a good boy and papa won't scold. There is where so many make a serious mistake. One tries to make a child mind and the other gathers him in their arms and pets him. That makes bad children. How many of you mothers are letting the girls sit out in the swing or some nice shady place with a book while you are over the ironing board or are washing, baking, cleaning the house or getting supper for tired father? Mothers, don't let your children get married like I did. My mother never would let us girls do anything but wash dishes and not very much of that and when I got married my mother-in-law laughed at me because I could not bake bread, but she can't laugh now, for my bread is as nice as anyone's.

Here is a song a lady of the Home Department asked for, writes Mrs. Kinstle:

CHEROKEE.

Milk-white roses, Cherokee roses,
Starry blooms that the dark encloses!
Hark to the wild song,
Strange song, mild song,
Sometimes a love-song, sometimes a child-song!
See where the dreaming palmetto dozes,
I wait here, singing of the Cherokee roses!

Fair little lady, moon-white lady,
White as the flowers in your garden shady,
When I have fled, love,
When love has sped, love,
Come to our tryst, love, drooping your head, love,
Saying, "Here strayed he!" Sighing, "Here stayed he!"
Singing to, dreaming of, calling his lady!

Cherokee, Cherokee, Cherokee roses!
Hear the song in the garden closes!
Hark to the light song,
Mocking-bird's bright song,
Lover's low love-song, passionate night-song;
Who is the singer the sweet dark encloses?
Someone who sings of the Cherokee roses!
Milk-white roses, Cherokee roses,
Dream-pale blooms that the night encloses!
—Night Song at Cherokee.

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Aunt Mary, Hawley, Minn.

A LESSON FROM THE WEEDS.

(First prize.)

How many of you want to hear about the value of weeds? That doesn't sound very interesting, for nearly everyone who lives on a farm has a natural horror for weeds, and do you know why? It is because they are thieves, springing up among grain or vegetables they rob the soil of its most valuable elements, and if left alone, they even destroy the crop. So you see they are robbers and murderers.

But, after all, weeds may teach us a lesson, if only we are willing to learn. You may cut them off to the ground, but they will grow again; dry weather may retard their growth, but will not kill them; they simply won't give up unless their roots are destroyed, but keep climbing onward and upward. They told me this motto. This is what it is: "Aim at the stars always, even if you never reach the treetops." Now I think that would be a pretty good motto for American boys and girls. Don't you?

—Myrtle.

A Summer Night.

(Second prize.)

All day the waves tossed high. All day the ceaseless roar of the angry sea could be heard above the raging tempest, as with terrible force the dark clouds of storm swept o'er the powerless earth.

But at last their power is spent, and as the evening hour draws near, the storm-swept world now lies at rest. Yet still the gray clouds frown, and slowly the shades grow deeper; when suddenly the silent land is flooded with a golden light. The trees wear gowns of richest velvet set with countless sparkling gems, while the western sky is one great golden throne, pillar upon pillar, all glowing with a radiance so wondrous that it seems the gates of heaven have suddenly been opened to give to this dark world a glimpse of that shining throne beyond.

But now a peculiar softness is gradually enveloping the world with a veil, sweet soft and still; a charm that calms the restless sea and brings peace and quiet to the troubled world. The western sky still stained with many brilliant hues is slowly, surely blending into that one soft purple sheen—Night.

A sweet perfume rises on the dampened air; it comes from the ripening wheat, from the clover, from the thousands of roses, from the dew itself. It fills the world with fragrance. It is a balm that smooths a wrinkle from the aged brow and speeds the weary footsteps toward that sweet haven, Home. —Lois Stewart, age 15.

Wee Wild Things.

(Third prize.)

Have you ever seen little wild ducklings? They are about the cutest little things I ever saw. When they get about a week or so old they will dive under the water every time you come near them. But when they are just a few days old they will not dive when you come near. They look so cute when they swim along on the river all in a bunch. When you venture near the shore where they are, the old duck will dive under the water and come up somewhere below, and fly off down the river, leaving the little ducks there. The little ducks will dive and come up under the banks and rocks. And if you get after them they will scatter all along the river. And the first thing you know they are all out of sight. If you come back after awhile you will hear them hollering, and the old mother duck gathering them up.

The little young sage-hens are about the next to the cutest. The old hen makes her nest in some weeds, and lays about nine eggs in it. When they are all hatched they begin to wander around. It is fun to watch them walk. They walk so funny. They live on bugs and grass. They don't eat much grain.

I have told you about two kinds of

Keep a
Kodak Record.

Preserve for future reference an indisputable record of your crops, your growing stock, the condition of buildings and fences and roads—by means of photographs.

Make sales of your stock by means of photographs; bring home ideas from other people's farms by means of photography.

You can make good pictures by the Kodak system. It's all very simple—and less expensive than you think.

Catalog free at your dealers or by mail.

DOES YOUR
Harness Need Mending?

SEEDING, corn plowing, haying, harvesting and threshing are all destructive to harness. No doubt your harness needs mending. Anyone can mend his harness with my Speedy Stitcher. The broken part will look just like a harness maker had mended it.

The Speedy Stitcher is the latest invention and the most effective of anything in the form of an Automatic Sewing Awl ever offered. Its simplicity makes it a thoroughly practical tool for any and all kinds of repair work, even in the hands of the most unskilled. With this Awl you can not only mend harness, but shoes, tents, awnings, pulley belts, carpets, saddles and suit cases.

The Speedy Stitcher is provided with a set of diamond-pointed, grooved needles, including a special needle for tapping shoes. It also contains a large bobbin, from which the thread feeds. Both needles and bobbin are enclosed inside the handle out of the way. This Awl has a tension which enables you to tighten your stitch. These valuable features you will not find in any $1.00 Awl.

MY BIG FREE OFFER

I will give one of these excellent Speedy Stitchers absolutely free to anyone who will send me $1.00 for one year's subscription to The Homestead.

Kindly use the coupon below and be sure to send your order in today before you forget it.

PLEASANT FIELDS OF HOLY WRIT
Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON
3d Quar. Lesson 4, Ex. 4, 29; 6, 1, July 27, 1913.

MOSES' REQUEST REFUSED.

Sweet are the uses of adversity,
Which, like the toad, ugly and venomous,
Wears yet a precious jewel in his head.—Shakespeare: As You Like It.

A noble Roman stood wrapped in his toga, gazing at his lovely marble villa as it disappeared in devouring flames. A friend ventured to approach and proffer sympathy. The sententious reply was: "If it had not perished, I would have perished." So we may say, but for the misfortune of the Egyptian bondage, Israel would have perished. The "ugly and venomous" experience of the brickyard held a jewel, after all. The stream of their national life was forced into a new and uncongenial channel. By choice and hereditary instinct they were used to the free and tranquil manner of the nomad. It was a bitter transition from the "land of verdure" to the brickyard; from driving their cattle to being driven like cattle; from the easiest of all vocations to the most laborious of all. No paraphrase can possibly intensify the forceful phraseology of the original narrative. Pharao's object was decimation. Bailiffs with hard hearts and bludgeons were at a premium. They afflicted with their burdens. There was a ferocity (rigor) in their exactions. They intend nothing else than to break in pieces and crush the captive race. They embittered their lives. The tally of bricks required was always waxing, though the material to make them steadily waned. Affliction, sorrow, oppression, sighing, groaning are oft recurring words in this dismal chronicle of slavery. This most prolonged and irritating bondage was, however, like the ax the very blow of which sets free the pent-up fragrance of the sandalwood. It was like the rude trampling after which the camomile emits its richest odor. The first sweet use of Israel's adversity in Egypt was to loosen the hold which that country had obtained upon the emigrant nation, and to make them homesick for Canaan. It is probable that nothing short of this terrible ordeal would have been sufficient to uproot them from a land Providence never intended they should abide in permanently. The weird country exercised its mystic spell even after they had left it far behind them, and they sighed for the onions and fleshpots of the Nile land. Egypt too, was the fiery furnace where a loose population was fused into a compact nationality. Nothing surpasses common suffering in accomplishing this end. Their like pains and indignities made them feel alike—hope and aspire alike. And as "sharp frosts nourish corn, so did the sharp afflictions" of Israel in Egypt nourish their graces. They were shut up to faith in God. No eye pitied them, no arm could deliver them but his. They were led to admit the justice of God's anger at their manifold sins, and to repent of them. Their aspiration for their divinely-promised "rest" in Canaan was quickened thereby. When the great assay was finished, God quenched the furnace fires with the waters of the Red Sea. The new-born nation, christened in cloud and sea, came up out of the depths singing antiphonally such a paean as earth never heard before. To the praiseful acclaim of the male chorus, "I will sing unto the Lord, for he hath triumphed gloriously," the female responded, "Sing ye to the Lord, for he hath triumphed gloriously."

If the element of luck enters into farming anywhere it is in the drying of the hay crop and even with this the failure is often laid to bad luck when just a little hustle would have meant good luck and success.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

6054 Ladies' Skirt.—This is a six-gored model with the closing at the left side of the back. It has a plait at the lower part of the front and back gores which gives convenient and graceful width at the bottom. The skirt may be used for separate wear or as part of a complete costume or coat suit.

The pattern 6054 is cut in sizes 22 to 30 inches waist measure. Medium size requires 4⅛ yards of 36-inch material. Price of pattern ten cents.

6238 Misses' Dress.—Young girls will like this stylish dress, with its simple jacket, closed in front and gathered at the waistline where the hip sections are attached. The plain sleeves are inset and the two-piece skirt is made with raised waistline.

The pattern 6238 is cut in sizes 14, 16 and 18 years. Medium size requires 4⅝ yards of 44-inch material. Price of pattern ten cents.

6230 Girls' Dress.—This design shows an uncommonly dainty frock. It has the drop shoulder effect, with an ornamental arrangement of the overlapping body portion. The sleeves may be short or long. The skirt is a single straight piece and is gathered and attached to the waist beneath a belt.

The pattern 6230 is cut in sizes 4, 6, 8, 10 and 12 years. Medium size requires 2¼ yards of 36-inch material. Price of pattern ten cents.

6219 Smart One-Piece Dress.—The most fashionable of all gowns this season is the one-piece model. Our design shows a simple bodice, with ornamental closing, the neck finished with a low collar, the plain sleeves ending in a cuff. The four-gored skirt has a seam in the center of the front and also of the back. It has the closing at the front.

The pattern 6219 is cut in sizes 34 to 42 inches bust measure. Medium size requires 4 yards of 44-inch material. Price of pattern ten cents.

CUP ELEVATOR

Feb. 12, J. H. Stewart, Dickens, Iowa.

FIELD MEN.

M. T. White, western Iowa and Nebraska (north of the Platte river). Address 4015 Izard St., Omaha, Neb.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

A. T. Cole, Missouri, Kansas and Oklahoma. Address 3900 Holmes St., Kansas City, Mo.

John C. Halderman, Kansas. Address 4347 Harrison St., Kansas City, Mo.

J. C. Price, southern and western Nebraska. Address 145 So. 28th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

If wishing to a Fox Terrier dog read the advertisement of W. Harr, Riverside, Iowa, appearing on page 13.

E. Wood, Glenhaven, Wis., has dogs for sale. For stamp he will send particulars. His advertisement appears on page 13.

Yearling Indian Runner ducks are offered for sale in dozen lots by R. O. Dickson, Box 30, La Harpe, Ill., in his advertisement that appears on page 13 of this issue.

Duroc Jersey boars of size, quality and breeding can be had of Hugh M. Ficke, Long Grove, Iowa. Pigs by such boars as Cherry Chief, Royal Col., Professor, S. E.'s Premier and Premier Gold Bond are offered. See page 22.

Fall boars by Disturber, S. E.'s Premier Col., and Captain Model and a grand lot of spring pigs by the above boars and Cherry Chief, Volunteer and High Col., are for sale by the noted Duroc Jersey breeder, S. E. Eakle, Prophetstown, Ill. See page 22.

If you are on the market for an outstanding good Poland China boar pig, sired by the 965-pound Long King's Equal, then read the advertisement of John B. Lawson, Clarinda, Iowa, and get an order to him just as soon as you can. Leave it to Mr. Lawson to pick the pig and we will guarantee he will send you a good one. Write him about these right away and kindly mention this paper.

E. J. Augspurger, Pulaski, Iowa, whose advertisement of Poland China swine appears on page 28 of this issue, in sending in copy for same, writes: "I have some choice, big-type fall boars sired by Jumbo's Big Prospect for sale. Jumbo's Big Prospect is one of the best big-type boars in southern Iowa. The boars I am offering for sale are out of sows of choice breeding. The fall gilts are equally as good, and I also have a fine bunch of March pigs, both sexes, about half of which are sired by Equal's Wonder, a grandson of A Wonder, and the others by Jumbo's Big Prospect. Homestead readers wanting some choice ones should call and see those that I have for sale or write me their wants."

While at Jewell, Iowa, last week, a representative of The Homestead called on O. J. Satre, who has established a herd of Poland China hogs which, although not large, is on a foundation of the best sort and certainly has a promising future. Mr. Satre has at the head of his herd, Big Howard, a large, well-formed, excellently bred two-year-old hog that has merit enough for almost any good herd. His sire was Big Jones, one of the most popular big-type hogs in use on a prominent southern Iowa herd. His dam was Matchless Wilkes and back of that there is a line of breeding that has been popular for twenty years or more. Mr. Satre's foundation brood sows include Mollie B., Flossie, Leonora, Geneva and Mollie I. B. Mollie B. is a great big growthy sow by Long Price, he by Chief Price Second. It will be readily recognized that this is a popular pedigree. Flossie is a daughter of Ringleader Second. Leonora and Geneva are litter sisters and daughters of A Wonder King, he by the noted A Wonder. Mollie I. B. is by a Longfellow sire and her dam was a daughter of Chief Prince Again. The crop of spring pigs are good ones as might be expected and a little later other information will be given concerning them. Mr. Satre finds that with his small herd he could not well make use of Big Howard another year and for that reason now offers him for sale. He is worth a good deal more than the $50 which he will accept for him. There are also two small boars that will be sold for low prices. Address for further information, O. J. Satre, Jewell, Iowa. See advertisement on page 23.

E. W. Kreischer, Mt. Vernon, Iowa, has some good big-type fall Poland China boars for sale at right prices. See page 23.

See page 23 for the special thirty-day boar sale announcement of W. H. Cooper, Hedrick, Iowa. His big-type Polands are the kind that please.

W. M. Myers, Beaman, Iowa, has for sale some good yearling Scotch Shorthorn bulls of the Marr Flora and Barmpton Leaf families. See page 24.

John Krebs, Riverside, Iowa, has a fine lot of Duroc Jersey boars for sale of the big type, sired by Col. Joe, one of the good sons of the noted sire, Proud Col. See page 22.

W. W. Vaughn offers some select Scotch Short-horn heifers for sale. They are bred to Marshall Gold, a grand young bull now heading Wildwood herd. See page 24.

Yearling Duroc Jersey boars sired by Volunteer, an International champion, Model Wonder and Proud Ohio Chief are advertised for sale by M. S. Pratt, Frederika, Iowa, on page 22.

John Cash, Jr., Parnell, Iowa, announces a public sale of high-class Aberdeen Angus cattle to take place at Williamsburg, Iowa, on October 16th. Extra good cattle of the most approved blood lines will be sold. Anyone interested should keep this date in mind.

John I. Dripps, Springville, Iowa, has a fine lot of fall and spring big-type Poland China boars for sale. The fall boars weigh over 300 pounds and have been vaccinated against cholera. If you want a good boar see page 23 and write Mr. Dripps, mentioning The Homestead.

1913 Model Ohio Silo Filler.

On the top of fifty-nine years of successful manufacturing the Silver Manufacturing Company have placed a number of improvements on the new 1913 model of the Ohio silo filler. With it the company claims that our readers can fill the highest silo quicker and cheaper with good ensilage than even silo men dreamed of. Full information about the improvements will be found in the advertisement of the Silver Manufacturing Company whose address is 309 Broadway, Salem, Ohio, on page 12 of this week's issue.

Lawson's Boar Bargains.

On page 23 John B. Lawson, Clarinda, Iowa, is offering some great bargains in spring boars sired by Long King's Equal and A Wonder Jumbo. We have seen these pigs and we will say that he has a lot of boars that will make the best of herd boars and inasmuch as he is not making a public sale this fall he is offering them at private treaty. He also offers some splendid sows bred to these two boars for fall litters and they will be great bargains to any breeders who will buy them. Don't delay ordering one of these at once and we know you will be satisfied. Kindly mention this paper when corresponding with him.

Imported Belgian Stallions and Mares.

R. F. French, Independence, Iowa, a well-known importer and breeder of Belgian horses can supply any of our readers with a high-class stallion or some mares that have lots of size, heavy bone and plenty of quality at a reasonable price. A representative of this paper recently inspected Mr. French's Belgians and were very favorably impressed with the high character of the horses found there. A fine bunch of two and three-year-old stallions are ready for sale. The band of mares and fillies are a fine lot. These mares have the size and quality and are the real draft type. Most of them are safe in foal to the best of imported stallions. Any of these mares or stallions are for sale and at a reasonable price. Mr. French will show at the Iowa State Fair and invites all interested to call at his barns and get acquainted with him and inspect the horses he will have on exhibition. Independence is located on the Decorah branch of the Rock Island and on the main line of the Illinois Central. The farm is one-half mile east of town. See page 20 and write Mr. French for any information you want, kindly mentioning The Homestead.

Chas. H. Murray's Chester Whites.

A gentleman that has made a success of the hog business in a very few years is Chas. H. Murray, Friend, Neb. He pinned his faith to the Chester White and they have surely come through. About four or five years ago Mr. Murray became interested in the white hog. They appealed to him, and he had a couple of the country's best herds close at hand and from these he secured some foundation material. He has at no time made any extravagant purchases and has never tried to sell his stock at more than their worth on a very conservative basis, but good business methods and fair dealing have won him a world of friends and have made him money. Mr. Murray looks forward to the time when better hogs than he owns will not be had anywhere and today he offers a class that will be found profitable and high class. The well-known boar, U. S., is still in service and also Fairmont Chief. These boars are a bit different type, but they mate well on each others get. Mr. Murray has a good bunch of fall boars for sale, and they are big, husky fellows that will go out and sire a lot of pork. They are priced right, and mostly have been immunized against disease. Mr. Murray will also be at the Nebraska State Fair with a good lot of spring pigs and will be pleased to meet all his old friends at that time. Those interested in a good fall or spring boar will do well to write Mr. Murray at once and kindly mention this paper when doing so.

Wyckoff's Poland Chinas.

On October 9th, S. C. Wyckoff, Kellerton, Iowa, will make a public sale of about forty head of his large-type Poland Chinas and he will have a splendid lineup for the breeders. He has 100 head of good spring pigs and these are mostly sired by Kellerton King, a son of the famous Long King, and Good Orange, a son of Big Orange. He also has two good litters by a grandson of Mouw's Big Jumbo. Mr. Wyckoff has been building up a splendid herd of the strictly big-type Polands, and he has today one of the best herds in south central Iowa. He has been buying of the very best breeders and of the strictly large-type strains, and he not only has a well-bred herd, but he also has one of the best herds of big Polands in southern Iowa. He will have a splendid lot of boars in his coming sale as well as some good sows. He is right close to Missouri so that the breeders from that state can easily reach him as well as the people from farther north. He will be pleased to have any of the breeders come and inspect his herd at any time and he always has some good stock to offer them. If you write him a card and mention this paper he will put your name on his list for a catalog and will send the same to you just as soon as it is out of print.

Reese's Prize-Winning Chester Whites.

One of the oldest breeders of Chester Whites in the state, one of the best showmen in this country, and owner of one of the best herds in the land is L. C. Reese, Prescott, Iowa, and if we were to simply judge him and his herd by the winnings he has made, together with the winnings of animals and their descendants bred by him, you will all readily accord to him a place in the front rank of the Chester White breeders in this country. Mr. Reese has not got the number of pigs this year that he generally has, but what he has got are good. He has twenty choice spring boars that are good enough to head good herds and he has a good fall boar and a yearling. All the spring boars are sired by Don Raymore 19139, a first-prize winner at Topeka and Hutchinson. In 1911 he was second-prize boar at Lincoln, being defeated only by the noted boar, Pathfinder. He was also first-prize champion boar at Kansas City and this ought to be sufficient to show his excellence as an individual and his pigs will do the rest for him as a breeder. He has two very choice spring boars by him that are out of Susanna, his champion sow at four states in 1911, and she was in the herd that won first prize over everything in nine states. These boars are strictly choice and the breeder who is wanting a boar to head his herd will find these to be strictly all right. Another good pig is out of Belle Lily and he has others that are out of some of his other good sows. The best fall boar he has is sired by Brewster Boy and out of the old champion sow, Susanna. Mr. Reese will not show this year and he will therefore sell these boars out at private treaty. If you want one of them write him at once and kindly mention The Homestead.

Nelson & Sons' Short-horns and Poland Chinas.

A herd of Short-horn cattle that is among the very best of the state, and a herd of Polands of the same order are the sort kept by S. A. Nelson & Sons, Malcolm, Neb. These gentlemen are becoming well known to readers of The Homestead as they have been persistent advertisers, and they surely have been delivering the goods to The Homestead buyers. These gentlemen constitute one of the strongest firms of pure-bred stockmen within the state, for they are amply able, both financially and otherwise, to take care of a large proposition. They are today farming about two sections of land adjoining the village of Malcolm and they also operate a stock ranch in the middle western part of the state. These gentlemen have spared at no time money or any reasonable pains to secure the very best breeding stock and while at times some stockmen have thought their judgment not the best, yet time has proven that they saw farther than the other fellow, which after all is the determining factor that makes for success in the good stockman. One point that we have in mind in particular was when these gentlemen embarked in the big Polands. The boars that they bought seemed entirely too big to some, but today they are the very sort that people are after. Another time when these gentlemen began buying the best Scotch Short-horns, many said they were too much for those excellent Scotch cows and herd bulls. Time has proven that they were good investments. A significant fact, and one that will interest good stockmen is the matter of a couple of sales from these herds this fall. On November 7th they will sell about fifty-five head of Short-horns and on the next day some forty big Polands. These Short-horns are largely Scotch and of the very best, and the Polands are sure the extra big ones, many being bred by and direct from the Peter Mouw herd and of the best of his big stock. It is unfortunate that no more of the get of A Mastodon and Long King's Model will be in this sale, for these are two of the best breeding boars that the writer has knowledge of. However, as they had but a few old sows and they farrowed at a time when they saved but a small per cent, few of this breeding will be offered. Some excellent Scotch bulls, magnificent individuals and of splendid pedigree will go in this fall sale. They are headers for the real herds. Females the equal of nearly anything to be found will also be included. Keep the sale dates in mind and remember that these sales will be

The Greatest Crimson Wonder Offering of the Season

FROM THE TWO NOTED HERDS OF W. M. SELLS AND SWAN & ELLIS

INDIANOLA, IOWA, AUGUST 6, 1913

SOME WONDERFUL HERD BOARS IN THE SALE

THIS is one of the most attractive Duroc Jersey offerings of the fall season. There will be four fall boars in the sale sired by the grand champion and sire of grand champions, **Crimson Wonder Again,** and two of these will be out of that wonderful brood sow, **H. A.'s Queen.** No better boars for herd boar prospects will be offered in any sale this season. Two outstanding spring boars will be sold sired by the sensational grand champion boar, **I Am A Crimson Wonder 2d,** and there will be **12 sows in the sale bred for fall litter to this noted hog.** There will be 4 boars by **Col. Gano,** one by Wonder's Chief, and one by the Iowa and Nebraska grand champion boar, **Valley King.** One of the Crimson Wonder Again boars is a full brother to the champion boar, **Crimson Wonder 3d.** There will also be 2 good boars by **L. E.'s Col.** There are some outstanding good sows in the sale, among which are 3 fall sows out of H. A.'s Queen and sired by Crimson Wonder Again. There are no better than these anywhere. Then there will be daughters of such noted sires as **Freed's Col., W. L. A.'s Choice Goods, Crimson Wonder Again, Golden Model, Col. Gano, L. E.'s Col., Protection Col., S. J., Buddy K.** and other noted boars. There are some wonderfully high-class herd boars in our sale, and some grand good sows bred to **I Am A Crimson Wonder 2d,** one of the greatest Crimson Wonder show and breeding boars now living. Write for our great catalog and come to the sale. M. T. White will represent The Homestead at the sale and will care for bids sent in his care.

W. M. SELLS or SWAN & ELLIS . . . . . INDIANOLA, IOWA

KRASCHEL, ALLEN AND PUTNAM, Auctioneers

held in Lincoln, the better to accommodate the breeders. They will be glad to have a postal with your address that they may send you a catalog when ready.

Auto Transmission Without Gears.

Gears under the most favorable conditions are somewhat complicated and wear a great deal. The Cartercar Company, Pontiac, Mich., have eliminated this difficulty in their motor cars by using a gearless transmission. More can be learned about the matter by referring to their advertisement on page 7 of this week's issue.

The Perfect Corn Harvester.

The old saying "experience is the best teacher," applies in many cases. There are also many instances where people can profit greatly by the experience of others. To our readers who are interested in a corn harvester we desire to call attention to the letter used in the advertisement of the Love Manufacturing Company, Dept. 15, Lincoln, Ill., which appears in our issue of this week on page 10.

The Neighborhood Baling Press.

In some localities a number of farmers club together and buy a power baling outfit for their own use. Baling hay is becoming more popular every year since it saves a large portion of the crop that is destroyed if the hay is allowed to remain in stack long, and also makes it possible to easily dispose of any surplus. It is very easy for a number of farmers to use the same machine, and in some instances to rent it to their neighbors who are not financially in the deal, thus making the outfit practically self supporting, and the members of the club getting most of their baling done without much cost. More information in regard to the success of this scheme can be learned from the Sandwich Mfg. Co., 170 A. St., Sandwich, Ill., manufacturers of power presses. See page 7.

Satre Chester Whites.

A representative of this paper recently visited the farm of G. O. Satre, Jewell, Iowa, who breeds Chester White hogs and advertises them on page 23. At the present time he wishes to make a quick sale of ten head of excellent fall sows which have been bred for August litters. These are good individuals, with strong, well-arched backs, good feet and early maturing tendencies. They are of good lines of breeding, carrying the blood of Keep On, Lewis R. and others that have been equally prominent in state fair show rings. They have been bred to Iowa Pride 8th, a Hoover-bred hog whose ancestry is equally as popular in all its lines. Mr. Satre has coming one an excellent bunch of spring hogs of which later details will be given in this paper. Do not forget that very low prices will be quoted in the section mentioned above. Address inquiries to G. O. Satre, Jewell, Iowa.

Fred Sexsmith's Polands.

The other day we called upon Fred Sexsmith, Orient, Iowa, and he showed us eighty head of the best pigs that we have ever seen him have on the farm, and you will say he has them when you see him at the Iowa State Fair this fall. Nearly all of these are sired by big Orient, a son of the prize-winning boar, Big Tom, that he is using at the head of his herd. He has five fall boars, four of which are sired by Big Orient and one is by I Am Big Too, the sire of Futurity Jack, the futurity winner at the Nebraska State Fair. This boar, Big Orient, was a winner at Des Moines, and he is certainly siring a good lot of pigs for him. He has a litter over there by him out of a sow called Tekamah, that are some pigs and you will say so when you see them. There are four boars and two sows in this litter and one of the best boar pigs we have got our eye on this season is in this bunch. The dam of these pigs is by Ideal Tecumseh, and he was by old Tecumseh Ideal that made the reputation of the Remington herd. Another splendid litter is out of Sunkist Lady, and she is also a daughter of Ideal Tecumseh. Some splendid boars in this litter. Another good litter is out of Miss Pawnee Nelson, and she is a daughter of old Pawnee Nelson. He has a lot of her good ones and if nothing goes wrong between now and fair time he will have some good things with him at Des Moines. We, therefore, say to our readers to look him up at Des Moines.

Cox & Son's Mule-Foot Hogs.

With this issue of this paper, J. W. Cox & Son, Arapahoe, Neb., the pioneer breeders of mule-foot hogs, start an advertisement in which they offer some very choice young stock. The writer visited this herd earlier in the season and we wish to say that we saw some mighty choice mule-foot hogs, the best in fact that we have ever seen. The sows were great big, roomy, motherly looking matrons, and they had big litters of very fine pigs. These gentlemen have been buying the very best stock that they could find for sale and with good care have improved them somewhat. Great claims are made for this breed by men who have raised them for several years, as to their hardiness. They are good, prolific stock and we believe that those that fancy something of the newer order will find in the mule-foot hogs what they are looking for. They have been immensely popular with all that have tried them of which the writer has come in contact. Parties interested will do extra well to address J. W. Cox & Son, Arapahoe, Neb., at once and mention this paper when writing. See advertisement on page 23.

Adams' Poland China Sale.

C. F. Adams, Owasa, Iowa, will hold a sale of bred sows on August 7th at his farm. Eighteen sows will be sold and for size and smoothness they are a grand lot. Over half of them are by Big Halvor, one of the most noted big-type boars in the country. Not only is he big, but he has been siring a grand lot of big, smooth sows and boars. These sows are bred to Orange Boy by Big Orange, and Sampson by Long King. Mouw's Black Miss sells in the sale and she is a great two-year-old sow by Black Big Bone and out of a Big Jumbo sow. She has three pigs at her side out of a litter of eight sired by the Sensational young boar, Maid's Halvor 1st. Big Wonder is a good two-year-old sow sired by Big Halvor. Long Maid 2d is a grand, good, large sow sired by Coming Wonder and out of the noted sow, Long Maid. Big Maid is a litter sister to the great boar, Maid's Halvor 1st, being sired by Big Halvor and out of Long Maid. She is worthy to be a sister to any great boar as she is big and smooth. It is the opinion of the writer that Mr. Adams is making too much of a sacrific in cataloging so many really top sows in this sale as they would bring twice as much in a winter sale, but his theory is that he is inviting breeders to attend this sale and he is putting in the tops of the herd to attract buyers. Surely any breeder in the land can help the average of his herd by buying one of these good sows. Two herd boars are listed, Grand Chief, a good four-year-old boar sired by Dry Creek Chief and out of a Long Wonder dam. Grand Chief is a sire of good pigs as Mr. Adams can show you on sale day. Fairfellow 2d is a yearling boar by Fairfellow and will do good for someone. Don't miss this sale. Send for catalog mentioning The Homestead. Carlos C. Palmer, will represent The Homestead at this sale.

Hay Presses.

The Auto-Fedan Hay Press Company, Kansas City, Mo., have in their new belt power press a very successful self-feed two-horse-power hay press. Two men can operate it. Anyone who contemplates making a business of hay baling, or who have hay to bale on their own farm should write for full descriptive circular and price list. When writing mention this paper.

Auto Tires.

The National Tire Company, Kansas City, Mo., publishes a price list of automobile tires in their advertisement on page 10. They offer what are known as factory seconds and sell them at greatly reduced prices. This concern is perfectly reliable in every way and worthy of your patronage. They positively do not handle rebuilt tires. All tires are shipped on approval and if for any reason they are not wanted express charges both ways will be paid and the purchase price refunded. A large business has been built up in seconds. They differ from firsts in two ways. They are not guaranteed and they do not cost so much.

Hanna's Short-horn Dispersion.

A study of the catalog for the dispersion sale of D. R. Hanna's Cottage Hill herd of Short-horn cattle at Chicago, Tuesday and Wednesday, July 29th and 30th, reveals a most attractive lot of pedigrees. There are thirteen imported cattle listed, eight females and five bulls, while in the American bred list will be found daughters of Villager, Village Denmark, Village King, Anoka Sultan, Imp. Knuckle Duster, March Knight, Mystic Archer, Cermonious Archer, Merry Robin, Nonpareil Crown, Prince Gloster, Silverdale, Superbus, Maxwalton Sultan, The Conqueror, Avondale, Imp. Silver Mist, Diamond Jubilee, Imp. Blood Royal, Imp. Pennan Commander, Whitehall Count, Royal Sultan, and a host of other good bulls. The list of bulls includes Village Denmark and Villege King, by Imp. Villager; Imp. Champion of Scotland, by Newton Crystal, by Opal Stone; Imp. Corner Stone's Heir, by President of the Mint; Imp. Scotch Mist, by Golden Mascot; Imp. Gold Buckle, by Golden Mascot, and several young bulls by the great Villager. Sixty-six head of this offering were bred on Cottage Hill Farm and represent the best efforts of two decades of breeding. It is a sale that every Short-horn breeder and admirer should attend. It is an absolute dispersion and there will be cattle for every possible want. Breeders, beginners and farmers will each find something they need in this offering. The final announcement appears on page 21. Look it up and arrange to attend this sale. If you have not yet secured a copy of the catalog write for one at once to John Garden, Ravenna, Ohio. mention The Homestead.

Choice Hampshire Swine.

With this issue of this paper, C. S. Bratt, Arapahoe, Neb., is changing his advertisement from Shetland ponies to big Hampshire boars and gilts. Mr. Bratt has several choice ponies still on hand, but he wishes to move some of these excellent Hampshire pigs. Mr. Bratt is one of Nebraska's most progressive stockmen, and is located in that splendid Republican river valley. On this farm he maintains a stud of choice Shire horses and also excellent Shetlands, as well as one of the most famous flocks of Rambouillet sheep in the country, a fine herd of Short-horn cattle and the herd of Hampshire hogs. Mr. Bratt has a good herd of Hampshires and the stock he is now offering is of the right sort. We would suggest that our readers write him immediately for prices on this stock and when doing so, kindly mention this paper. See advertisement on page 24.

A Great Crimson Wonder Offering.

One of the greatest offerings of Duroc Jersey boars and sows that will be sold during the early months of the fall season will be made by W. M. Sells and Swan & Ellis, at Indianola, Iowa, on August 6th. These breeders have joined forces and are putting in the best they have and they are certainly selling something that should be attractive to breeders. They will sell about fifty head, among which will be sixteen boars and among these are some outstanding herd boars. Four of these fall boars are sired by that old grand champion, Crimson Wonder Again, and two of these are out of that sensational brood sow, H. A.'s Queen. We seriously question whether two better boars than these, sired by Crimson Wonder Again, and out of H. A.'s Queen, were ever farrowed and we realize that some great herd boars have come from this mating before. Three litter sisters to these boars also go in and these are simply outstanding and no man will go wrong in buying them, we care not what he has to pay for them. There will be a Crimson Wonder yearling boar in the sale and he is out of Model Queen 4th, a full sister to Model Queen, the grand champion sow that sold in the Putnam sale for $715. Two other excellent Crimson Wonder fall boars are out of Perfection Maid, the dam of the grand champion boar at Idaho State Fair, and she will also be sold bred to the champion boar, I Am A Crimson Wonder 2d. There will be another good fall boar that is sired by the second-prize Iowa State Fair boar, Wonder's Chief, and two splendid spring boars sired by I Am A Crimson Wonder 2d. The latter boar now heads the Swan & Ellis herd, and he is not only a grand champion winner himself, but he is also the sire of a number of first-prize winners at the Nebraska state and other leading fairs. He is one of the best Crimson Wonder boars now living, and his record as a show and a breeding boar now puts him in the front rank and as a special attraction these two firms are selling twelve of their very best sows bred to him for fall litters. The two spring boars that we mentioned above are exceptionally growthy, one a very stretchy, dark, cherry red and either will look good at the head of any herd. There will be a good April boar by old Valley King, four good Col. Gano boars and two by L. E.'s Col. Swan & Ellis are listing eight of their best sows bred to I Am Crimson Wonder 2d, and among these is Perfection Maid 3d, the dam of the Idaho grand champion boar; May Watson, a daughter of old Crimson Wonder Again, others sired by Protection Col., Muncie Prince, Mc's Improver and other well-known sires. Mr. Sells is selling Belle of Boone Again, a daughter of the Iowa State Fair grand champion boar, Freed's Col., also a daughter of W. L. A.'s Choice Goods, Model Chief, Crimson Wonder Again and Model Chief. It is a sale where breeders wanting herd boars or some high class sows will be

The noted Duroc Jersey breeding boar, King The Col., at the head of the O. S. Larson herd, at Logan, Iowa. He is the sire of Col. Sensation and Col. Gano, both 1,000-pound hogs. See Larson field note on page 19.

particularly interested and they will make a mistake if they fail to attend this sale or be represented with a bid. Write either Swan & Ellis or W. M. Sells, Indianola, Iowa, for a catalog and kindly mention The Homestead. Mr. M. T. White will represent The Homestead at the sale and will care for any bids sent in his care. See page 18.

Angus Heifers for Sale.

A. G. Messer, Grundy Center, Iowa, is sold out of Angus bulls, but offers some very fine yearling and two-year-old heifers at reasonable prices. Some of these heifers are safe in calf to a son of the noted sire, Black Woodlawn. Three good January bull calves would be sold. See page 21 and when writing kindly mention The Homestead

The "Ingeco" Kerosene Engine.

The high price of gasoline is increasing materially the cost of operating gasoline engines. The International Gas Engine Company, 152 Helthoff Place, Cudahy, Wis., have an announcement concerning their kerosene engine on page 13 of this week's issue which will be interesting to many of our readers. They claim for it that it will save one-half of the fuel bill over the cost of a gasoline engine.

Gustin's Durocs.

F. Gustin, Elmwood, Neb., owner of one of the good herds of his section of the state, is offering spring boars at private treaty just now. This herd is one that has been built up from good blood lines and the spring boars are the best that we have ever seen on the farm. The spring crop is nearly all sired by a good son of Advancer 5th. They are a very typical lot of Durocs, and we know that good value is being offered from this herd, when individuals and breeding are taken into consideration. The herd sows are strong in the blood of Stewart's great boar, I Am Perf. Wonder, and also Medoc, Golden Model 5th and a few others. These boars may be had at prices that makes them real bargains. Mention The Homestead and address F. Gustin, Elmwood, Neb.

Heisel's Poland Chinas.

J. B. Heisel, Grinnell, Iowa, has for sale two aged sows that are good enough to show at the fairs this fall and they are in good enough condition to show now. One of them is Modesty's Quality by Mastodan Chief, dam by Balanced Jumbo, while the other is a daughter of Chief I. X. L. He also has nine good fall boars by Ex's Wonder, one of the good sons of the noted Big Ex. He has seventy-five spring pigs that are the best he has ever had on the farm. The spring pigs are sired by Ex's Wonder and Iowa Product, a son of Superior Hadley and out of a Big Longfellow sow. The spring pigs are surely a good lot. Mr. Heisel has about twenty sows bred for August and September litters that will be sold worth the money. These sows are the right kind. Mr. Heisel breeds for size, prolificacy, smoothness and heavy bone. If you want something good see page 23 and write him mentioning this paper.

Ott James' Boar Bargains.

Did you order one of those big-type Poland China spring boars from J. O. James, Braddyville, Iowa, yet? If you did not you will have to get busy. He has a few boars by Big Orange and out of Ott's Choice, that are simply corkers at $50, and some that are full brothers to the Story pig, the Tom Walker pig and the Gutshall pig at the same price. The reputation of these boars we just mentioned is enough to make you want one of these boars. We have seen them and they are good and will make most excellent herd boars and you had better get your order to him at once and don't delay the matter. He is also offering to sell six head of two-year-old bred sows for fall litters that are decided bargains. These are bred to his noted boar, Big Orange, and he is also offering five good Big Orange yearlings bred to A Wonder's Giant, and this has always been a great cross. These sows will make 700 to 750-pound sows when matured. Mention The Homestead when you write him about these boars. See page 23.

Trumans' Pioneer Stud Farm.

J. G. Truman, Bushnell, Ill., writes: "Our importation of Shire and Percheron stallions and mares that arrived on June 24th are now in first-class condition, having fully recovered from their long journey. They are certainly an oustanding lot of horses taking them all around, not an ordinary one in the whole shipment. We have recently sold to the Halcott Center Percheron Horse Company, Green county, New York, an imported black Percheron stallion. This company is composed of twelve of the leading farmers and breeders of that county. To our old customer, William Quinn, Sr., Lewis county, Missouri, we have sold two imported Shire stallions. It is over twenty-five years since we sold Mr. Quinn his first stallion. To John A. Thompson, Scotts Bluff county, Nebraska, we have sold an imported Percheron stallion. We had a visit this week from our old friend, Harry Vann, Osage county, Kansas. Mr. Vann is a breeder of pure-bred Shire horses, his home originally being in Rugby, (England) neighborhood. He was looking for a strictly high-class Shire stallion to place at the head of his herd and we had no trouble in suiting him either as to horse or price, he selecting a strictly high-class two-year-old colt. To that enterprising breeder, C. F. Jones, Green county, Iowa, we have sold an outstanding imported Percheron which Mr. Jones expects to exhibit at the Iowa State Fair next month. We are still offering very attractive prices on either Shire or Percheron stallions and mares in order to make room for our regular July importation and shall be very pleased to mail our 1913 catalog to any of your readers requestiong same." Please mention The Homestead when writing these gentlemen.

SALE OF SENSATIONAL BIG-TYPE POLAND CHINA SOWS

TO BE HELD AT THE FARM NEAR

OWASA, IOWA, THURSDAY, AUGUST 7, 1913

ON THE above date I will sell 20 sows, most of them bred, that for size, smoothness and quality will be hard to equal in any sale to be held this year. They are yearlings and two year olds, over half of them by the sensational sire, **Big Halvor**. Big Maid is a mammoth sow, a litter mate to **Maid's Halvor 1st**, one of the best two year olds in the state. Mouw's Block Miss is a great two-year-old sow by Block Big Bone, dam by Big Jumbo. She has 3 pigs out of a litter of 8 by Maid's Halvor 1st that sell with her. Long Maid II and Big Wonder 3d are two extra good sows. The sows are bred to Orange Boy by Big Orange and Sampson by Long King. I am also selling 3 boars. Grand Chief is a great four-year-old boar by Dry Creek Chief. His pigs are right. Fair Fellow 2d is a yearling boar by Fair Fellow. We have the goods and extend a special invitation to breeders to visit us sale day. Write for catalog mentioning The Homestead. Carlos C. Palmer will represent The Homestead.

C. F. ADAMS - - - - **OWASA, IOWA**

Cols. W. B. Duncan and W. H. Cooper, auctioneers.

LARSON'S KING THE COL. SALE

LOGAN, IOWA, AUGUST 7, 1913

40 **HEAD---21 Spring Boars---One 2-Year-Old-Boar by King the Col. and 18 Spring Boars sired by him, 1 by Crimson Wonder 3d, 1 by Golden Model 11th** **40**

KING THE COL. is regarded as one of the greatest Duroc Jersey breeding boars now living. He is the sire of **Col. Gano** and **Colonel Sensation**, both 1,000-lb. boars, and two of the sensational boars now before the public. There will be 10 of my best sows in the sale bred to King the Col. for fall litters. Don't overlook this opportunity to get a King The Col. boar or a sow bred to him. Send for catalog at once and mention The Homestead. Address

O. S. LARSON - - - **LOGAN, IOWA**

N. G. KRASCHEL, Auct. **M. T. WHITE, Field Man for Homestead**

Larson's King The Col. Sale.

On August 7th, at Logan, Iowa, O. S. Larson will make a public sale of forty head of Duroc Jersey boars and sows and it promises to be one of the most attractive of the earlier fall sales of this breed. One of the reasons why the Larson sale is out of the ordinary at this time is because of the fact that he has at the head of his herd that sensational breeding boar, King The Col., possibly one of the most noted sires now living. He is the sire of that celebrated show and breeding boar, Col. Gano, a boar that made such a wonderful reputation last season at all the leading shows, and he is also the sire of Colonel Sensation, the 995-pound boar now in the Ashby herd at Aubudon, Iowa, and regarded as one of the largest Duroc Jersey boars now living. Other sons of King The Col. head good herds and his daughters have been good brood sows and have been much sought after by good breeders. In his forthcoming sale Mr. Larson will sell twenty spring boars (eighteen of these being sired by King The Col.) and one two-year-old boar called King The Col. Jr., also sired by the old hog. There are a splendid lot of spring boars in this sale and many of these are going to make excellent herd boars if properly grown out. The two-year-old boar, King The Col. Jr., is also a good hog and there are a great many breeders who can well afford to go after him. He is a stretchy fellow, with a good head and ear and is a good breeder. You will like him when you see him. He is out of Crimson Lady 2d, and is therefore better than a half brother to Col. Gano. Among the best spring boars listed are three by King The Col., out of Crimson Lady 3d. There are three boars in this litter and they are all good. They were farrowed in February and they are about as closely related to old Col. Gano as you will find them, and they will be large when grown out. Another good litter of four by King The Col., is out of Miss Choice Goods. One of these is an extra choice gilt that should be attractive. A litter of five boars by King The Col., out of a sow called Comet, is rather outstanding for those breeders who are looking for size. Another good litter by the same boar is out of Golden Pet, and she is a daughter of Golden Model 11th. Another good February pig is out of a daughter of Model Advance. These are just a few of the larger and best spring boars he will sell in the sale, and those who are looking for size backed by the very best of breeding should make it a point to attend this sale. There will be a Crimson Wonder 3d boar in the sale and one by Golden Model 11th out of a King The Col. dam. There well be four choice spring gilts in the sale sired by King The Col. He is also selling ten sows in this sale all bred to King The Col. Among these is a daughter of Waveland Col., one by Chief Muncie, one by Graduate Col., another by Col. Willetta, as well as several other good ones. The sow Comet, that is the dam of one of the best litters in the sale, goes in, also Crimson Belle and Orion's Lady, the latter being a litter sister to Crimson Lady 2d. There will also be four fall and spring yearlings and all of these are bred to King The Col. for fall litters. This is a sale where breeders should be particularly interested as there will be a lot of things in this sale that will help make the reputation of their herds. Write for the O. S. Larson catalog at once and kindly mention The Homestead. M. T. White will represent The Homestead at the sale and will look after any bids sent in his care. See advertisement on this page.

The above is a picture of the champion Duroc Jersey boar, I Am Crimson Wonder 2d, at the head of the Swan & Ellis herd at Indianola, Iowa. See field note of the Swan & Ellis sale on page 18.

Youngberg's Chester Whites.

One of the good bunches of Chester white spring pigs that we have seen this summer is owned by Emil Youngberg, Essex, Iowa, and the most of these are sired by Young Keep On, a splendid boar that he has at the head of his herd. He purchased this hog of L. C. Reese, and he is a son of his great show and breeding boar, Keep On. Mr. Youngberg has thirty-one head of boars on hand and he has a lot of good ones. He will be pleased to have Homestead readers come and see him or write him for prices on these boar pigs.

Harvey Moats Dead.

On Saturday, July 12th, at Villisca, Iowa, H. B. Moats, one of the oldest breeders of Poland Chinas in the state, passed away and this adds another to the ranks of the departed ones who have helped make Poland China history. Harvey Boreman Moats was born July 3, 1850, in Ritchie county, West Virginia. At the age of four he removed with his parents to Des Moines county, Iowa, where he grew to manhood. In 1875 he came to Taylor county, locating near Guss, where on March 6, 1878, he was married to Miss Alice Hamell. To this union eight children were born. To this but one of which are still living. Mr. Moats was well and favorably known to Poland China breeders and at one time had one of the best herds in southern Iowa. He formely owned the boar Big Perfection, that was regarded as one of the best breeding boars in the state, and he had a lot to do in bringing the Moats herd into public view. Mr. Moats was a most estimable gentleman, a true Christian and had all the qualities that go to make a patriotic citizen and a good husband and father. He was buried at his old home near Guss, Iowa, on the following Wednesday, surrounded by friends and relatives who knew him so well in life.

Get's All the Cream.

This is what is claimed for the speed governor if used in operating the cream separator, thereby maintaining a uniform speed all the time. It can also be used in the operation of churns, fanning mills, washing machines, etc. We direct the attention of our readers who are interested to the advertisement on page 11 of this week's issue of the Cedar Rapids Foundry & Machine Company, Cedar Rapids, Iowa.

Harvey Johnson Buys Boar.

We are pleased to report the sale of a breeding interest in the great Poland China boar, Chief Price Again, by Harvey Johnson, Logan, Iowa, the same having been secured from Frank Rainier of the same place. Mr. Johnson who has been one of the best breeders of Poland Chinas in the West has had an eye on the uniformity of the get of Chief Price Again for some time, and he thought enough of him that he wanted an interest in the old boar and he finally induced Mr. Ranier to sell him a breeding interest in the old boar. Inasmuch as some of the best boars heading good herds today in the West are sons of this well-known hog it looks like Mr. Johnson has got in on another good one.

Barber's Chester Whites.

That old and reliable breeder of Chester Whites, J. L. Barber, Harlan, Iowa, has 125 head of good spring pigs and he is carrying these along in nice shape for his fall trade. They are sired by High Style, International King and International Boy. These are out of splendid sows, many of which are as good as will be found in the West. He also has thirty-one head of good fall boars and these are sired by Gold Mine and Prosperity. Mr. Barber will sell these fall boars at any time and he has quite a few that are good enough to head good herds. He is also booking orders for spring boars to be shipped the middle of August. Write Mr. Barber about these at once and mention The Homestead.

Morris Fowler's Polands.

A recent letter from Morris Fowler, Arcadia, Neb., states that everything is doing well on the Plainview Stock Farm. Mr. Fowler has one of the real good herds of Poland Chinas of a great hog state. No bad distinction either. His herd foundation has been well selected, his stock of good blood lines as well as good individuals and in his hands they have had the care of an expert feeder and stockman, hence good hogs are on his farm. One of the best lots of stuff that we saw a year ago were on this farm, and his crop this season is as good, we think. The most of the spring pigs are by Tom Sampson by Shattuck's great boar, Sampson, and his dam was the great Anna Belle by Bell Metal. A show boar is on the farm having been purchased this year. He is Big Commander and comes from the Lingford herd and will be good competition in the junior yearling class at the state fair this fall. This Lingford stock is the sort that sure wins. The Fowler sow herd would do a good stockman good to look at, as they have been carefully selected from five or six of the best Nebraska herds and they are the real, big, smooth ones. Mr. Fowler has spring boars for sale. Real big ones from this excellent breeding and we would like for you

to write him. Mention The Homestead when doing so.

Ready-Made Corn Cribs.

The Miller Manufacturing Company, 8000 Alabama Ave., St. Louis, Mo., advertise their section corn cribs on page 13 of this week's issue. These cribs are built in sections four feet long by eight feet wide by ten feet high so that a crib of any length can be constructed of them. More complete information can be found by referring to the advertisement.

Seed Correctly Planted.

Poor stands, small grain, are often due to poor planting. Every seed should be sown at the proper depth so that no stalk will come up prematurely or not at all, which happens if seed is too deep. Grain grades best when all the heads ripen at the same time. This only happens when all the stalks come up uniformly. Our readers who are interested in correctly planted grain should read the advertisement of the Peoria Drill & Seeder Co., 2435 North Perry St., Peoria, Ill., which appears on page 12 of this week's issue.

Evolution of Rubber Tires.

In the nineties the idea of applying rubber tires to buggies was first conceived. The first rubber-tired vehicle was tried out in Detroit, and like the first bicycle, created considerable interest, also comment and criticism. Like most all innovations, the carriage tire was considered a fad. However, it has grown remarkably until at the present time it is a staple article. The demand for carriage tires is increasing each year, which is proven not only by the number of tires manufactured, but also by statistics from the buggy and carriage manufacturers. It is claimed that approximately one-half of the vehicles having rubber tires are equipped with Goodyear carriage tires whose popular brand is the solid Wing Carriage Tire. This will be found in the advertisement of the Goodyear Tire & Rubber Co., Akron, Ohio, on page 6 in this week's issue.

Frazer Bros' Polands.

A recent letter from Frazer Bros., Waco, Neb., states that everything is coming in good shape at their farms. They report some extra good, big pigs by Big Jumbo and out of a daughter of the 1,050-pound Long Chief. This sow is one of the largest in the West today and is a record producer. Orient, a yearling boar, purchased of Walker & Son last season is siring good stuff and will have some produce at the fair this fall. Two litters of pigs by Columbus are doing fine, and look as though there should be some good breeding stock among them. They are keeping a lot of Orient sows or rather gilts, and for that reason the boar will be for sale. They have bred a number of sows to him for fall litters and this will make them an abundance of this breeding. This boar's get may be seen at the fair, and probably the boar also. If interested in an extra good yearling boar proposition see this boar. Should you write mention The Homestead.

Holly Dunn's Polands.

On October 3d, H. F. Dunn, Clarinda, Iowa, expects to make a public sale of Poland Chinas and he will sell about fifty head. This herd has come into public notice largely through the splendid boar that now heads his herd, and this is no less than Big Jumbo, Jr. 62433. He is a son of Mouw's Big Jumbo and his dam is Lady Wonder 11th by Big Hadley's Model, and his grandam is the 900-pound sow, Lady Wonder 6th, that was formerly owned by O. N. Remington, Tekamah, Neb. This sow was unquestionably one of the greatest big-type brood sows that has been seen in the West in these many years and her descendants have been sought after by the best breeders both East and West. This boar is somewhat lame at the present time, having injured his toe and the hoof came off, but he is doing well now and Mr. Dunn expects to pull him through all right. He weighed 1,000 pounds just before he got hurt and Mr. Dunn has been offered some long prices for him. He is a hog that has a wonderful lot of finish for a hog of his size, and is a well-balanced boar for a hog of his proportions. He has fifty good spring pigs by him, and among these are some splendid boars. He has a lot of good fall sows sired by him and he will sell some of these in his fall sale. We will have more to say of his offering later in the season.

Iams' New Importation.

In a recent letter from Frank Iams, St. Paul, Neb, he says: "My business was good the past year and I only have some of my best show stallions and Paris winners left. You can tell your readers that my 1913 importation will arrive in December and the best that money and thirty-one years' experience will buy will be in this bunch of horses. I expect to bring over with me the best stallions that will be bought in Europe this summer and I will have with me some of the best mares that I can get over there. I have sold some grand good horses the past season and every man that came to my place was well pleased with their purchases. Thirty-one years of square dealing has convinced the buying public that Iams not only has the goods, but he delivers them for less money than they can be bought for elsewhere, and as they keep a coming and want the horses I presume the only thing I can do is to bring them over. You will therefore hear from Iams again the coming season with the best bunch of stallions and mares that he can buy in Europe."

"RANGER" BICYCLES

Have *imported roller chains, sprockets* and *pedals; New Departure Coaster-Brakes* and *Hubs; Puncture Proof Tires; highest grade equipment* and many advanced features possessed by no other wheels. *Guaranteed for 5 years.*

FACTORY PRICES direct to you are less than others ask for cheap wheels. Other reliable models from $12 up. A few good second-hand machines $3 to $8.

10 DAYS' FREE TRIAL We ship on approval, *freight prepaid*, anywhere in U. S. *without a cent in advance.* DO NOT BUY a bicycle or a pair of tires from *anyone at any price* until you get our big new catalog and *special prices* and *a marvelous new offer.* A postal brings everything. *Write it now.*

TIRES Coaster-Brake Rear Wheels, lamps, parts and sundries *half usual prices.* Rider Agents everywhere are coining money selling our bicycles, tires and sundries. Write today.

THE LIVE STOCK MARKET.

Union Stock Yards, Chicago, Ill., July 19.—Cattle, barring prime grades and live mutton values are closing the current week on a lower basis than one week ago, while hogs have hit the highest altitudes touched since early in March last and good light and butcher weight hogs are scheduled to do more awaiting.

Save for stereotyped and unnecessary erraticness of the live mutton trade, no branch of the market is in need of an apologist. Beef steers selling now below the 8½c line are irregularly 15 to 25c lower than a week ago as are most grades of butcher she stock, but a study of supply figures and of character of the offering reveals a reason. Considering the size of the marketing the trade has by no means performed badly after a fashion that should discourage owners of qualified half-fat classes from holding their stock for a respective finish.

Chicago cattle receipts for the week show an increase of 15,000 head over the week previous and the six market supply on aggregate increase of approximately 40,000, a big gain in receipts being shown at Kansas City and St. Louis whose hoppers have been full of Southwestern grass stuff running in seasonable fashion from Oklahoma and Texas and from dry sections of Kansas. Nothing from the Northwestern range has as yet put in an appearance, but a train from the Standing Rock reservation is due to arrive next week and will furnish a tryout. Advices from the Northwest indicate that beef gathering will be late, as range cattle went into the grazing season poor, feed is abundant and owners have confidence in the later fall market which was a humdinger last year.

Not to exceed 25 per cent of this week's cattle supply has been well finished, yet less than 15 per cent has been of stocked or feeder class, and as it has been a steer run locally, it has hung up considerably beef. The stillery-fed delegation has been conspicuous and most of the sloppers have made $8.40 to $8.70. The $8.75 to $9.15 grade of choice to prime heavy corn-fed steers have sold steady as have yearlings good enough to pass $8.50 and prime babies have reached $9.00. The run has carried a raft of $8.00 to $8.50 steers at $7.85 to $8.75, a decent sprinkling of inferior and plain light killers at $7.10 to $7.75. The spread in prices between quality and inferiority is narrow and as grassers are running freely it is logical to expect the price range to widen, although old-time summer and fall spreads when she stock was plentiful and the range delegation large are not considered possible. The crops of Northwestern grass beef to show up at Chicago and Omaha this year is expected to show a decrease of 40 to 50 per cent from last year.

Largely increased runs of quarantine cattle at Southwestern markets are chiefly responsible for the declines noted from last week's good market on she stock below choice class. Supply of native cows and heifers has been small. Up to Wednesday noon the butcher market was fully as high as at last week's best time, but the pace could not be maintaining in the face of continued declines in low-grade and medium priced steers that were induced chiefly by competition from the Southwestern delegation at Missouri river markets. Finished yearling heifers as well as like grades of steers, have been prime favorites and hold firm, but half-fat kinds are involved in the declines, as are all fat cows below prime dry-fed class as well as canner and cutter stuff, though canners are not more than 10 to 15c lower. Prime-fed yearling heifers have touched $8.60 to $8.75, many sales of fed heifer yearling have been made within a range of from $7.85 to $8.35 and little heifer stuff fit for slaughter has sold under $6.50, although a scrubby dairy-bred sort of little runts ranged down to $5.50. A few prime-fed beef cows reached $7.75 to $8.00, bulk of good to choice butcher cows sold at $6.25 to $7.15 and a common to fairly good class of grass cows sold at $5.15 to $6.10, canners and cutters ranging from $3.40 to $5.10, bulk at $4.25 to $5.00. Bulls have sold well, closing 15 to 25c higher than a week ago. Bolongnas are making $6.00 to $6.80, bulk $6.25 to $6.65; bulk of the fat bulls selling at $6.85 to $7.40 and prime to fancy $7.50 to $8.00; very few higher than $7.60. Inferior to good canner bulls going at $5.00 to $5.75. Calves are higher than at anytime since last March, bulk of the vealers making $10.75 to $11.15, prime selected bunches $11.25 to $11.35. This market looks top heavy, but the trade is forcing a long period of light calf receipts and veal will be vended on a high level market for months ahead.

This has been the third successive week of a very narrow volume of trade in stock and feeding cattle. The corn belt is busy harvesting hay and small grain crops and inclined to defer its purchase of thin young cattle and material to fill its feed lots until another day. Meanwhile good pasturage conditions, bright future fat cattle markets prospects and the fact that the growing cron has been coming on in great shape have prompted holders of stock and feeding cattle to market them sparingly. Prices are close to steady with a week ago, a trifle lower if anything. That there will be a deficient supply of feeders in the range cattle run this summer and fall is certain and a serious shortage in the supply of stockers and feeders, as measured by demand, if the corn crop turns out as well as conditions now indicate, is expected to develop a few weeks later on. Nothing of decent quality in a 900-pound feeder class is selling now below $7.15 to $7.25 and only plain qualified stock steers below $6.85. Most of the fair to very good feeders are selling at $7.35 to $7.65, a choice fleshly kind being nominally quoted to $7.90, while best selected feeder steer yearlings reach $7.75 and bulk of the medium to very good stockers go at $6.90 to $7.50. Stock and feeding heifers are going largely at $6.00 to $6.60 and stock and feeding cows mostly from $5.00 to $5.75.

Hog trade continues to do all the most optimistic in the market predicted for it. Those who staked their reputation and money on the appearance of the 10 center before September 1st have their judgment yet to be vindicated, but at the rate the market has been going this week the arrival of the 10c hog will be chronicled much before that time. The market had a little set back on Monday of this week on a local run of over 50,000 head, but has been on short rations and climbing ever since, hitting Friday the highest average price basis touched since June, 1910, a general average of $9.30 and an extreme top of $9.60 being made in the Friday session. As compared with a week ago the bulk which sold Friday on a $9.15 to $9.45 basis was 30 to 40c higher. Since the low spot of the current year, which was early in January, the market has advanced over $2.00 per hundredweight. Eastern shipping demand is coming strong, quality is falling as the proportion of grassy sow stuff swells and the range in prices is rapidly widening. A decent heavy packing class is selling in small lots down to $8.80 to $9.00, but very little in car-load lots below $9.15 and selected light shippers in the upper registers $9.55 to $9.60. Some reaction is logically expected early next week, but the future market taken in a broad sense, looks bright. It is a case of deficient supply and steadily increasing consumption, both domestic and foreign. Provision stocks are accumulating, but every pound of product packers are able to put away at this juncture will be needed later, as the merchandising season is ahead and its necessities are recognized. Since January 1st eleven leading hog markets have received an aggregate of only 13,780,000 hogs, against 15,056,000 the same period last year

Live mutton values advanced 25 to 50c within two days this week and declined 50c to $1.00 in a general way within the three succeeding sessions, the widest fluctuations being on lambs which closed 50 to 65c lower than a week ago, while aged muttons and yearlings are largely 25c down, with a 50c break on heavy sheep. If there was ever a market which needed the services of a genius, capable of devising some method of regulating marketing of live muttons during the seasons when southern and native stock run freely, the ovine market of the past six weeks has been it. The main source of trouble has come through the hap-hazzard manner in which this season's generous run of southern lambs has been put up to the killer in a great gob one week and in homeopathic doses the next. A veritable flood of southern lambs have been dumped into the market hopper this week. Prospects for the coming week are that the run of native and southern stock will be shut off, but a material increase in the range movement is cited, and recovery of declines enforced this week can only come through a sharp reduction in supplies of southerners and natives. At this week end limit on native lambs is $7.75 and the bulk of the fair to good killers go at $7.25 to $7.65. Handy-fat ewes are selling at $4.50 to $4.75; heavy and mixed weights at $4.00 to $4.25. From now on range stock will be strongly in the lime light. First Montana wethers of the season got in late this week, a choice, handy class with a long breaker end that sold at $5.25. Plain heavy California wethers sold during the week at $4.25 to $4.65. There is already hungry demand for feeding lambs around a 6½c basis, but few available as yet. Plain Washington feeding yearlings went out at $4.50 and yearling breeding ewes in the same shipment at $5.25. There is fair call for fair to good native breeding ewes at $4.00 to $5.00 for decent to choice.

TOO LATE TO CLASSIFY.

Imported Belgian Horses

I HAVE on hand a large collection of imported Belgian stallions and mares that have size, heavy bone and quality. Some extra good two and three-year-old stallions and a grand bunch of mares and fillies. Mares are all in foal to imported stallions. I will show at the **Iowa State Fair** and want to meet all interested in good Belgians. See my exhibit. I will be pleased to meet you. Farm one-half mile from town,

R. F. FRENCH - - INDEPENDENCE, BUCHANAN CO., IOWA

Located on the Rock Island and Illinois Central railroads.

OVERGRAZED RANGES COME BACK.

The improved condition of the national forest range after regulated grazing is pointed to by experts of the department of agriculture as a demonstration that areas which have been severely damaged through overstocking by sheep and cattle can be brought back to their former carrying power through a system of sufficiently intelligent use.

When the government took charge of the live stock ranges within the national forests some of them were so badly overgrazed and otherwise injured from reckless handling of the stock that their grazing value appeared to have been almost entirely destroyed. Many of these ranges, however, have been restored and made as valuable as ever. On several of the forests results have more than justified the expectations and the range is in better condition than it ever was.

An example of this improvement is cited in the Nebo national forest, Utah. In 1908, when that forest was created, the ranges within the forest boundaries were found to be badly overgrazed and trampled because there was a lack of any control or supervision over the areas. One of the areas was at that time estimated to be capable of carrying only 3,000 head of cattle. Now, through conservative management and judicious distribution of the cattle over the ranges, and improvements of water conditions, the carrying capacity of the range has been increased until, in the present grazing season, nearly 8,000 head of cattle are using this particular area, and forest officers feel that a few hundred more can be safely grazed there without injury.

Ask your neighboor to subscribe for The Homestead.

Mr. Short-horn Buyer, Attention!

DO not overlook the dispersion sale of D. R. Hanna's Cottage Hill herd at Chicago, Illinois, Tuesday and Wednesday of next week, July 29 and 30, 1913. There are 125 head cataloged for this sale, every one with a strong Scotch pedigree. Fourteen bulls are listed, 5 of them imported. Seven sons of the great Villager are cataloged, including the sensational Village Denmark and Village King. There are a number of high-class imported cows in the sale that will add strength to any herd. Sixty-six head of the offering were bred on Cottage Hill Farm, and are the get of imported Villager, Village Denmark, Village King, Royal Diamond, Merry Robin, imported Silver Mist, Misses Diamond, Spicy Diamond, Anoka Sultan, Diamond's Victor and others, while the balance of the offering is sired by some of the greatest bulls known to the Short-horn breed. Every female of breeding age is bred to either imported Villager or his sons, Village Denmark and Village King. It is an absolute dispersion and everything will be sold. No Short-horn admirer can afford to miss this sale, as there will be cattle to fill every want. Write for catalog, mentioning Homestead, to

Iowa State Fair and Exposition, Aug. 20th-28th

Some of the Farm Teams in the Exhibit at the Iowa State Fair Last Year.

Premiums $76,000 Race Purses $15,700 Exhibits 800 Car Loads

Bigger, better, more complete than ever. The largest premium offering in the history of the fair is calling forth more and better exhibits.

Most famous breeding districts of the world are searched by Iowa State Fair exhibitors for their best animals. All of the most successful live stock breeders show at the fair.

Greatest live stock exhibition in the world at the Iowa State Fair. The annual exhibition of live stock is estimated to be worth $2,000,000.

Most popular race meet in the middle West. Purses for the races this year total $15,700, the largest sum ever offered for the state fair race program, the first of the big fall race meets.

An ideal outing and summer school. Better than any short course. Object lessons in the most successful methods of agriculture and live stock breeding.

Ideas gained can be cashed into dollars. The wide-awake visitor gets new ideas which he can later turn to most profitable account. Lectures, demonstrations, something of profit for every member of the whole family.

Sixty acres in farm machinery. The only way the farmer can keep in touch with the wonderful advancement in machinery, so vital to the conduct of his business is to attend the fair.

A complete exhibition full of inspiration, recreation, instruction. A special program every day. Unusual opportunities for education and amusement.

"Old Mexico," big night show, spectacular and thrilling. Horse show five nights at the pavilion. Thrilling specialty acts. High hurdling horses. Four bands of music. Great fireworks display.

COOPER'S SPECIAL 30-DAY BOAR SALE

WE have over **100 head of boar pigs of spring farrow.** We have 25 sows to begin to farrow in 2 weeks. We must have room for them. Hence, for 30 days we are going to sell these boars at prices they will bring on the market next fall, and they will be worth $40 to $100 each as breeders at that time. They are all immunized. We guarantee safe delivery and record them at

25 DOLLARS EACH

They are sired by Big Expansion (the 800-lb. son of the noted Dorr's Expansion), Big Bone 2nd (weighing 900 actual pounds, a son of Big Bone), Chief Leader (weighing over 500 lbs. at 14 months old), and Ideal Chief, and other noted boars. **The dams are sows weighing from 500-lb. yearlings up to sows of over 800 lbs.** If you are in the market for the biggest blood lines, from big sires and dams, send your check, tell us the kind of pig you want and we will send him or return your money. You will not buy such boars, such breeding, at the price again this year. Buy your boar now and save 20 to 50 dollars on him.

W. H. COOPER - - - - - - - - - HEDRICK, IOWA.

BIG BONE 2d 161497

J. O. JAMES' SENSATIONAL PIG BARGAINS

I WILL book orders up to 100 head of spring pigs sired by my half-ton, **Big Orange, Ott's Big Orange,** who weighed 700 pounds on the scales just turned 19 months, **Big Sensation, Big Orange's King, A Wonder Giant** and **Gritters' Best.** All strictly big-type boars and out of extra big, long, heavy-boned matchless sows, many of them weighing from 700 to 800 pounds. These sows averaged 9½ pigs to the sow, many of them 10 to 13 pigs. I want you to write, describing just what you want. It makes it easier to pick the pig that will suit. I am pricing these pigs low for quick sale for July and August delivery, or for orders booked during July, or while they last. Must be bought during this month to get special price on them. Many of these pigs will be worth $100 to $150 by October. You can save from $75 to $100 by buying now. The early buyer catches the bargains. The dams of these pigs are sired by Big Orange, Big Sensation, Pawnee Nelson, Long King's Equal, Big Ex and Longfellow Jr. You can't beat sires, dams, pigs or prices. We guarantee our pigs to be as represented. Let me hear from you at once as orders are coming fast. Mention Homestead when writing. **J. O. James, Braddyville, Iowa.**

Faulkner's Famous Spotted Polands

"Are Leaders of Their Kind."

150 May and June pigs now ready to ship. The special price of $35 single, either sex; $65 pair, no akin; or $90 trio, no akin, will sell them all in the next thirty days. Start right with the kind of our forefathers. Mail your check with first letter. Everything registered.

HOMER L. FAULKNER - Owner Highview Breeding Farm - JAMESPORT, MO.

LAWSON'S SENSATIONAL BIG POLAND CHINA BARGAINS

THE home of the noted breeding boar, **Long King's Equal** (weight 965 lbs. in breeding condition, weighed in the presence of forty breeders). Sows bred to him and **A Wonder's Jumbo** for fall litters. **150 Choice Spring Pigs** that I am now offering at private treaty. Will not hold fall sale and will sell these out privately at less than half the money they would bring in a sale. Now is the time to get your bargain while the good ones are here. Write me at once for description and prices and mention Homestead.

JOHN B. LAWSON - - - - CLARINDA, IOWA

AUGUST GORDER'S POLAND CHINAS

Looking Backward

The following is a sample of thousands of letters received by us during the year. We are proud of them all. Read this one and you will see why our customers have faith and confidence in their dealings with us. Here is the letter:

"May I extend the greetings of the season? I have been with you since 1878. Thirty-four years I have patronized your house. As a boy I sent you small orders. It would be intetesting to look over all the orders I have mailed to you. Boyish things, the trimmings of a young man, my wife's engagement ring, the furnishings of a little home, the toys and playthings for babies and children, boys' and girls' books, tools, farm implements, groceries, drugs, clothing. A few years ago my home was destroyed by fire. The new one was equipped from your great store. The enclosed order is for a few presents for some of my children. If I had not received good treatment at your hands would I have remained so long a customer?"

(Name and address furnished on application.)

Looking Forward

Whatever we have done in the past for our customer is only a foretaste of future service. The best evidence of this will be found in our new catalogue of 1000 pages.

This immense volume is filled from cover to cover with over a hundred thousand real bargains—bargains in foods, bargains in furniture, clothing, drugs, farm implements—every requirement of man, woman or child.

The Iowa Homestead

DES MOINES, IOWA, THURSDAY, AUGUST 7, 1913.

The Lesson Of The Walnut Trees

Possibilities of Profit and Beauty Overlooked by All Too Many Farmers—The Story of How a Walnut Grove Grew and Yielded Good Returns—By Isaac Motes.

LAST autumn I spent several weeks on the old homestead where I grew up, and among the many things I had impressed upon my mind was the value and the possibilities of a grove of nut trees.

When I was a very small boy an older brother planted about a dozen walnuts one spring in the corners of the yard fence, close to the chicken house, where the soil was rich. Some of them never sprouted, or died after coming up, but six grew and thrived, and became fine, graceful young trees. Still, I do not think anyone attached much importance to the six young trees. They were planted as a sort of whim, and were allowed to grow simply because they were in the fence corners, out of the way. So as I grew to manhood the walnut trees grew also. They were rather late about beginning to bear, for if I remember correctly it was twelve or fourteen years before they began to bear, and then in scant quantity.

When I became of age I got away from home, out into the world, hustling for myself, and didn't have many opportunities to note the growth and the bearing qualities of the six walnut trees. My parents had put the farm into the hands of an older brother and moved to town, so my visits thereafter were short, and generally at a time when the bearing qualities of the trees didn't show up to good advantage—usually at Christmas time, after the walnuts had been gathered and parceled out among the families of several of my brothers. I saw, however, that the trees were fine looking, well proportioned and still growing in height and spreading out.

But last November I was back on the old homestead for some weeks. All the leaves had just fallen off the walnut trees, and most of the walnuts were lying on the ground under the trees, turning from yellow to black, and never did I see such piles of big golden nuts. Some of the trees were fully three feet through, the tops symmetrical, well proportioned and very tall for black walnut trees—much larger than any walnut trees I had ever seen growing wild in the woods. The space under each tree was piled nearly two feet thick with walnuts, fully a car load from those six trees, it seemed to me, and my brother told me they had fifteen or twenty bushels still on hand from the previous season.

I could not help thinking that it would have been almost as easy to plant an acre of the young walnut trees as that half dozen, and if one acre why not ten, twenty, or a hundred? And if walnuts, why not soft-shelled pecans, or alternating rows of walnuts and pecans? Had such a grove been set out at the time those six walnut trees were planted, that land would now be worth $1,000 an acre, and the trees would yield a princely income for generations.

So I do not think the average farmer realizes the possibilities in a grove of nut trees. In clearing up new ground where a number of nut trees occur in a cluster, whether walnuts, hickory, pecans or chestnuts, they should be allowed to stand, even if they mar, to some extent, the symmetry of the field. A grove of forty or fifty fine walnut, hickory or pecan trees covering an acre of ground will be worth more to a farmer than that acre in corn or wheat. And the beauty, luxuriance and fruitfulness of the trees will be greatly increased by a little cultivation, even if it be nothing more than digging up the ground a little around each tree with a pick. A dozen or so small holes four or five inches deep, dug under each tree will catch and retain a great deal of moisture, for trees in the woods must suffer for moisture during dry summers, when the ground is so hard that most of the rain that falls runs off quickly, before it has time to be absorbed. Do this in the spring and summer, and you will notice a marked difference in the luxuriance of your trees. Considering how hard the ground is in the woods, it is surprising that trees grow so luxuriantly as they do, and were it not that their leaves absorb so much moisture from the air a great many more of them would doubtless die.

Another means of stimulating the growth of trees is to keep the dead leaves on the ground in summer. By this means the ground is screened from the heat, and the moisture doesn't dry out. If it is necessary at nut-gathering time to rake the leaves from under the trees, in order to get all the nuts, they should be raked back afterwards, or if small limbs of trees or bushes be placed under the trees this will catch the leaves as they are blown about by the winter wind. In the absence of leaves some worthless straw placed under each tree will answer the same purpose.

Also it should be remembered that a grove will do better if all the trees are about the same height. Then all will get their share of the sun's rays. Start a grove of trees of the same height and they will remain of uniform height, because they all have an equal chance at the light and heat from the sun, which will attract and draw them upward, and it will be a race, as it were, between the trees to see which can grow the tallest and straightest.

If your natural grove contains trees of widely different heights it will pay you to cut down any large, tall tree which is shading numbers of young, graceful trees near it. When you get your trees down to a uniform height they will all get into the sunlight and all grow tall, straight, long bodied and graceful. The small trees may be helped to grow by digging around them thoroughly, enabling the ground to catch and hold more moisture.

Remember that hickory trees vary greatly in the quality of the nuts they bear. Some are much better than others; larger, thinner shelled, more oily, and with larger chambers in which the kernels grow thick and round, making it almost as easy to extract the kernels as walnuts or pecans. Some of the large hickory nuts, grown in this section, are better than the small shagbarks, because larger, and because the chambers inside the nuts are very roomy, and the kernels thicker and easier to extract. By testing the nuts from each tree you will know which grow the best ones, and those which grow the poorer qualities can be marked for cutting down, to be sawed into timbers and sold to makers of different kinds of handles for tools, and to other manufacturers. Open spaces in your grove can be replanted with the best grade of nuts, and in time you will have a body of timber beautiful and ornamental, as well as a source of large income, both from the timber and the nuts marketed.

But, of course, black walnuts are better than hickory nuts, and the wood is also more valuable, so if you have some old, badly run down and impoverished field,

FROM THE HOME GROVE, FOR THE ENJOYMENT OF THE WHOLE FAMILY.

(Continued on page 5.)

THE HOMESTEAD

A PRACTICAL JOURNAL for the FARMER, STOCKMAN, FRUIT GROWER, POULTRYMAN, GARDENER, and HOUSEKEEPER

BY JAMES M. PIERCE

In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address all letters to

THE HOMESTEAD COMPANY,
Des Moines, Iowa.

COME TO THE IOWA STATE FAIR.

The fifty-ninth Iowa State Fair opens at Des Moines, Wednesday, August 20th, and closes Thursday, August 28th. Prospective patrons will do well to note that the fair opens a day earlier this year than usual. Those who have been in the habit of coming to Des Moines Sunday or Monday, to spend the entire week will do well to come this year on Wednesday or Thursday, as otherwise they will miss half the fair, the dismantling and shipping of exhibits to Hamline and elsewhere taking place on Thursday of the second week this year, instead of two days later (Saturday) as heretofore.

The Iowa Homestead wishes to urge upon all Iowa farmers the great advisability of attending this year's fair and coming early. There is every prospect of a bountiful crop. Money is plentiful in Iowa, notwithstanding the stringency elsewhere. Iowa farmers have worked hard, they are entitled to a rest. Every member of the farm household will profit by a fair. Des Moines is in better condition to handle the crowds this year than ever before.

The Iowa State Fair is an institution of learning, the same as the state college of agriculture or the state university. Money spent in attending it brings its returns just as surely, and often more quickly, than money spent in sending the farm boy or girl to college. In addition to all the educational features the state fair offers that innocent pleasure and amusement without which farm life is apt to become monotonous and irksome to young and old.

The Homestead takes this occasion to extend its annual invitation to all patrons and friends to make their headquarters at the down-town publishing plant or the fair ground pavilion. The Homestead's building is located on Locust street, only two blocks from the postoffice and on the direct route to the state house. It is at the disposal of all our friends and readers, to be used as a meeting place or for any other purpose desired. Since the last state fair the Homestead building has been visited by a disastrous fire. The plant is now entirely rebuilt and equipped with the latest and finest machinery. Our friends are cordially invited to inspect the plant and see the wheels in motion turning out more than a million farm papers every month of the year. The Homestead's pavilion on the fair grounds is on the main thoroughfare, adjacent to the grand stand, to the stock pavilion and to the chief exposition buildings. Parcels, wraps and lunch boxes may be checked there, without a cent of cost; free ice water is always available and a courteous Homestead attendant is always on hand ready to serve the needs of visitors. Nothing will give the Homestead and all its working force greater pleasure than to have Iowa farmers make themselves at home in the Homestead publishing plant or pavilion.

The 1913 Iowa State Fair promises to be bigger and better than ever before. We therefore urge upon every Iowa farmer that he attend, that he come early, that he stay late and that he bring every member of the farm household with him. State fair comes only once a year. It is a treat to which every member of the family is entitled. Money spent for railroad fare and necessary expenses is well invested, the fair having an educational value, in addition to furnishing much needed amusement for every member of the farm household.

SUMMER FOODS.

Nothing is more important, in hot weather, than the food question. With the doctor many miles distant and not available under a couple of hours or more at best, wisdom and prudence dictate caution. Foods which may be eaten with impunity at other seasons of the year are apt to disarrange the human system when the temperature is hovering around the century mark.

The question of the water supply is of prime importance. Once that is settled the food question comes next. Typhoid germs lurk in the drinking water. The oft repeated advice to boil the water is heard so frequently that it sometimes loses its force by reiteration. The advice should be heeded, however. All too many farms are dependent upon wells which drain foul surface water. To be on the safe side, destroy the germs by boiling the water. It may save a large doctor's bill and even the life of some loved one.

There are certain fruits which play an important part in the summertime in maintaining bodily health. We are indebted to a book entitled "Health and Business" for the following information on fruits as a summer food:

Fruits are valuable adjuncts to the daily menu, especially when cooked. Of raw fruits, oranges, grapes, bananas, melons and lemons are the best. Raw apples are very well digested by some folks, but by others are quite the reverse. The old proverb, that "an apple is gold when eaten in the morning, silver in the afternoon, and lead at night," has more than a modicum of truth in it; but a baked apple is one of the most convenient and effective laxatives we know.

Rhubarb has a peculiar effect on the stomachs of some people, causing indigestion and a violent eruption of nettle rash to result. It also seems to provoke an attack of rheumatism in persons subject to that complaint; it contains a powerful acid which probably produces this effect, but to those fortunates who feel no ill effect after taking rhubarb it is a useful spring medicine as well as a palatable dish.

Many of the most familiar fruits and vegetables have distinct medicinal values. The proper attention to the things eaten, therefore, will make them serve both the purposes of food and medicine. The following are some of the articles of diet which are known to have medicinal qualities:

Apples, carrots and Brazil nuts are excellent for sufferers from constipation.

Asparagus stimulates the kidneys.

Bananas are beneficial to sufferers from chest complaints.

Beets are fattening and good for people who want to put on flesh. So are potatoes.

Celery and onions are nerve tonics.

Cranberries are a stringent and correct the liver when it is suffering from inaction caused by overeating.

Dates are nourishing and also prevent constipation.

Grape juice is a laxative, but the skin and seeds are likely to cause constipation.

Honey is a good substitute for cod liver oil.

Lemon juice is excellent as a gargle for sore throat.

Lettuce has a soothing effect on the nerves and is excellent for sufferers from insomnia.

Onions are conducive to sleep. They quiet the nerves and are good for colds.

Parsnips, like sarsaparilla, are good for the blood and to tone up the system.

Tomatoes are good for a torpid liver, but they should be avoided by gouty people.

Water cress is an excellent blood purifier.

There is more danger these hot days of overeating than of not getting sufficient nourishment. The loss of a few pounds in weight in the summer time is far preferable to the danger of contracting a disease through eating foods which are unseasonable, which are too rich for the summer condition of the blood or which are absolute poison to the human body in its summer condition.

WHY WINTER WHEAT SHOULD BE DRILLED IN.

Winter wheat is rapidly increasing in popularity and growing in the esteem of corn-belt farmers. The crop in most sections has escaped winter killing during the last two years and those who have used proper methods of preparing the soil and sensible methods of seeding find that it is possibly one of the most profitable cereals that can be grown. We believe that the area seeded this fall will exceed in acreage the 1913 crop.

The old-time winter wheat grower needs no instructions about the importance of seeding the crop with a drill, rather than to sow it broadcast. While it may be difficult to offer a satisfactory explanation as to why drilled wheat stands the winter better than wheat sown broadcast, yet in a general way it must be due to two or three factors. In the first place, drilled seed is uniformly covered and this in turn means that the crop develops a uniform root system. In the second place the leaves from drilled wheat make their appearance below the surface level. In other words they grow in little trenches, is it were, and the ridges between the wheat rows seem to afford a form of protection that is invaluable. Possibly the greatest benefit that comes from having the plant develop in depressions rather than on the level is due to the fact that when freezing and thawing take place in the late winter or early spring the soil tends to fall down into the depressions and to keep the heaved rootlets well imbedded. In the case of broadcast grain it is not uncommon to find the crop entirely heaved out largely as the result of the freezing and thawing process and to be thrown high and dry on the surface. This seldom takes place with drilled grain unless the soil is unduly wet.

The value of the drill is sometimes questioned when used for spring seeding purposes but no man who has had practical experience in the sowing of winter wheat would risk losing the value of his time and labor as well as the price of his seed by sowing on the old-fashioned broadcast plan.

LOWER EXPRESS RATES.

The order of the Interstate Commerce Commission materially reducing express rates is a big victory for the farmer and stockman who sends his produce to market by express. The victory is probably greater for the Iowa hogman than the Iowa grain farmer, because of more frequent express shipments. It is the first gun in a big campaign, however, to make the express companies reduce all their rates and give the shipper the concessions which he has long been denied.

The order of the commission causes the new rates to go into effect October 15th. The extent of the reductions ordered will be seen from the following typical examples: A five-pound package from Chicago to Des Moines by express, under the old rate, cost 50 cents; under the new rate it will be only 28 cents, but one cent more than by parcel post. A ten-pound package from Chicago to Des Moines by express, under the old rate, was sixty cents; under the new rate it will be only thirty-six cents, which is sixteen cents less than by parcel post. The hundred-pound rate from Chicago to Atlanta, Georgia, has been $3.75; it is reduced to $2.60. The hundred-pound rate from Chicago to Pittsburgh has been $2.00; it is reduced to $1.70. The hundred-pound rate from Chicago to Spokane, Washington, has been $10.00; it is reduced to $7.95. And so on throughout the entire list, the commission inaugurating a series of zones for express somewhat similar to those in effect for the parcel post.

The Iowa farmer who has a hog to ship to market will find himself saved a lot by the new rates. The Iowa farmer who ships small produce to the nearby town or even the faraway city will find himself able to make this shipment much cheaper. The new rate will mean much to the farmer and will help cut down the cost of living for the city man.

ADVICE ON FILLING THE SILO.

Thousands of our readers will in a few weeks face the task of silo filling. Where there is good equipment at hand it is not an ordeal to be dreaded though those who must fill their silo for the first time face the situation with some degree of trepidation. They have yet to work out the details of their task and acquire by practical experience information and knowledge that at the present time is only a matter of theory.

In order to help those who are inexperienced, as well as to give aid even to the old timer in the business, we propose to inaugurate a contest among those who have first-hand information on the subject. We will give a $10 cash prize to the individual who sends in the best contribution dealing with the details of silo filling. A $5.00 cash prize will be given for the second best contribution and all those whose articles are used will be appropriately awarded.

It is actual experience that we desire. Simply give in detail the plan that you have followed in filling your own silo. For instance, do you cut the corn crop by hand or with the binder? Is the crop cut a day or two in advance of putting it in the silo or is it your practice to use the absolutely green corn? How many men are required to keep an ensilage cutter in operation constantly and how are these men distributed at the various tasks? Do you tramp the ensilage and if so how many men do you keep at that work? If water is used in wetting the ensilage give your plan of applying it.

These are a few of the items that should be taken up by those who prepare contributions, but there are many small details in addition that are of vital interest and importance to those of our readers who own silos.

We are going to suggest that this matter be attended to at once because the dry weather has greatly hastened the maturity of the corn in some localities and the silo filling season will be on before we are aware of it.

NO IOWA FAIR RATES.

Iowa railroads have been successful in their fight to set aside the law passed by the last legislature ordering reduced rates for the Iowa State Fair. As the result of the decision of the federal court, handed down in Council Bluffs last Saturday, the rates to Des Moines for this year's fair will be the straight two cents a mile for the round trip, the same as they were in 1912. The Iowa law compelled the roads to grant a reduced rate of one cent and a half a mile for the round trip, but the railroad lawyers argued that this was discriminatory, inasmuch as it singled out the fair as the only recipient of the favor. The railroads are far from showing that farsighted policy which is necessary to popularize them with the general traveling and shipping public and upon which ultimate success depends. Secretary Corey fears that the court's decision will cut down the attendance 25,000. Even with the 1912 rates in effect, however, the 1913 fair is going to be so much bigger and better than ever that we urge all our friends and patrons to attend.

THE COUNTRY CHURCH.

The country church continues to come in for widespread discussion. Country life conferences find it their most fruitful subject, for it is coming to be generally realized that the rural church is one of the biggest factors in the permanent improvement of living conditions. Surveys have been taken which prove that poor soil invariably means poorly attended country churches, while good farm neighborhoods almost invariably mean large, flourishing, well-attended and active churches.

The literature of the country church is becoming more and more extensive. For instance, the Country Life conference held for two weeks in July, at the Iowa State College of Agriculture, discussed the church and its relation to farm prosperity from every angle and viewpoint. The discussion will be published in book form and given wide circulation. A strong and vital book on the subject has been issued by Charles Otis Gill and Gifford Pinchot. Theodore Roosevelt reviews this book at length in a recent issue of the The Outlook and helps along in the campaign to make the church still more effective in raising the standards of rural life.

The remedies suggested by Doctor Gill and Mr. Pinchot for the run-down church, which has outlived its usefulness, are five in number.

First: The improvement of country life generally. The authors rightly point out that "the country church cannot hope for prosperity apart from the improvement of country life. Whatever tends to produce a lower standard of living in the country necessarily and immediately affects the country church. If there were no other and weightier reasons, as a mere matter of self-preservation the church could not afford to hold itself aloof from the struggle to secure the conditions of successful life upon the land. It cannot hold itself free from responsibility for the continuance of bad economic conditions and expect to thrive in the midst of them."

Second: The adoption of a program of social service for the churches, not, as Colonel Roosevelt points out in his article, "the abandonment of the spiritual efforts in which they are now engaged, but the addition thereto of a definite effort to help the community."

Third: Church co-operation. Not necessarily church merger, but a joining of hands in mutual endeavor for the general good. As the authors of the book under consideration well say:

> There is but one solution for the problem of overchurching which seems to offer reasonable hope in the two counties concerned. This lies along the line, not of doctrinal union, but of common effort in the cause of the common welfare. Where people work together for a better community, they are the more likely to work together for a better church. Divisions in the churches may often be bridged over by setting the members of hostile groups working together for the common good.

Fourth: A country minister in touch with the vital interests of the country people. Once more we quote from the writing of Dr. Gill and Mr. Pinchot:

> The country ministry in these two counties is weak because it has little to do with the vital needs of the people. As a rule it is out of touch with the essential problems which control the welfare not only of country life, but of the church itself. The essential fact is that the minister is often aloof from the real concerns of the people. Too often he has no intelligent appreciation of whole fields of human interests that are rightly of prime importance to his parishioners. The country minister needs special training for work in the country.

Fifth: Country-wide and then state-wide organized among the churches for the promotion of the general social welfare. The day has passed when each church, like each individual, can go its separate way without heeding or considering any other, taking help or loaning a helping hand, for the general good. Organization will result in a compact, forceful body which can hardly fail to accomplish big results.

The more this question of the country church and its increased usefulness is studied the bigger it appears and the greater loom the possibilities. Every article written on the subject means a quickening of interest somewhere, while the helpful suggestions given by such men as Doctor Gill, Colonel Roosevelt and Mr. Pinchot can hardly fail to go a long ways toward making the church take on new life and become more and more a factor in the general uplift and the individual prosperity.

THE LESSON OF THE WALNUT TREES.

(Continued from page 3.)

or some corner of a field containing an acre or more, you cannot find a better way to improve it than by setting it out in a selected quality of walnuts, especially if you have some trees already growing there. It is remarkable what run-down old fields will grow fine walnut trees, and with no cultivation, for the roots strike deep into the earth and draw fertility and nourishment from soils and clays which the roots of cultivated crops never reach.

An acre of ground should support 150 or 200 walnut trees if they are all about the same size. And it should be remembered that the quality of walnuts from different trees also vary, so if you have trees already growing you should carefully test the nuts from each tree and plant only those of the best quality and any tree that bears a poor quality of nuts should be cut down and sold to some company making gun stocks or fine furniture, and young trees of better quality planted in its place. Walnut or hickory wood being so heavy, it requires but a few trees to make a car load.

Nuts for planting, whether walnuts, hickory nuts or pecans, should be of the new crop, should be kept in a cool, moist atmosphere during the winter, or laid on the ground under a thick, covering of leaves or straw, and planted in the spring. A nut which has been kept in the house for a year or so, and become very dry and oily, can scarcely ever be made to sprout.

Each week adds a number to the water-hauling list. Some are now having to haul for every purpose, house use as well as for stock. This adds greatly to the regular work, in fact on some farms it requires almost the entire time of a man and team. Water hauling is the doing of something for nothing.

Some folks think the country school is better and some not as good as it was twenty-five years ago. A good teacher is born, not made by grilling study. One must have natural talent for the work, and those who have are teaching as good schools as were taught twenty-five years ago, if not better.

Ask your neighbor to subscribe for The Homestead.

Rural Life Conference

By Carl N. Kennedy.

THE rural life conference held recently at the Iowa Agricultural College was one of unusual merit, if judged from the enthusiasm aroused. There was not a minister or layman that attended but what went home with the spirit of "do something" for his church and his community. Every man present pledged himself to do some special task for the betterment of his rural community during the following year. "I'm going to preach for better country schools," said one rural minister. "I'm going to promote better agriculture in one part of my parish," said another. "I'm going to try to set up better standards of living in my neighborhood," declared another.

Nearly eighty were enrolled in this year's conference of which sixty were ministers. As these men undertake to fulfil the pledge that they made they will be working sincerely for the rural betterment in some fifty or sixty different communities. Most of these are in Iowa, but some are from other states. This is a decided gain in attendance over former years. The first conference, two years ago, brought together a handful of men for only two days. Last year's conference lasted a week and the attendance was still small. One of the notable facts was that several denominations, notably the Presbyterian and the Congregational gave aid to their ministers to attend.

Numerous speakers appeared to discuss rural questions, but the most important work was carried on by Rev. Clair S. Adams, of Illinois, leader, and Dr. T. N. Carver, of Harvard University, lecturer on rural economics.

From Mr. Adams the conference got the lesson that the work of the church must not be kept within four walls, but extended outward in every direction to touch the whole life of the people. "We had it hammered into us that it is our job to save the whole community and not merely the souls of a few individuals in it," declared one minister. The spirit that Mr. Adams tried to impress upon the ministers was the fact that to do a great amount of good in a country parish, the minister must "stick on the job." His lectures for the two weeks were full of ideas gleaned from practical knowledge of just how to work out some of the different problems that confront every country church.

Dr. Carver gave splendid lectures that rural ministers and others need to think about in regard to the economic and social problems of rural communities. He impressed them deeply with the conviction that "The solution of the rural problem lies with the rural minister who is helping the rural people to form their likes and dislikes." Dr. Carver does not believe in intensive farming such as is practiced in many parts of Europe. "A large product per acre means a small product per man. A lower product per man means a lower standard of living. We may have to learn how to economize land in this country, but it must be done so that labor is not cheapened. The American has solved the problem of the economy of labor by the use of labor-saving devices better than any farmer on the face of the earth and he will solve the problem of high-priced lands. Let us avoid as a plague any wholesale importation of foreign labor for this means a reduction in the amount of agricultural product per man.

In the resolutions of the ministers, adopted on adjournment, they declared that they had been brought into a new understanding of the rural problem and the importance of the church in solving it. They acknowledged a new inspiration for their work and expressed a new understanding of its great importance and dignity.

Premium Seed Wheat

FIRST at Iowa State Fair last year from a field that made 54 bu. per acre and with a 44 bu. yield this year, this strain of Turkey Red stands alone. Recleaned seed in bags f. o. b. Ames at $1.25 per bu. while it lasts. Send check or draft with order. Reference any bank in Ames.

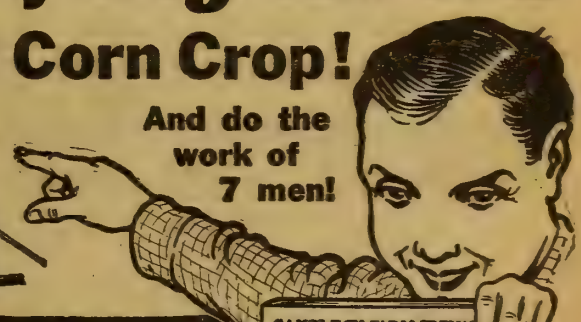
Now any *Boy* can Crib Your Corn Crop!

And do the work of 7 men!



Sandwich Eternal Cypress Farm Elevator Rids Farm Life of Drudgery

Gone are the days when farmers looked forward to corn husking with **dread**—days when they hunted high and low for **help**—days of **back-breaking labor** shoveling corn into cribs—nights of soreness and pain. How **hard** to get men—how **costly** too! And how they grumbled at **scooping**—how they ate up the **profits** and wore out the women folks keeping them fed.

All This Changed by the Sandwich

A few years ago people would have scoffed at the idea that one boy could crib as much as 7 men.

But nowadays near 15,000 progressive corn raisers own Sandwich Farm Elevators and prove it! See this—

"My 11-year old boy runs my Sandwich Elevator as well as I can," writes John F. Heiken, Palmyra, Ill. "My children husk nearly all my corn."

Pays Its Way—Works Like Lightning!

The Sandwich comes with Swivel Spout or overhead roof conveyor. And it puts your corn—your small grain—into the farthermost corners—lickety split!

"Unloaded 50 bu. in 4 minutes," writes I. E. Orendorf, Heyworth, Ill. Others crib 40 bu. in 2½ minutes, dead easy.

C. H. Keller of Marshall, Minn. writes:—"**Had my crop picked 1c a bu. less on account of my Elevator.**" Yes, huskers work **cheaper** where the Sandwich does the cribbing.

No Leg Breaking Platform

The Sandwich Wagon-Jack is overhead. "Works to perfection," says A. J. Anderson, Boone, Iowa. You drive right under—with even the **tallest** load. And it dumps it in the hopper in a jiffy. Then hitch on **any power**—horse or engine—and your corn pours into the crib like magic.

Cypress Body Outlasts Steel!

We make less money using the Cypress, "The Wood Eternal," but we make more **friends** and more **sales**. This is why it is called the **Everlasting** Sandwich and is fast crowding cheap pine, poplar and all-steel Elevators from the market.

Warning—60 Carloads Oversold

Late orders for sixty carloads of Elevators we could not supply last fall. They came from farmers who **waited**. They had to shovel. But they couldn't blame **us**. For we warned **them** early as we are **warning you now**. Few dealers ever order **enough** ahead to supply you all. You'll have to do **your own** ordering and do it **now**.

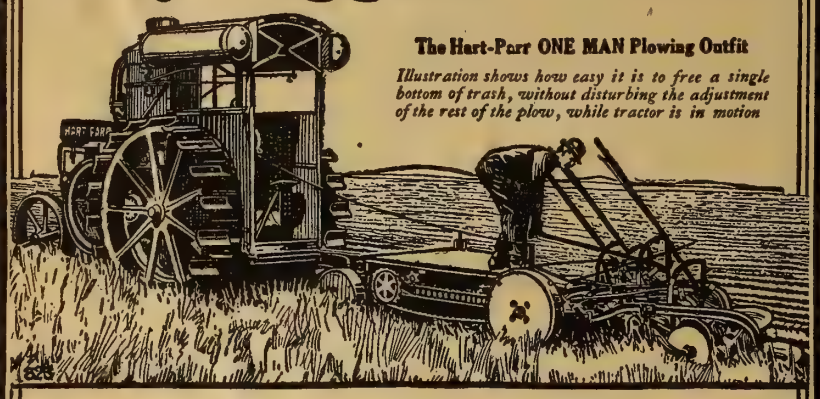
Get This Free Book—See the Sandwich Too!

Write us today for our brand new Elevator Catalog and the name of our nearest dealer who'll show you the Sandwich Elevator.

This book pictures the Sandwich Elevator and tells all about it. It gives you the inside facts on Elevator Construction, the things to beware of—the points to insist on. And it gives you the measurements of Cribs and Graneries—you'll want these if you ever build. Address without fail

SANDWICH MFG. CO., 170 B St., Sandwich, Ill. Makers of Everlasting Sandwich Corn Shellers, Hay Presses, Loaders and Rakes, and Feed Mills and Gasoline Engines.

Make Every Acre Pay Biggest Profits



The Hart-Parr ONE MAN Plowing Outfit

Illustration shows how easy it is to free a single bottom of trash, without disturbing the adjustment of the rest of the plow, while tractor is in motion

Deep, Early Fall Plowing

is the foundation of an ideal, mellow seed bed—one that is best for seed germination and growth. But early fall plowing that is deep enough to secure best results would ruin the sturdiest horses and prove a costly operation. Instead of risking your horses, do your fall plowing with a

HART-PARR -OIL TRACTOR-

and save time, labor and money. The small light tractor and "Self-Lift" plow shown in the illustration make an **Ideal One-Man Outfit** for farms of 100 to 320 acres. You operate both tractor and plow right from the engine platform. Easily plow 10 to 15 acres daily—6 to 8 inches deep—the work of 12 good horses. Work the outfit 24 hours daily, if necessary. It never tires or gets overheated.

Superior and Original Features of Design Found Only in the small, light Hart-Parr Tractor and Self Lift Plow.

Tractor—Lightest weight, yet great strength. Only 300 parts—others have 800 to 1500. Main frame is a strong, one-piece casting. Drive wheels with wonderful wave form lugs, are solid steel castings—not built up or pieced. Driver lugs give 31 percent greater surface contact than any other. Can be equipt with Hart-Parr "Hold Fast" extension lugs, the lugs with a bull dog grip in soft soil. Especially designed carburetor operates efficiently on cheapest **kerosene.**

Plow—33⅓ percent lighter than any other and has one-third less parts. Combined automatic and hand lift. To raise or lower bottoms, merely pull a rope attached to clutch lever. Any one bottom may be raised with hand lift attachment without disturbing adjustment of rest of plow. Spring beam coupler enables plows to skid around or over obstructions and prevents breakage.

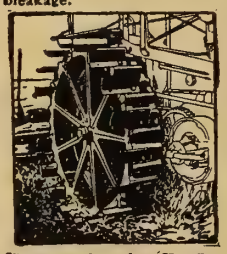


Illustration shows how Hart-Parr "Hold Fast" lugs grip the ground and pull out straight away without tearing up the soil.

Fall Plowing Means Bigger Profits

With this outfit, you can follow up harvesting and threshing without delay and kill injurious weeds, insects, grubs and bugs before they do any damage. You can turn up new plant life, conserve the rainfall and distribute your farm labor more evenly over entire year. When spring comes, your rush work is a simple task instead of a heavy round of hard work. Your plowing is done—you need only disc and seed and do it with this same tractor. And no matter how wet or backward the season, with your plowing out of the way, you can get your seed in several weeks earlier and give it a better start.

Power for All Farm Work

And remember—this Hart-Parr Tractor is more than a one purpose outfit. In addition to plowing, use it for discing, seeding, harrowing, harvesting, threshing and hauling; fill silos, shell corn, in fact, do all your traction and belt work with it.

We build a size for every farm, large or small. We can meet your power requirements.

Write today for catalog, special circulars and expert information on power farming costs.

HART-PARR COMPANY

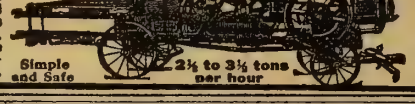
Sandwich (Chain Drive) Hay Press
Supplies Its Own Power

You too, can make $200 to $300 clear profit monthly! Farmers pay liberally to have their hay baled by this solid steel, big tonnage Sandwich that doesn't break down in the middle of a job—that turns out clean, slick, solid bales, rain or shine, one and two a minute.

It has hopper cooled Gas Engine mounted on same truck, 4, 6, 8 or 10-horse power—gear driven magneto—the most complete outfit in existence. The Sandwich beats all ordinary presses 2 to 8 tons daily in every working test. **25 tons are its every day job—often 30 to 40.** Full power delivered to Press by heavy **steel roller chain.** It does away with slipping, stretching belts. Simple time-tried self-feeder—**with big feed opening.**



Yes, the safest, surest, biggest money maker in the business! ***THIS FREE BOOK,*** "Tons Tell," the surprising story of tremendous profits scores are making with the Sandwich. Write us today for your copy by return mail. Ask for our special terms that let you start with little money and pay from your profits. Address:

The PERFECT CORN HARVESTER
SOLD DIRECT TO THE FARMERS

$18.00---Freight Prepaid

Send for Booklet and circulars telling all about this labor saving machine.

The Cheapest and Easiest way Possible to Cut your Corn for Shock or Silo.

Oregon, Ill., Oct. 26, 1912.

Gentlemen—After giving the Perfect Corn Harvester a thorough working test in all conditions of corn in the cornfield, we write you that it has adjustment for a great variety of conditions in cutting high, medium or low. We are very much pleased at its light draft and steadiness in following the center of the row. We consider it the very best one-horse corn cutter that the experimental station has ever had an opportunity to demonstrate, and we commend it to the corn cutting farmer.

Very truly, Samuel Ray.

LOVE MANUFACTURING COMPANY - - DEPT. 4, LINCOLN, ILL.

FARM FURROWS

Now is the time to investigate the merits of deep and shallow cultivation of corn. Take a hoe and dig for moisture in fields worked both shallow and deep. See where you find the most.

Short pastures put more pressure on the fences alongside of cornfields. I want the best fence along cornfields, for there is where the tests are made. It's a good idea to look after them occasionally.

A man is safer to carry insurance. Whenever I have considerable grain or hay on hand I have it insured, then if lightning strikes or fire starts in any other way I know the loss will not fall on me.

The time when grading roads should be done will soon be here for this year. After the first of September any amount of fresh dirt thrown together hasn't time to settle sufficiently before freezing weather, so there is "softness" all winter.

A good many of the bread bakers think new wheat flour is not as good for bread as the old, consequently there is a demand for all the old wheat flour at this season of the year—a fine idea from the miller's standpoint and it gives him a chance to work off his old stock of flour.

Folks are finding that there is no cause for hurry about filling a silo, and that filling it at the rate of a few tons each day makes just as good silage as to make shorter work of the filling. You can take your own time to it if you want to.

A friend of mine who owns an engine-plowing outfit thinks he could do better work and do it easier if he had gangs of disk instead of moldboard plows. He says when it is dry enough for the engine it is dry enough so disk plows pull much easier and pulverize the soil better.

With a good crew, the modern baler makes fast work of putting hay in the bale, and where a man owns his own baler I am not sure but what it is the most economical way of taking care of hay, as it can be quickly handled, requires small space for storage, and in case there is a surplus, it is instantly ready for the market.

Raising or lowering the draft on a collar often relieves a sore that is starting to form on a horse's shoulder. If everyone should see this and keep the hames snug tight on the collar there would be less shoulder trouble.

Mail carriers are getting autos in which to carry the mail. Of course, there will be many days in the course of the year when autos cannot be used, but right now, with the thermometer close around the 100 mark and the road is hot and dusty, the auto is certainly a great saving on horseflesh.

When the cultivators are put away don't forget to grease the shovels. This will save a lot of time next spring, when time is worth more to you than the few minutes it will take now to smear grease on the shovels.

When we start fall plowing we begin the making of our next year's crop. Let us see that the plow is sharp and bright and that each furrow is as near perfect as we can make it.

Hens that must fight mites day and night are too busy to pick up feed and lay eggs. It is no pleasant task to go into a mite-infested hen house and fight them, but it is more unpleasant to get along without hens and "hen fruit."

Kerosene seems to be taking the place of gasoline for furnishing power for small farm engines. Will this lower the price of gasoline or will it raise the price of kerosene? Time will tell.

It is generally a mistake to discard old machinery and buy new before the old is worn out, but with the manure spreader the temptation is great when we think of that extra foot that we must lift for every forkful of manure.

All Types From 11-2 to 60 H.P.

"INGECO" Engines

A BIG MONEY SAVER

An engine that you can bet your last dollar on to work right in all kinds of weather—a fuel saver — an easy starter — a steady worker.

The "INGECO" is just that kind of an engine and besides its reliability it has a record for keeping out of the repair shop—it is a marvel of simplicity—there is nothing to get out of order. Once set it runs constantly without trouble.

KEROSENE ENGINES

Find out about "INGECO" Kerosene, Oil and Distillate Engines before you make another move on the engine question—you'll be ahead in money and satisfaction.

CURRENT EVENTS

CONGRESS continues to mark time on tariff legislation. Little or no headway has been made for the past week, with the result that whether one favors the Underwood-Simmons bill or not there is a general inclination to get the matter settled and over with, so that business may know what to expect and what conditions to meet. Congress has now been in session for almost four months, while the senate has had the tariff bill before it for fully two months. Nothing is being done except the delivery of opposition speeches, by republican senators, to empty benches. It is almost a foregone conclusion that no amendments of importance will be adopted and that the bill will go through the senate as agreed upon by the finance committee and will then be worked over by a joint conference of democrats from the two houses. Senator Kenyon, of Iowa, voiced the feeling of a great many people when he declared, during the past week, that the country, as well as the senate itself is getting tired of the tariff debate, inasmuch as no new facts are being brought out and no striking speeches are being made, such as were heard when the progressive republicans were opposing the Payne-Aldrich bill a few years ago. The democrats were elected on a platform of tariff revision and the country is prepared for the anticipated change, fully as much now as it will be after a few weeks more of futile speeches delivered in congress mainly for the purpose of getting campaign documents printed at public expense for individual use.

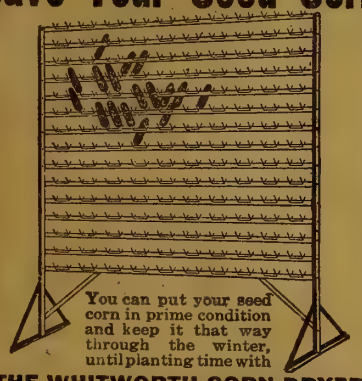
EXCESSIVELY hot weather has been general throughout the greater part of the grain belt the past week, the thermometer registering above the century mark several days in succession, throughout Iowa, Nebraska, Kansas and Illinois. The 110 degree mark, official, was reached in Nebraska and Kansas, while a score of grain-belt towns reported 100 degrees or above. While the grain belt was thus sweltering, the District of Columbia was visited by a devastating wind and hail storm, which caused the loss of several lives and hundreds of thousands of dollars worth of property. The White House lawn was ruined and scores of streets, which had been lined with stately elms and fine shade trees, were littered with debris within a few minutes. One of the unusual feats of the wind was to whip a package containing 1,000 one-dollar bills through the window of the government printing office and scatter the money far and wide. vigorous search failing to return almost a hundred of the lost bills. A hail storm in Minnesota, in the Red River valley, caused considerable damage so that the weather has been an important factor in the week's progress in practically all parts of the country.

MEXICAN conditions seem to be going from bad to worse. During the past week an immigration official of the United States, crossing the border in the legal pursuit of his duties, was fired upon by Mexican soldiers and only escaped assassination by fleeing at top speed. President Wilson immediately demanded the arrest and trial of the guilty soldiers and the Huerta government acceded to the demand. In the meantime Ambassador Henry Lane Wilson was summoned from Mexico to Washington to give first-hand account of conditions in the southern republic. He spent the greater part of the past week in conference with President Wilson and Secretary of State Bryan. Ambassador Wilson is strongly in favor of the United States recognizing the Huerta government, but President Wilson is opposed to this, mainly because Huerta came into office through the assassination of the legally elected president, Madero, the people having no voice whatever in seating Huerta. Mexican finances are in a precarious condition, it being said that French investors have lost $250,000,000 in Mexican securities in recent months. Two revolutions are in progress and the country is torn asunder with factional fighting and economic and financial troubles. As a compromise it has been suggested that Huerta resign and permit a provisional president, acceptable to all factions and to the United States, to rule until a new president can be chosen at a regular election. It is extremely doubtful if he is patriotic enough to take such a course. The United States will maintain the Monroe doctrine and refuse to let Europe intervene. Unless better conditions come soon, however, the situation will be so critical that American intervention, or mediation at least, can hardly be avoided.

Whether to haul the manure and spread on the plowed fields or spread it on the stubble and plow it under is a question that is still being discussed. If in doubt, try both ways, but don't let the discussion of this or any other question interfere with the work of getting the manure hauled to the field and spread. A manure pile is a nuisance as long as it is a manure pile.

A few years ago three barbed wires was considered a pretty good fence. Now it takes three wires and woven wire in addition. Woven-wire fencing is a long step toward better farming and fewer neighborhood quarrels.

Save Your Seed Corn



You can put your seed corn in prime condition and keep it that way through the winter, until planting time with

THE WHITWORTH CORN DRYER

Dries every kernel thoroughly; no moulding. Will hold 600 ears, each one separately and rigidly in its place. You see them all at a glance. Rack is 6 feet high, 5 feet wide. Frame of heavy steel bars; pins heavy galvanized steel wire.

Price only $6.75—We have a special Combination Offer that will interest you. Write us about it.

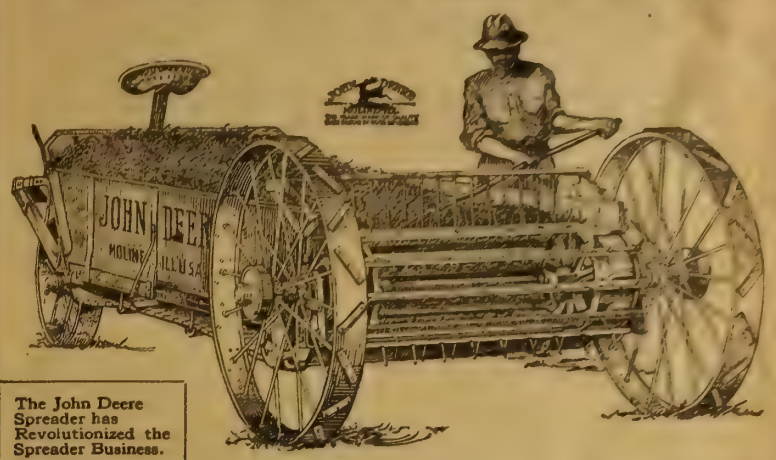
John Deere Spreader

The Spreader with the Beater on the Axle



The John Deere Spreader has Revolutionized the Spreader Business.

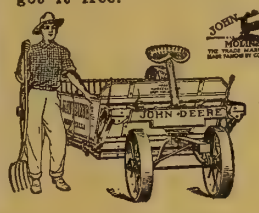
Here are Some of the Reasons:

BEATER and all its driving parts are mounted on the rear axle. Power to drive it is taken from the rear axle through simple gears like those that have been used on horse-powers for many years. This construction is patented. You cannot get it on any other spreader.

ONLY HIP-HIGH, easy to load. The top of the box is only as high as your hips. Each forkful of manure is placed just where it is needed. You can always see into the spreader.

FEW PARTS. Clutches, chains and adjustments—in fact, some two hundred parts in all—are entirely done away with. To throw the machine into operation, move the lever at the driver's right back until the finger engages a large stop at the rear of the machine.

ROLLER BEARINGS together with the simplicity of the machine itself, make the John Deere Spreader light draft. There are many more reasons that have helped to make the demand for John Deere Spreaders greater than all those interested in the spreader business thought possible. These features are fully discussed in our spreader book. You can get it free.



The Low Down Spreader with the Big Drive Wheels

What You Want

Here's your chance to get exactly what you want in a manure spreader.

One that is easy to load, light for your horses free from constant repairing, and one that will last as long as you think it ought to.

What You Get

With a John Deere you get a low-down spreader in which the advantage of big drive wheels is not sacrificed for the low down feature.

You get a spreader that is easy for your horses because it has these big drive wheels, together with roller bearings, few parts, the center of the load comparatively near the horses and evenly distributed over all four wheels.

No clutches to get out of order, no chains to give trouble, no adjustments necessary.

Built with steel frame, securely braced, like modern railway bridges—strong and durable.

Why You Get These Things

Mounting the beater on the axle makes all these things possible in the John Deere Spreader.

It does away with some two hundred trouble-giving parts. It makes the spreader low down. It permits the use of big drive wheels. It does away with clutches, chains and adjustments. It puts all the strain and stress of spreading on the rear axle, where it belongs, not on the sides and frame of the spreader.

It does a lot of other good things, too. They are fully illustrated and described in our new spreader book.

Get this Spreader Book

It tells how the John Deere Spreader is made and why it is made that way. It contains illustrations of the working parts and colored pictures of the John Deere Spreader in the field. It also has valuable information in regard to storing, handling and applying manure to the land.

Get one of these books free, by asking us for our spreader book, Y 27

Starves Rats Saves Grain

Saves more than its cost every season. Costs but a trifle more than wood, outlasts a wooden granary 3 to 1. This portable, rust-proof metal granary is a proven success.

2 GRAIN BINS IN 1

Can be partitioned to store 2 or more kinds of grain at once. The Northfield combines all the good features found in other makes and has several new features.

Insures Your Valuable Grain against fire, dampness, rats, thieves, etc. It will dry out and preserve your grain better than the best wooden bin. Is ventilated through floor and sides, under eaves and by great big cupola. Holds flax or any small grain and is easily converted into a thoroughly ventilated corn crib. Has anchor bolts that make it wind proof. Only bin with a perfectly smooth rain proof floor. Side and floor sections connected by interlocking cleats. Stronger than bolts. Easiest and quickest to set up. Sections all interchangeable. The heaviest bin of its size. Built to stand rough usage. Most reasonable in price compared to its weight. Thousands are in use.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

HEAVES.

I have a mare six years old that got in the drill about three months ago and ate a lot of dusty oats from the box that stayed in the drill, and she got a bad cough. We feed her stock food and it doesn't seem to help her. She is getting so she can scarcely breathe. Please tell me what I can give her to stop the cough.

We suspect that the mare is badly affected with the heaves and should not be worked at present. Turn her out on good grass and let her live on that without other feed. Night and morning give her half an ounce of Fowler's solution of arsenic. As soon as she is relieved she may be lightly worked, but not soon after a meal. When she works again do not feed any bulky feed at noon and continue to feed green grass and add whole oats and wheat bran. In winter time feed wetted oat straw in preference to hay. Silage and roots may also be fed, in addition to grain. Confirmed heaves is incurable. Gradually discontinue the medicine as the aggravated symptoms abate.

BRAIN DISEASE.

I have a bull three years old that has been acting very queerly for the last two weeks and appears to be very sick and getting worse every day. When I first noticed him he was running along the pasture fence all around the pasture and always around the same way and would not eat any grass. I put him in a box stall in the barn and he continually goes around to the left almost all day and has been eating or drinking scarcely anything. He is so weak and poor now he can hardly stand up. His back seems to be getting a curve on it to the right. I had our veterinarian examine him and he decided that he must have gotten a mild stroke of lightning. If this is the case do you think I can recover any damage from the insurance company? Is there anything I can do for him?

It seems evident that there is a clot of blood, or collection of serum or puss in the brain and that is affecting the spinal column and causing the abnormal movements described. This might come from a blow, lightning stroke, or some disease, such as tuberculosis, but it would be impossible for us to assign the exact cause or to say if damages can be recovered from the insurance company. The ailment seems to be incurable.

SPAVIN.

(1) I have a bay horse four years old, weighing about 1,050 pounds, that has a small bone spavin on his left hind leg. It is just beginning to make him lame. Is there any cure for same? (2) I also have a brown horse weighing about 1,450 pounds, four years old, that has a sore neck. This doesn't appear to be painful, but there is a hard, grizzly like, cone-shaped scab forms, which I have cut out once.

(1) Have the spavin fired and blistered by a qualified veterinarian and then tie the horse up short in stall for a six weeks' rest. (2) A "sitfast" is present and should be cut out. The sore will not heal unless this is done. After the operation apply two or three times a day a lotion composed of one ounce of sugar of lead and six drams of sulphate of zinc in a pint of soft water. Label the bottle "poison" and shake well before use.

WORMS OF HOGS.

We have been feeding our hogs a mixture of salt, ashes and copperas in self feeders. What proportion do you advise? We have eighty spring pigs that we want to feed copperas and they do not eat dry mixture. We slop them with a mixture of corn, oats, and rye ground. What amount of copperas should we feed in slop? We use the copperas, salt and ashes as a safeguard from disease.

It is a mistake to dope hogs with drugs when they are well and the mixtures commonly used will not ward off disease, but may prevent or destroy worms. Copperas (sulphate of iron) should not be fed to pregnant animals, as it may cause abortion. For the destruction of worms mix one dram of copperas in the slop, for each one hundred pounds of body weight of hogs and continue for five consecutive mornings. Divide the pigs into lots of five so that they will take their right proportion of drugged slop. The treatment may be repeated in two weeks, or whenever worms are thought to be present. Occasionally use the mixture also tends to prevent worms in hogs.

INJURED TENDONS.

I have a small western bred saddle pony weighing about 650 pounds, seven years of age. For the past two years she has been ridden about ten miles each day. Last spring she showed a little swelling in both front legs from pastern up to knee. It seemed to come and then disappear, but in June the swelling came again in the same place, the back of the leg, and it is still swollen and quite hard. She has run in the pasture the past month.

Thickened or bowed tendons have resulted from a sprain. It would be well to clip off the hair and blister the back tendons, and enlargement, with cerate of cantharides and if necessary repeat the blister in a month. In bad cases it is best to have the parts linefired and blistered by a veterinarian. Where there is swelling of the legs, without lameness, we would simply hand-rub the parts three times a day and then wrap with cotton batting and bandage snugly.

TUMOR.

I have a sorrel horse colt one year old May 1st, which has a hard bunch about the size of a large duck egg right in front of the sheath. It has come on him in the last two weeks and I have done nothing for it. It doesn't seem sore and I can move it around. It appears to be in the skin. The horse is in an open pasture where there are no brush or sticks that he could hurt himself on. When I had him trimmed about the first of June he swelled up pretty badly, but got all right and then this bunch appeared.

Paint the tumor once daily with tincture of iodine and if it softens it will have to be opened for evacuation of pus and then injected and swabbed daily with the tincture until healed. One must make sure, however, that it is not a rupture at the naval (umbilical hernia) before using a knife.

Ask your neighbor to subscribe for The Homestead.

Have You a Cook Stove and a Watering Trough?
Then You Can Re-temper Acme Shares

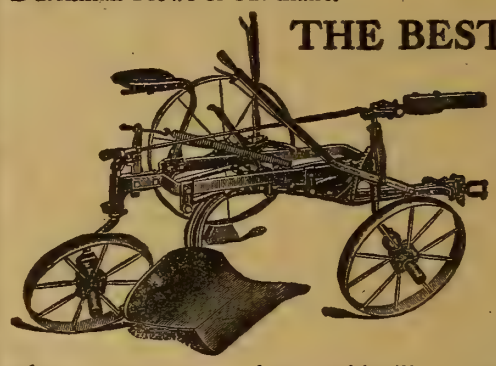
To keep a hard, sharp, keen cutting plow share, you must have one that can be re-tempered after sharpening.

Other plow manufacturers **warn** you **not to re-temper** their shares for fear of breaking them. That means you must plow with **soft, dull** shares after the first re-sharpening.

Anyone Can Re-temper Acme Guaranteed Shares

You can re-temper **Acme Steel Shares** any number of times after re-sharpening, and we guarantee that they will not break either in the process or in the field. Keep them **hard, sharp** and with a "razor edge" their entire life. We take all the risk—you take none—the blacksmith takes none.

Acme Steel Shares are made by our **own** process in our **own** factory. They are used only on **Best Ever** and other Flying Dutchman Plows of our make.



THE BEST EVER PLOW with **Acme Steel Shares** is the most economical for you to own. It is the strongest plow made—the lightest draft plow. It will turn more acres per day, with less wear and tear on the team than any other plow.

If **Best Ever** plows were equipped with ordinary 3-ply shares, used by other manufacturers—they would still be superior to any other plow on the market—but when you add to their many other advantages that of **Acme Guaranteed Shares,** you will agree with us that the equal of the **Best Ever** has never been produced.

Your Flying Dutchman Implement Dealer sells the BEST EVER. Look him up. Write us for our FREE BOOKLETS. DEPT. NO. 11.

The Heider Tractor Again Leads Them All.

Runs Successfully on Either Gasoline, Motor Spirits or Kerosene

We have solved the fuel problem successfully. A simple device permits the use of either Gasoline, Motor Spirits or Kerosene at all speeds and puts our tractor in a class all by itself. A gallon of kerosene runs the Heider Tractor longer than a gallon of gasoline, and develops the same power, thereby doing the same work at less cost than any other tractor on the market.

Its 4-cylinder motor, light weight, great power, simple operation, economical fuel consumption, make it the best, most practical, all-purpose one-man tractor manufactured. Investigate before buying. Write today for free book on Tractor Farming.

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LANDLORD'S LIEN FOR RENT.

In various states of the middle West the law protects owners of land against irresponsible and dishonest tenants by giving the landlord a lien on the crops raised on the rented premises to secure the payment of the rent.

In Iowa the landlord has a lien for his rent upon all crops grown upon the leased premises, and also upon any other personal property not exempt from execution which is kept or used on the premises by the tenant and owned by him during the time of the lease. This lien continues for the period of one year after the rent is due providing it is not more than six months after the expiration of the term. The lien may be foreclosed or enforced by a suit and attachment before a justice of the peace if the amount is within his jurisdiction, otherwise in the district court.

In Kansas rent due for farming land is a lien on the crops grown on the premises and may be enforced by suit and attachment in any court having jurisdiction, and the crops, or so much of them as may be necessary, may be levied on and sold to satisfy the claim of the landlord.

In Oklahoma the law is similar to that of Kansas.

In Missouri every landlord has a lien upon the crops grown upon the leased premises in any year for the rent that accrues in that year. Such lien continues for eight months after the rent becomes due and payable and no longer. It may be enforced by suit and attachment in justice or circuit court, whichever may have jurisdiction.

In Illinois a landlord has a lien for his rent upon the crops grown or growing upon the rented premises, whether the rent is payable wholly or in part in money or specific articles of property or products of the premises or in labor and also for the faithful performance by the tenant of the terms and conditions of the rental contract. Such lien continues for six months after the lease expires.

In Wisconsin, Minnesota, North Dakota, South Dakota, and Nebraska there is no statute providing for a landlord's lien. In these states the parties may make a contract which will have the effect of a lien.

Where a landlord's lien is provided for by statute, the landlord may follow the crop or property subject to the lien into the hands of a purchaser who has notice and hold him liable thereon to the extent of the rent which is due him.

LAW QUESTIONS CONSIDERED.

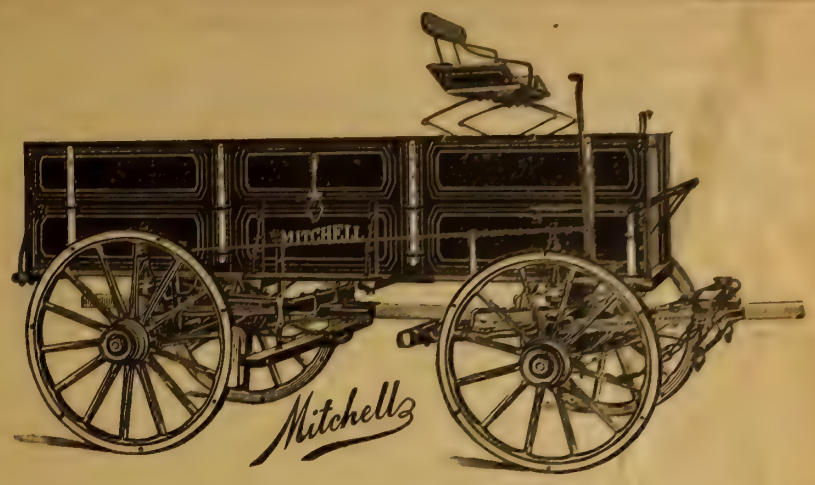
RIGHTS OF ALIENS.

A Subscriber, Exira, Iowa.—What right has an alien to sell or to will property acquired in the United States?

Answer.—The rights of aliens to acquire, hold, sell or otherwise dispose of property in this country, are fixed, regulated and controlled by the constitutions and laws of different states, and it is not expedient for us to examine all these constitutions and laws. The constitution of Iowa, Section 22, Article one, provides that resident aliens have the same rights in respect to the possession, enjoyment and descent of property, as native-born citizens. The laws of Iowa give non-resident aliens limited rights to property within the state. Every state regulates this matter for itself. By the common law, an alien could not hold real estate.

A Subscriber, Osage, Iowa.—A owns the southeast quarter, and the southeast quarter of the northeast quarter of Section 31 in a certain township in Minnesota. B owns the balance of said section. The surveyor finds the section short about three rods on the northeast quarter. Is A required to bear any loss of land by reason of such shortage?

Answer.—Your statement is very indefinite about the shortage. It omits to state whether the shortage is on line running north and south or on line running east and west, and also omits to state whether the three rod shortage at northeast quarter continues of uniform width from one corner to the corresponding corner west or south. Shortage of area in a section means that the section is not exactly one mile square, containing 640 acres, and the shortage must be borne by the owners of the land. In this case, A would have to bear part of such shortage, but how much, would be difficult to say. Only a surveyor could determine the precise area.



GOING a-field in Mitchell wagons has been the habit of generations of American farmers.

It's going to be the habit of generations to come; for the same old company that's been making Mitchell wagons for 79 years—ever since 1834—is going to continue making them in the same honest way and of the same good material that has made the Mitchell known everywhere as Old Reliable.

If you'll study how the Mitchell wagon is made to have strength, light-draft, and long-life built into it you will see why your next wagon should be a Mitchell.

CORN HARVESTER with Binder Attachment cuts and throws in piles on harvester or windrow. Man and horse cuts and shocks equal with a corn binder. Sold in every state. Price $20 with fodder binder. J. D. Borne, Haswell, Colo., writes, "Your corn harvester is all you claim for it; cut, tied and shocked 6 acres milo, cane and corn last year." Testimonials and catalog free, showing pictures of harvester. Address
PROCESS MFG. CO., Dept. 80. SALINA, KANSAS

Why Not Get All the Profit From Your Corn?

EVEN the most unprogressive farmer of today would consider himself badly treated if he were compelled to harvest his grain with a cradle. He is too familiar with the easier and more profitable grain binder method.

Why then do farmers continue to cut corn in the old back-breaking, time-wasting, extravagant corn-knife way? What good reason is there why every corn raising farmer should not use I H C corn binders?

Cut your corn with a binder and you get the stalks and leaves at the time when they are full of nutritious juices and when their feeding value is greatest. The stalks and leaves contain more than one-third of the digestible nutriment of the corn plant. Hand cutting is too slow to enable you to harvest this valuable fodder properly, or it is too expensive on account of the extra help involved to make it worth while. You avoid the waste, the expense and the worrying trouble of securing extra help when you cut your corn with an

I H C Corn Binder

Deering, McCormick, Milwaukee or Osborne

It cuts and binds five to seven acres per day, saves you a deal of labor and trouble, and gives you a plentiful supply of nutritious stover; good for winter feeding because of its warming qualities.

I H C corn binders are built to do the best work under all conditions, whether corn is tall or short, straight, down or tangled, or on hilly or rough ground; and they leave clean fields behind. To get the most out of your crop you need an I H C corn binder. Then when your corn has been cured for a time in the shock, run it through an

I H C Husker and Shredder

Deering, McCormick or Plano

You will save the added labor of husking by hand, and more important, secure at no additional expense the clean stalks, leaves and husks, shredded into palatable fodder—an excellent substitute for your hay, which can then be baled and sold in the best market. It will pay you well to look over the I H C line of corn machines at the local dealer's. Write us for catalogues and full information.

A MACHINE LIKE YOUR GRAIN DEALER USES

THE "Hart" Bucket Elevator is the most massive and securely made elevating device you can buy. Will work under all conditions and handles all kinds of grain, even coal, most economically. Withstands continuous usage without causing trouble This machine, when installed, requires less room, will not block your driveway and is always ready for use.

FINEST quality material is used. Buckets are made of pressed steel 16 inches wide attached to No. 77 sprocket chains. The "Hart" machine absolutely cannot clog. Grain cannot splatter over or carry back at the top. The special front panel, encasing the buckets, makes it impossible for grain to drop elsewhere than into the bin. Machine can be operated with overhead lift or log dumping device.

THE elevator can be installed in any of your cribs—or if you intend putting up a new barn or crib, ask for our **architects plans, furnished free**, to fit your exact needs. Just tell us capacity desired and type of elevator and we'll send information that you should have. Remember—buying the "Hart" machine means having a real elevating plant. Write today for catalog.

HOLSTEIN CATTLE.

Pure-bred Registered

HOLSTEIN CATTLE

Study the external form of any great producing cow; it reveals the manner in which she does her work. You can learn to recognize the essential points that indicate great and economical production—the evidences of consitution, capacity, vitality, blood circulation and ability. These characteristics you will find more generally developed among Holsteins than among other breeds. Holsteins are naturally large animals with an abundance of constitutional vitality and they have been developed by breeders who recognized the importance of those points.

I AM offering a splendid lot of cows and heifers for sale, due to calve in the fall to a son of King of the Pontiacs, or Sir Pontiac Ragapple Korndyke. Will make prices to suit for next sixty days. Also a few bulls of serviceable age for sale. Address ROCK BROOK FARM, Station B., OMAHA, NEB.

OUR DAIRY DEPARTMENT

ALL communications relating to dairy matters should be addressed to this office. Inquiries of general interest regarding dairy management and production will be promptly answered.

THE SHORTAGE OF DAIRY PRODUCTS.

That a general reorganization of the live stock interests of America is going forward is apparent, but in the interim the people most interested to have the reorganization perfected in a manner best suited to the advancement of dairying, are slow to take hold, and there lies the danger. The breed men are the people who should be ever on the alert to press home any advantage the dairy cow may possess to assume the lead in any territory. This is being cared for by press and bulletin from the cattle club headquarters, but we fear that some of the breeders allow their personal interests to blind them to the good of the whole cause. Mr. Rawl gave a most interesting talk in June to the members of the Holstein-Friesian Association at their annual meeting in Syracuse, on community building and co-operation that all can well afford to heed.

To start the ball rolling to develop state and locality interest, the National Dairy Show has this year arranged a program to be published later in which every day of the show will be assigned to developing—or "boosting," if you choose—a branch of the industry and a breed of dairy cattle. The whole machinery of the show, for instance, on Jersey Day will be devoted to advancing the Jersey cow, Jersey milk, butter, ice cream; likewise Guernsey Day for Guernseys; Ayrshire Day for Ayrshires and Holstein Day for Holsteins; also Brown Swiss, Dutch Belted and Dexters in their turn. This makes it incumbent on the admirers of any breed to get under their own breed and develop an interest and bring their neighbors and friends to see the display of their favorites in this great show. The National Dairy Show is the highest exponents of all things "dairy" in the world, and all interested in the dairy cow coming into her own in America should shape their engagements to be on hand on their breed day.

THE CREAMERY NEEDS EFFICIENCY.

The essential point in organizing a co-operative creamery is well set forth by G. M. Lambert, federal dairyman of Salt Lake City, who says: "It is with the idea of receiving greater returns and more efficiency that the majority of co-operative creameries are organized. No creamery can hope to be successful that does not have the thorough co-operation of its patrons in producing a good quality of cream to make good butter. It requires good markets to obtain good prices, and it requires good prices to encourage good dairying.

"Dairying must be considered as one of the state's greatest resources, and as such it must be protected in the same manner and degree as are other state industries and enterprises.

"I believe the state of Montana has taken a great step forward in the way of protecting its dairymen—and it is the duty of every state to protect its people. Montana vested the authority in the state dairy commissioner to say when a new creamery shall be started in that state."

That is an excellent provision, for many creamery organizations have failed because they lacked the knowledge of the essentials for co-operation—a sufficient number of cows, and co-operative spirit and efficient management.—[G. L. Martin, professor of dairying, North Dakota Agricultural College.

HOT WEATHER FEED.

The hot season is at hand and stock keepers are well aware of the difficulties confronting them. It is always a trying season, especially for the dairymen, as pastures become short and dry and flies numerous. Those who have had experience with feeding silage during the summer, are familiar with its advantages, and the time is not far distant when the summer silo will be as carefully provided and filled as the winter silo, especially in sections of the country where pastures

No Hoops to Tighten

WALTER-WALWORTH-WIS

become dry and poor during the months of July and August.

During hot weather a cooling, succulent feed should be given and as it often happens dry, heating feed is used owing to the failure of the pastures. Corn silage being succulent food and acid in character, it is a splendid ration for hot weather. Both man and beast crave watery food during the hot season and nature as a rule supplies this. For example, green foods, vegetables, fruits and melons are in season during the hottest time of the year. To get best results, therefore, we should feed succulent rations to our stock in hot weather.

By turning part of the pasture land into corn ground and putting the corn in the silo a large increase in good, succulent food may be obtained. It has been demonstrated that land devoted to silage corn will supply six times more feed than if the same amount of land be kept in pasture. This is certainly worth considering if the land be high priced and the seasons uncertain. In fact, it is very difficult to figure a profit from pasture land which is valued at more than $100 per acre unless the season be very favorable to grass.

Several years ago I had an opportunity to discover the great value of the summer silo with a herd of dairy cows. The season was extremely hot and dry and the pastures failed absolutely during July and August. The cattle were taken off from the pasture and were allowed the freedom of a small paddock. They received good corn silage twice daily with a ration of grain given in amounts according to the needs of the animal. During that summer the herd made larger records than any summer previous and the cost of production was the very lowest.

Silage may be fed not only to cattle, but sheep, horses and even swine. The Michigan Experiment Station found a small ration of corn silage valuable and economical when given to work horses during the summer season.

With a summer silo the number of cattle carried on the farm can be doubled without requiring the purchase of additional forage, for much of the pasture land can be used for corn and other crops.

Keeping in mind that the cost of production is the key to success in all kinds of industry, the stock feeder should figure closely and he will do well to count the summer silo as one of the necessary equipments of his farm.—[A. L. Haecker.

THE PASSING OF THE FARM CHURN.

To the Editor of The Homestead:

In sections where dairying has become a dominant feature the farm churn has become almost a relic of the past. Recently I spent a Saturday evening in a village in which there were more cows than people. All the good housewives were lamenting that they had no butter for Sunday and that there was not a pound in all the stores in town. An inquiry as to the reasons for all the families' buying butter revealed the fact that formerly all the dairy produce went to a co-operative creamery and was here made into butter. It was a very easy matter for each patron to have carried to them by the cream haulers such amounts of butter as might be needed. About one year previous to my visit the business of the co-operative creamery had been taken over by a condensary which, of course, did not make butter. Few, if any, of the families had separators. Many of them did not require scrubbing. The co-operative creamery is a blessing to the housewife who is relieved of churning by it.

As a matter of economy, undoubtedly the creamery pays more for the cream than the market value of the butter would amount to, for under farm conditions not a high percentage of the total butter fat is secured in churning. The passing of the farm churn is one of the things that helps emancipate the farm woman from what has been considered drudgery.

H. E. McCartney.

FEEDING GRAIN IN CALVE'S MILK.

To the Editor of The Homestead:

I was interested in some advice given by your Farm Furrows' editor in which he does not recommend the practice of putting grain in the skim milk that is fed to calves. While I agree with him that it is a better plan to feed grain separately, yet I think that it is better still to scald the grain, allow it to cool and then add it to the milk. If the grain is ground and but little is used at first, there will be no scours, and you will find that you can increase the amount of milk without any detriment to the calf whatever.

By following this plan the calves can be carried along in good shape and the milk can be used for other purposes, particularly for pigs. The boiling of the water will disinfect the vessels each time so that first principles of cleanliness are complied with. It is better to have stanchions arranged so that the calves can be kept separated for a short time after they are fed. G. H. Van Houten.

Taylor county.

On land devoid of sufficient organic matter or sand, there sometimes occur spots that are apparently dead or unresponsive to water and plant life to any marked degree. Lack of plant growth is sometimes attributed to want of water, and oftentimes such may be the case, but the spots in question are of a different nature from the surrounding soil, usually very compact and almost impervious to water, indicating a too large percentage of clay. Experiment has shown that these spots can readily be brought to a high state of fertility by the proper incorporation of manure. Such a condition could not easily be remedied if it were a case of alkali, which answers the question several times asked, whether or not this be a case of alkali.

The flies are again the "worst ever." It is a wonder that cows can find time to eat during the daytime unless they are protected in some way. Fly sprays are good, but not many of us take time to apply them as we should.

Do Your Horses Earn Money For You?

YOU CAN DO IT WITH A REO

Before you answer that question, we ask you as a business man, to consider the time and land you use to raise horse feed, and the money and care your horses take. Then think what you get for it—Is the work they give you worth all it costs? Isn't it true that you actually work for your horses more than they work for you?

You would be surprised to know how many farmers are realizing the value of Reo Motor Trucks. Even if your horses worked all the time—and you know they are in their stalls days at a time, "eating their heads off," this Reo Motor Truck would prove a money saver for you.

Forty cents worth of gasoline, five cents worth of oil, is all the feed this motor truck requires. Repairs almost nothing. One man recently wrote us his Reo Truck had cost him, besides fuel and oil, just $1.33 in two years.

These are facts you can't get around. Write and get some real, live information about motor trucks and the money they can save for you.

REO MODEL H
Capacity 1500 lbs.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

WHITE DIARRHEA.

To the Editor of The Homestead:

A correspondent writing from West Union, Iowa, reports great losses from white diarrhea in her flock of little chicks. She asks for a remedy, also inquiring whether plenty of drinking water is injurious.

A number of articles have appeared in The Homestead from time to time telling of what has been discovered by government investigators in regard to this malignant plague—white diarrhea. So great were the ravages some years ago that the government appointed expert investigators to discover, if possible, the causes of the disease, also a remedy if possible.

The result of this investigation showed that the disease came from a germ present in many adult fowls which seemed to be little affected by its presence. But to the baby chick its presence is malignant and fatal. The most common means of its propagation is by way of the germs deposited on the egg shell when laid. In the process of incubation whether in the incubator or under the old hen, but more readily in the former as the germs multiply on the shells to an almost incredible number lying in wait for the chick to emerge, when it becomes their prey. Their presence is revealed by the so-called white diarrhea, and when this stage is reached remedies are of little avail.

This is a case when the "ounce of prevention" is the only recourse. Washing the incubator after each hatch with scalding hot soap suds, using also some one of the coal tar disinfectants such as napcreol, etc., is the first step. If the nursery tray is covered with burlap, put on a fresh piece after each hatch, washing, disinfecting and turning the egg trays. Then before placing eggs in incubator, wash them in 95 per cent pure alcohol solution. Pure alcohol, not denatured or wood alcohol is required.

Following this method white diarrhea has been eliminated from many a flock and even with its partial adoption in the country, the percentage of annual loss has been greatly lessened. In this way one of the greatest menaces to the poultry industry is being overcome.

Boiled milk, if fed in a sanitary fashion, is excellent for all chicks with bowel trouble. A little copperas or venetian red in the drinking water may be better than the clear fluid.

The ground on which the affected chicks have run should not be used for subsequent flocks, till then has been time for a thorough disinfection. This can best be accomplished by growing some sort of crop upon it. Put the new chicks on fresh, untainted ground. Mrs. S. B. Titterington.

MOLD ON AIR PASSAGES OF POULTRY.

To the Editor of The Homestead:

The disease known as aspergillosis is caused by a growth of mold in the air passages causing rapid breathing, rattling in throat, general exhaustion and extreme emaciation. The chicks literally starve to death in the midst of plenty. Throw food within reach and they appear to eat ravenously; examine the crops and it is the same old story—completely empty. "Going light" is the most expressive description given. The chicks get thinner and thinner, and eventually die. By far the greater number of chicks that die from unknown causes are victims of aspergillosis.

The disease is a fungi which may be found on dead or decaying matter, or in musty or moldy grain or litter. These fungi may be taken into the system with the food or by respiration. Not every chick is susceptible to the trouble, just as some people are immune to certain ailments. From a score of men who scooped and hauled oats where this fungi had developed, nineteen were seriously ill. The one escaped; very probably because of his superior lung power.

Medical treatment is of little or no good when the flock once becomes afflicted. We have only known of one affected chicken that lived and it never thrived. It grew to a fair size, but always had the appearance of a laggard, the plumage was dull and although a well-bred chicken it looked like a mongrel.

Prevention is the only remedy and that is not always easy. We unwittingly gave this dreaded trouble a start in one lot of chicks this spring. The prepared chick feed, which we invariably feed to the youngsters until they are five weeks old, was used. The howling mob was hungry and in desperation I searched for something to give them temporarily. A box of oatmeal that had been forgotten was found and some of the contents given to the hungry little scamps. Within twenty-four hours I saw one chick begin to show symptoms of aspergillosis. With grave misgivings the contents of the oatmeal box were examined and found to contain mold. The weather was warm and conducive to a rapid growth of the fungi and within one week half of the lot of healthy, happy youngsters was dead.

I am passing this experience on, hoping to warn others of unseen pitfalls Minnie G. Stearns.

WITH THE EDITOR.

A recent number of The Woman's Home Companion contains a tribute to the country woman which readers of this paper will enjoy.

After a statement that it has never seemed wise to The Woman's Companion to assume that the interests of the women who live in one kind of community are essentially different from those of the women who live in another (in which opinion we heartily concur) the article proceeds:

"In one way, however, the country woman is in a distinct class, and a very important one. She is pretty sure to be an expert in one or more self-supporting businesses—perhaps poultry raising, perhaps bee keeping, perhaps dairying, perhaps gardening, and almost always cooking, canning and preserving. She may even be—and often is—an expert in all of these things.

"Along with this practical knowledge of a number of wholesome occupations the country woman is, from her environment, the possessor of a resource at once so intelligent and capable that it behooves those who observe it to admire. She can hitch the horse to the buggy, and drive him, too; she can round up the cows that have broken through the pasture fence, and mend the fence; she can put out the fire in the chimney when the men folks are far afield; she can administer first aid treatment of the very best to bad burns or cuts or broken arms, as well as such minor ills as hornet stings or stone bruises; she is apt to be a pretty shrewd judge of cattle; she can make and mend her own and her children's clothes; she knows how to cure meat, to shoot a marauding hawk, to prune a rose bush, to make soap, to beat a carpet and she looks at none of these things as an adventure or a unique experience, but simply as part of the day's work.

"Her interest in politics is keen and clear. Ask her who is the sheriff of the county, the state's attorney, the county clerk, the register of wills—she will tell you and outline the circumstances of their election.

"Because she lives with the actualities of life, she is not likely to put undue importance upon non-essentials. Comfort, neatness and cleanliness, above style, are desired in her home. Her table is supplied with palatable and wholesome food neatly served. She does not worry about the lack of lace center-pieces, or monogramed linen; she knows that if she is comfortably dressed in neat, clean clothes befitting the occupation in hand and suitable to the weather she is a truly well-dressed woman. She asks, 'Will it wear well?' when she goes to buy, and she is a very astute purchasing agent, keen at a bargain, knowing exactly what she wants and what she wants to pay for it.

"There is just one phrase that fits her—'Salt of the earth.' Let us by all means put her in a class apart and yield her the respect due her."

HOME AND HOMEMAKING.

REGRET.

If only we had loved them more,
Our lost, whom love can never reach,
Who thrill not at our tenderest speech,
Nor answer, though our hearts implore.

If only for one little day,
One day of days—they could return,
How would our grateful spirits yearn
To lavish treasures on their way?

Our feet to serve them, ah, how swift!
Our hands how gentle; and our eyes
How clear to see, should shadows rise,
Or griefs their perfect gladness rift.
Too late! Come back no vanished hours;
But, living and beloved, there still
Remain sweet friends. Be ours the will
To strew their paths with thornless flowers.

EASY, BUT FATAL.

The happiness of any home can be murdered by any two people in it, each determined, daily, to have his or her own way. Riches or poverty, position or obscurity, have nothing to do with it. Home happiness is built on unselfishness and sympathy and forbearance—or else not built at all, but scattered into ruin.—Ex.

VEGETABLE WAYS.

Hungarian Carrots.—Peel and cut carrots into pieces one inch and a half in length. Cut these pieces into thin slices, and cut these slices into strips a little larger than matches. Boil them in salted water until tender. Drain off the water and add one-half cup of sugar and one-fourth of a cup of vinegar. Cook for fifteen minutes in this mixture and serve.

Pork and Turnips.—Select lean, ragged pieces of fresh pork for which there is no other use and put them on three hours before dinner with twice the quantity of turnips. Salt and pepper should be added at once and just enough water to keep them from scorching. Cook slowly all morning and the turnips will be delicious and savory.

Green Pea Souffle.—Either freshly cooked or canned peas may be used. Drain and mash them with two tablespoonfuls of butter; add a pint of milk, the well-beaten yolks of three eggs, salt and pepper to taste, and the stiffly whipped whites of the eggs. Turn into a buttered pudding dish, cover, and bake for twenty minutes, then uncover and let brown. Serve immediately before it falls.

Glazed Onions.—Choose mild onions for this way of cooking. Melt one-half cupful of butter in a saucepan, then put in as many peeled onions as will fit in without crowding. Move about until all are well-coated with butter, sprinkle with a tablespoonful of sugar, then pour over them a well-flavored soup stock. If you have no stock on hand, dissolve a little beef extract in hot water and salt well. Simmer until the onions are tender, take off the lid of the saucepan and let the stock simmer down to about a half cupful. Serve in a heated covered dish as an accompaniment to chicken.

AMONG OURSELVES.

"Variety is the spice of life" is an old wise saw, and may be a true one. We will test it a little this week by having Annabel De Forest talk about Ourselves as we have appeared in the eyes of others—a not unpleasing picture, even to Ourselves. And then having made the acquaintance of Princess Appears-To-Be, our writer will show us a picture of Princess Really-Is. These charming heroines may have come to your attention before, if so, you will doubly appreciate the situation:

"Give the boy a chance," "Give the girl a chance," has become a sort of slogan that is heard on every side. Why not go a step farther and add, "Give the farm woman a chance?" True, for the past few years there has been stereotyped on the public mind a picture of that individual so altogether charming that apparently it left nothing to be desired. So familiar has this mental prototype become, that, given a woman, an auto, a rural free delivery, a telephone and a center table covered with periodicals and immediately we exclaim, "Behold the farm woman!" The favored creature of elegant leisure, of social advantages, strawberries and cream! We are only too glad to admit that the picture is fairly true to life in many cases, but some worthy people seem to be unaware of the fact that "there are others." For this fortunate class an article, such as this would scarcely have interest. Most certainly not unless they happen to be animated by that spirit to which a great and gifted soul gave utterance when he said, "Who is weak and I am not weak?" And (I may be allowed to add) that inspiring spirit of helpfulness that so often sheds its beautiful light over the home page of our paper. That spirit of oneness that makes the whole world kin, and which must irresistably impel us to put our shoulders to the wheel when a lift is needed. If one who has intimate knowledge of farm life and who can read between the lines, could find a magic wand that, without violating the canon laws that protect the individual home from intrusive observation, would yet enable him to lift the veil a trifle he might disclose a picture somewhat different from that depicted above—with the farm woman still as a model. Like the paralytic on the brink of the healing water, how often she sees stretched before her a sunlit sea of opportunity, "so near and yet so far," into which she can scarcely dip the tip of her finger. There may (or may not) be the latest magazine, but most surely there is the dairy, the garden or the chickens. There may (or may not) be the telephone inviting to neighborly intercourse, but beyond shadow of doubt there are the insistent hourly demands of the household that are ever ringing their calls. Thus, day by day, willing, gladly, but none the less surely, she lays upon the altar of home duties her personal inclinations and needs together with many cherished dreams of self-improvement. The charm of intercourse with kindred minds by means of

DRAKE UNIVERSITY
A SCHOOL OF IDEALS
Liberal Arts--Bible--Law--Education
Music—Dramatic Art---Painting and Drawing
Home Economics, Physical Education

Howard Hall—Conservatory of Music.

Engraving Dept. Des Moines, Iowa.

the printed page, she often comes to look upon as a real temptation, the yielding to which would be little short of disastrous to some home interest. Unquestionably it is both kind and wise to present the most sane and cheerful view of every situation, and nothing is more profitless than sighing for the unattainable, but at the same time nothing is gained by crying "Peace, peace," when there is no peace. It is true philosophy to occasionally take stock of our advantages and disadvantages, and, ofter setting them forth, fairly and squarely strike such a balance between our inward needs and wishes and outward conditions as will enable us to keep a happy contented heart while we work to better those conditions. But shutting our eyes to the obvious fact that there is room for improvement is simply to act the part of the ostrich. Of one thing there can be but little doubt. If one were asked to name the eighth wonder of the world he could safely and unhesitatingly answer. "The wife of the average farmer who performs the multitudinous tasks that wait her all hours and in all shapes; who, while caring for the physical wants of all, still finds time to minister to their higher needs, molding the tender minds, hearts and souls committed to her guidance as the potter molds the clay into forms of grace, beauty and utility; who is a true helpmate to her husband and enhancing his every blessing, sharing his every care; who takes a woman's place and does a woman's part in the community, who never wholly relaxes her grasp on the aspirations and ambitions of an earlier day; and who through it all retains her health, elasticity of spirit and a greater or less degree of her natural attractiveness." And to the man who possesses this "gem of purest ray serene" one might well say: "Prize her as the apple of your eye for she is the miracle of the twentieth century!" And the twin marvel of the age would undoubtedly be the man who understands. The man who sees the ever broadening horizon of woman's possibilities and obligations and who realizes that the solution of many problems that vex and perplex us will be helped and hastened by her influence, her spiritual insight, her uncalculating adherance to true and noble conceptions of human life; the man who perceives, if only through a glass dimly, the strivings of the complex nature that walks and works by his side, from whose heart continually goes forth a cry for closer affiliation with every force, near or remote, that tends to elevate, refine and strengthen. Such a man will loyally determine that the burden-bearing phase of her existence shall be brought into juster proportions with other essentials and that every possible labor-saving device shall be employed for the conservation of time and strength. This is one way, and a very real and practical one, in which a multitude of farm women could yet be given a chance.

And every valley shall be exalted, and the rough places shall be made plain, before the coming of——. Is there not a tendency to think that this exalting, this straightening, this smoothing, this leveling must be done by others than ourselves,—the angels, for instance!

If things are not as smooth, as straight for us as they might be, how better can we live than to lend a hand every possible time to making things better for those who are to follow us? Such action gives a persistent energy and a definite direction as well as a high tone to even the common round":

When you make fruit butters, try cooking it in the oven and save stirring so much and keep it from burning and from spattering the stove. Also after the fruit is cooked, run it through the meat grinder instead of the colander. After peeling fruit, cook the peeling and cores (if clean) with water to cover, then strain off the juice, heat and can in fruit jars. Then in the winter when a fire is necessary it is easy to make several glasses of jelly with no waste of fuel or strength as there would be in the summer when one has so much to do.

THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Aunt Mary, Hawley, Minn.

OUR BIRD FRIENDS.

(First prize.)

We have a grove near our house which is a favorite spot with the birds for their home. There was a family of robins that I cared most about. It was because the baby robins were very tame.

One day I was sitting out on the lawn under the trees. One of the little robins that had been walking around my chair for some time, flew up on my arm and then to my shoulder and stayed there until its mother coaxed it away with a bit of food.

There is also a couple of wrens that have built their nest in a gourd that hangs on the garden fence. The gourd is about three feet long. My father cut a hole in it to get the seed out and in there they carried sticks, straws and feathers. They are about the happiest birds I have seen, as they are singing all the time, and a very pretty song it is, too.

Another pair of wrens live in the wall of the shop. They enter through a knothole.

There is a very pretty singer. It has a white breast and has a black-brownish color other places. The young ones are about the size of a young robin. I do not know as I have ever seen the older bird. It seems very tame and sings all the time. Our neighbor took it over to show it to his mother, and it would sit in the palm of his hand and sing. It will also sit on the fingers of the men and seems glad, too. I would like to know what kind of a bird this is, as I have never seen any before.

There is a nest of swallows in our horse barn, they are not very tame, as they fly away when anyone enters the barn.

Here is a list of birds that live here during the summer and some of them stay here all winter: Robin, mourning dove, crow, oriole, gold finch, crane, redbird, quail, wood-pecker, wren, sparrow, king-fisher, meadow-lark, sap-sucker, hawks, bluejay, yellow-bird, owl, blue-bird, swallow, buzzard, bobolink, chickadee, black-bird and grosbeak.

Oriole, age 13.

Advice To The Young.

(Second prize.)

We are now called young folks, but it will only be a short while before we will be classed with the grown-ups. We are most of us living a happy, joyful life, little thinking of the sorrows and the sadness that is sure to come to us sooner or later; we each wear a cheery-looking smile, and all aim to amuse ourselves to the very end of the day; we love to associate and play with one another, and to make each other happy, and as we grow older let us not forget our youthful way of living, but continue to be bright and happy and give a word of encouragement here and there.

Let us make it a rule not to talk of our troubles, but of something interesting, something bright you have heard or seen, and do not forget to wear your sweetest smile; and if you pass where anyone can see you, why, just a smile or wave the hand—it may help to brighten a lonely life.

Sometimes it is the little things that count. Christ. S. Hansen, Wis.

A Poor Chance.

(Third prize.)

There was an old hen sitting on fifteen eggs in the woodhouse. And there was also a basket near her nest with a few new potatoes in it. One day I went out to get some potatoes for dinner, and what do you think? The old hen was sitting on the potatoes. I hope she will have a nice brood of chickens. Don't you?

Brown Eyes, Ind.

Now is the time to go after the weeds that are growing on the part of the farm that is used for a public highway. It will take only a couple of hours and the satisfaction of presenting a proper "front" to the travelling public will more than pay for the work.

If the element of luck enters into farming anywhere it is in the drying of the hay crop and even with this the failure is often laid to bad luck when just a little hustle would have meant good luck and success.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

6039 Boys' Blouse.—This blouse is a very nice design for the schoolboy. It is simple to make and very good looking. The pattern provides for choice of two styles of collar, the sailor or turn-down style. The sleeves are nicely plaited at the bottom.

The pattern 6039 is cut in sizes 4 to 12 years. Medium size requires 2½ yards of 36-inch material and ⅞ yard of 27-inch contrasting goods. Price of pattern ten cents.

6227 Draped Three-Gored Skirt.—The draped skirt is worn by everybody. This skirt has three gores and closes at the side of the front, where it is slightly draped. In the back there is a wide panel in box plait effect.

The pattern 6227 is cut in sizes 22 to 30 inches waist measure. Medium size requires 3⅛ yards of 44-inch material. Price of pattern ten cents.

5978 Misses' Dress.—This dress can be made with either the empire or regulation waistline. The skirt is cut in four gores. Linn, serge or ratine can be used to make this dress.

The pattern 5978 is cut in sizes 14, 16 and 18 years. Medium size requires 4½ yards of 44-inch material with ½ yard of 27-inch contrasting material. Price of pattern ten cents.

6063 Girls' Dress.—This dress closes at the front and may be made with long or short sleeves. The collar, cuffs and belt are of contrasting material. The frock is quite easy to make and may be constructed of wash goods.

The pattern 6063 is cut in sizes 6 to 12 years. Medium sizes requires 3⅛ yards of 36-inch material and ¾ yard of 27-inch contrasting material. Price of pattern ten cents.

6240 Girl's Dress.—This dainty frock is made to slip on over the head, it has no other opening. The neck is trimmed with a wide collar and there is a very deep yoke, if desired. The sleeves may be long or short and the inner shield at the neck used or omitted.

The pattern 6240 is cut in sizes, 4, 6, 8, 10 and 12 years. Medium size requires 3 yards of 36-inch material with ⅞ yard of 27-inch contrasting goods to trim. Price of pattern ten cents.

6097 Girls' Dress.—This tunic dress gives a chance for a highly dressy frock. The dress is complete without the stole panel of front and back. Front and back are made with a simple waist to which the sleeves are attached and which is joined to the box-plaited skirt. This style is excellent for linen, pongee silk and even for simple ginghams.

The pattern 6097 is cut in sizes 6, 8, 10 and 12 years. Medium size requires 3⅝ yards of 36-inch material. Price of pattern ten cents.

Rist's Seed Wheat.

With this issue of The Homestead, Frank J. Rist, Humboldt, Neb., is starting an advertisement in which he is offering The Homestead readers seed wheat of the University No. 42 strain. This variety of wheat is the pure Turkey Red and in thousands of cases has proven that it is the best winter wheat for the corn-belt country. This particular strain was developed at the Nebraska Agricultural College at Lincoln, and was called variety No. 42. This strain was developed from a single head and was the best yielder, also the best colored and nicest berry of the 1,000 plants started with. Only one or two other varieties were so heavy yielders and they did not have the stiffness of straw, nice color of berry and other attractive features that commended No. 42. Mr. Rist is a graduate of the Nebraska Agricultural College, and was quick to see the advantages of this strain and was about the only grower to take seed of this strain. Consequently he has about the only available supply of seed. Mr. Rist is an enthusiactic seedsman. Has made the business of plant breeding and seed production a life work and the writer is of the opinion that better seed stock will be out of the question, hence we advise writing Mr. Rist at once, and placing an order for some of this seed. The prices are moderate. Considering the care and time taken to produce these seeds, they are positively cheap. This strain of wheat has in many instances yielded from five to ten bushels more than the ordinary good wheat sown over the country. So far as reports have come to Mr. Rist, there has not been a single case where this wheat has not made a fair average over the ordinary good wheat and the price charged is little, if any more, than most seed dealers will ask for the ordinary good stock. Mr. Rist is not a dealer, he is a grower, and also president of the Nebraska Pure-Bred Seed Growers' Association and all seeds shipped from his farm will be inspected by a competent judge from this association. Write Mr. Rist immediately for full information concerning this seed wheat and mention The Homestead when doing so.

TIRES AND TUBES AT CUT PRICES

We are offering now to motor owners all over the United States standard make tires at the lowest prices ever heard of. These are not a lot of old nameless tires. Every one is a well-known make, such as Fisk, Diamond, Goodyear, Empire, etc. Take your choice. This partial list gives you some idea of the reductions:

30x3	$10.10
30x3½	14.20

ARKANSAS land. Low price, Easy Terms. Map and booklet free. Geo. R. Lochrie, Gifford, Ark

Hanna's Short-horn Sale.

The dispersion sale of D. R. Hanna's Cottage Hill herd of Short-horn cattle at Chicago, Ill., July 29th and 30th, was a very successful event. There were 104 head of cattle sold for $31,790, an average of $304, and when one takes into consideration the fact that it was a dispersion sale without any sort of a guarantee back of the cattle, the result is very convincing evidence of the strong demand for beef cattle. The attendance was very large, not only of well-known breeders, but there were many new faces at the ring side and the list of buyers contains many names not heretofore associated with the Short-horn breed. The cattle were widely distributed, going to Iowa, Michigan, Indiana, Ohio, Virginia, Kentucky and Mississippi. Much interest centered around the sale of the herd bull, Villager, his sons, Village Denmark and Village King, and the imported bull, Champion of Scotland. H. O. Weaver, of Uppermill Farm, Wapello, Iowa, was the buyer of Villager at $3,550. This was the top price of the sale. The contending bidder was F. W. Harding, of Anoka Farms, Waukesha, Wis. Mr. Weaver also purchased Imp. Champion of Scotland at $1,750 and took a number of the best breeding cows in the offering. John Garden, who has been so long in charge of the Hanna herd, is to become associated with Mr. Weaver at Uppermill Farm, and the public may confidently look for the production of some very high-class cattle at this breeding establishment. Village Denmark went to F. W. Harding, of Anoka Farms, at $1,300 and the same gentleman was the buyer of Village King at $400. E. M. Hall, Carthage, Mo., secured the yearling show bull, Village Flash at $750, at which price he was a decided bargain. The top for females was $730, paid by Anoka Farms for the yearling show heifer, Village Flora 2d, and the same buyer took Village Flower 2d, another yearling daughter of Villager, at $660, and a full sister calved in January, 1913, at $500. The imported cow, Augusta 83d, with a bull calf at foot by Villager, went to F. C. Barber, Skidmore, Mo., at $510, and W. B. Bonnefield, Ottumwa, Iowa, paid $475 for the three-year-old Duchess of Gloster 42d with a bull calf at foot. Robert Failon, Neponset, Ill., secured good value in the two-year-old heifer, Heather Belle 5th at $425. Frank Toyne, Lanesboro, Iowa, was a liberal bidder and buyer as was also A. E. Stevenson, Port Huron, Mich.; Bellows Bros., Maryville, Mo.; W. W. Vaughn, Marion, Iowa; J. H. Warren, Delaplaine, Va. Cattle were secured by the agricultural colleges of Iowa, Kansas and Ohio and Dan Coombs purchased several head for Greenfield Plantation, Greenfield, Miss., where he and his brother are establishing a herd of Short-horn cattle. The entire sale was conducted in a very satisfactory manner by Manager John Garden. Cols. Wood, Jones and Reppert were the auctioneers and the following is a detailed list of the sales:

FEMALES.

Arabella, calved 1910; Uppermill Farm, Wapello, Iowa	$ 230

Iowa State Fair and Exposition
DES MOINES, IOWA, AUGUST 20TH TO 28TH

Some of the Farm Teams in the Exhibit at the Iowa State Fair Last Year.

Premiums $76,000 **Race Purses $15,700** **Exhibits 800 Car Loads**

Bigger, better, more complete than ever. The largest premium offering in the history of the fair is calling forth more and better exhibits.

Most famous breeding districts of the world are searched by Iowa State Fair exhibitors for their best animals. All of the most successful live stock breeders show at the fair.

Greatest live stock exhibition in the world at the Iowa State Fair. The annual exhibition of live stock from the world's most famous breeding districts.

Most popular race meet in the middle West. Purses for the races this year total $15,700, the largest sum ever offered for the state fair race program, the first of the big fall race meets.

An ideal outing and summer school. Better than any short course. Object lessons in the most successful methods of agriculture and live stock breeding.

Ideas gained can be cashed into dollars. The wide-awake visitor gets new ideas which he can later turn to most profitable account. Lectures, demonstrations, something of profit for every member of the whole family.

Sixty acres in farm machinery. The only way the farmer can keep in touch with the wonderful advancement in machinery, so vital to the conduct of his business is to attend the fair.

A complete exhibition full of inspiration, recreation, instruction. A special program every day. Unusual opportunities for education and amusement.

"Old Mexico," big night show, spectacular and exciting. Horse show five nights at the pavilion. Thrilling specialty acts. High hurdling horses. Four bands of music. Great fireworks display.

C. E. CAMERON, Pres., Alta, Iowa **AUGUST 20th-28th** **A. R. COREY, Secy., Des Moines, Iowa**

Chester White Swine.

Oct. 14, M. W. Young, Ankeny, Iowa.
Oct. 30, W. P. Doolittle, Woodland, Mo.
Feb. 12, J. H. Stewart, Dickens, Iowa.

FIELD NOTES.

Readers of this paper who think of buying Shetland or Welsh ponies are directed to the advertisement of T. S. Simpson & Sons which appears on page 24 of this paper. The Simpson herds are large and contain many ponies of exceptional character as well as those of the cheaper sort. Catalogs or descriptions may be obtained by writing to T. S. Simpson & Sons, Aurora, Ill.

Thirty choice Chester White spring boars are advertised at bed-rock prices by A. C. Orme, Nodaway, Iowa, on page 24.

S. F. Lockridge, Greencastle, Ind., a veteran breeder of Short-horns and who has produced many cattle of note, will sell a draft of fifty head from his herd at Chicago, Ill., on October 13th. Particulars will appear later.

An advertisement of the Edwards steel shingle on page 9 informs our readers fully on the importance of good steel shingles and the qualities of the Edwards. Get prices and descriptions from the Edwards Mfg. Co., 890 Lock St., Cincinnati, Ohio.

Now that threshing has begun in good earnest the importance of the Dandy pump end gate advertised on page 15 should be fully recognized The advertisement tells about it. Special prices may be learned by writing to Minier End Gate Co., Dept. 130, Minier, Ill.

Farmers have been a little slow to realize the fact that a good spring on a farm wagon has its uses. It makes an easier running wagon, saves horses and saves the wagon. The Harvey Bolster spring advertised on page 11 can be attached to any wagon. Write for prices and descriptions. Address Harvey Spring Co., 734 17th St., Racine, Wis.

The hinged door silo advertised on page 10 is presented with the argument that the door arrangement will cut off one-half of the labor at feeding time. A booklet or catalog giving reasons and special prices may be obtained by writing to Woods Bros. Silo Mfg. Co., Lincoln, Neb., or either of the addresses given in the advertisement.

An advertisement of the Sykes Metal Lathing & Roofing Company appears on page 14. It announces the advantage of Sykes galvanized or painted roofing when obtained direct from the mill. Free samples may be obtained without cost. At the same time other information of intense interest to builders will be forwarded. Address the Sykes Metal Roofing, Co., 520 Walnut St., Niles, Ohio.

The good, old Fairbanks scales advertised on page 6 have fulfilled their purpose on farms of the United States for a great many years and they are today just as valuable as they ever were. They are made on the most approved plans of durable materials and are absolutely accurate. For low prices ask for catalog No. Z F 603, Fairbanks, Morse & Co., 902 South Wabash Ave., Chicago, Ill.

There doesn't seem to be much use in going into detail in the matter of the big Montgomery Ward & Company advertisement that is to be found on page 2. It tells its own story. The new catalog spoken of may be obtained free by filling out the coupon in the advertisement and mailing it to Montgomery Ward & Company, Chicago, Ill., or either of the addresses named in the advertisement.

It is no use to spend time and labor in raising a grain crop and then not house it in such a manner as to prevent loss. The advertisement of the Northfield steel bin on page 8 shows how perfect protection from loss and from rats may be given. The bin is durable, convenient and is sold at an economical price on a thirty-day trial. For catalog, prices and easy terms, address Northfield Iron Co., 118 Water St., Northfield, Minn.

From the time when farmers first began to raise corn the work of shifting from the wagon to the crib has been trying, man killing and time killing. Now we have such machines as the Sandwich farm elevator which will do all this work automatically and in a few minutes, thus saving the time of the huskers and their muscle as well. The Sandwich is advertised on page 6. The manufacturers have published a free book describing it fully and illustrating its advantages. Write for this book to Sandwish Mfg. Co., 170 B. St., Sandwich, Ill.

It happens quite frequently that the farmer who jumps on a job quickly and gets it over with is ready for another one that will make him money. One of the best ways of following this plan is to own a Hart-Parr Oil tractor such as is advertised on page 6. A one-man plowing outfit is capable of doing a lot of money-making work in the fall season when most farmers are idle. How it is done and why it is done and why the Hart-Parr Oil tractor is the machine for it may be learned in the catalog, for which write to Hart-Parr Co., 228 Lawler St., Charles City, Iowa.

Carl A. Rosenfeld announces his herds of Aberdeen Angus cattle and Poland China hogs in a manner that will be interesting to breeders and farmers who need animals of the breeds named. The Rosenfeld herd of Aberdeen Angus cattle scarcely needs commendation from us. It was established on the basis of the best blood obtainable, and as Mr. Rosenfeld is a caretaker of unusual ability and a good and judicious culler he has now in his pastures a lot of cattle that might please the most critical buyers. In particular there are some fine young bulls that he will sell at quite reasonable prices. When it comes to Poland China hogs there is something worth while on the Rosenfeld farm. They were selected because of size and quality and have been bred along the same lines until they are just as good as the breed affords. He has spring and fall boars to dispose of and as the number is limited buyers of the best sorts should investigate without further delay. Both herds will be on exhibition at the coming Iowa State Fair. For prices, descriptions or other information write Carl A. Rosenfeld, Kelley, Iowa. See the advertisement on page 22.

Some splendid fall and spring Duroc Jersey boars are advertised for sale by Fred Swan, Missouri Valley, Iowa, on page 23.

Jesse Binford & Sons, Liscomb, Iowa, write as follows: "We are asking very low prices on Short-horn bulls. Anyone needing a bull will do well to write or visit us. One of our recent sales was a bull to Senator Work, of Minnesota, who maintains one of the large herds of the Northwest.

Frank Fortmann, Dyersville, Iowa, makes a change in his advertisement on page 12 announcing that he will close out his entire flock of Single Comb White Orpingtons in the next thirty days. There are 250 birds in all and they will be sold singly or in lots to suit purchaser, at most reasonable prices.

In Indiana Silo Company advertised on page 10 makes it a point to have a sufficient supply of silos on hand to fill the orders of those who are late in making up their minds to buy. Catalog, descriptive matter and other information may be obtained by writing to the Indiana Silo Co., 521 Indiana Bldg., Des Moines, Iowa, or 521 Silo Bldg., Kansas City, Mo.

Henry Lefebur , Fairfax, Iowa, sailed from New York on July 29th for Belgium, for his regular fall importation. He will go to France for twenty Percheron stallions and bring them with sixty Belgian stallions and twenty Belgian mares, making 100 head all told. Henry Lefebure has by continuous dealing with his patrons, built up a trade that is equaled by but few in America. See page 24.

J. R. Horswell, breeder of Aberdeen Angus cattle, Estherville, Iowa, announces a dispersion sale to take place October 1st. There will be 24 Blackbirds, 20 Prides, 13 Queen Mothers, 10 Torjan Ericas and 12 Lady Fannies. Two good herd bulls will be included. Later details will be given in these columns.

W. Z. Swallow, the veteran Poland China breeder and proprietor of the Pioneer herd, at Waukee, Iowa, places an advertisement on page 22 in which he announces that he will be at the Iowa State Fair with a collection of spring pigs of the usual quality. This makes the forty-ninth consecutive year in which the Pioneer herds have been represented at the Iowa State Fair. Mr. Swallow invites his old patrons and all who want good stock to call and inspect those to be found in pens 1, 2 and 3.

The John Deere manure spreader in its completed and perfected form is illustrated in a big advertisement on page 7. The John Deere is easy to load. It has big drive wheels, steel frame and mounted beater, and a simplicity which does away with all the trying difficulties that arises from a machine that is intricately built. The John Deere spreader book tells why the John Deere is the best in the field as well as the cheapest. Write for it asking for Book Y-27. Address request to John Deere Plow Co., Moline, Ill.

A. M. Joy, Herman, Neb., one of the well-known Poland China breeders of eastern Nebraska, will make a public sale of Poland Chinas on October 17th, and he will have a splendid offering for that occasion. Andy has a splendid herd and he is one of the best feeders and caretakers in the state. He never fails to have them in good shape when it comes sale time and you can just put it down that you will see a great bunch of boars and sows in his October sale. Remember the date and make it a point to attend his sale.

The farmer who has a good platform scale and weighs his produce before going to market has an advantage in that the buyer is compelled to believe the farmer in the matter of weights. It is unfortunate that conditions make it necessary for every farmer to protect himself in this manner. It oftentimes happens that a farm scale will pay for itself in savings in a single year. Better learn all about the McDonald Pitless scale advertiseed on page 7 getting the information from the Moline Plow Co., Dept. 11, Moline, Ill.

The season for the selection of seed corn will be here in a very short time. As the proper drying and care of corn has an important influence on its growing properties every means should be taken to have it properly cared for at gathering time. The Whiteworth Corn Dryer illustrated in the advertisement on page 7 is a device by which seed corn may be saved to the best advantage. It dries evenly and keeps each ear separate. It is very cheap and may be had at a special price which may be learned by writing to Champion Mfg. Co., Box 4358, Cedar Rapids, Iowa.

F. Bunker, Kilbourn, Wis., breeds double standard Polled Durham cattle and advertises them on page 20 of this paper. Under recent date he writes, saying: "Since February 1, 1913, I have sold from Bunker Hill Farm over fifty head of registered Polled Durham cattle. This month ten head have been shipped, two going to Wisconsin and eight to Nebraska. I now offer for sale four bulls from eight to twenty months of age. Two of these are the equal of anything we have yet produced. One is a roan nine months old and the other a solid red eleven months old. These should go to head pure-bred herds or be fitted for the fall show rings. Those wanting good bulls or cheaper ones can also find some of that sort here. If you come soon we can yet spare a few young Polled Durham females. They have been tuberculin tested, registered and are all right." This herd is one in which our readers may put confidence. Address inquiries to F. Bunker, Kilbourn, Wis.

High-class Galloway bulls, cows and heifers, all strong in the best blood known to the breed, are for sale at satisfactory prices by James P. Sheaffer, Media, Ill., whose advertisement appears on page 21.

S. I. Welch, Cherokee, Iowa, advertises two Duroc Jersey herd boars on page 20. One of these is a very large, smooth yearling, with good head, well-formed head, full ham and excellent feet. The other is Red Col., an extra large two year old with a rainbow back, short dished face and very heavy ham. He is a grandson of Prince of Cols., and also of Tip Top Notcher. He is a breeder of unusual merit. For special prices to close them out quickly address S. I. Welch, Cherokee, Iowa.

Col. D. H. Cunningham, Wayne, Neb., starts an announcement in this week's paper on page 21. Colonel Cunningham is a graduate of the Animal Husbandry Department at Ames, and has had eight years experience in conducting live stock sales. Those of our readers who contemplate holding public sales during the coming season will do well to write to Colonel Cunningham, opposite the Citizens National Bank, Wayne, Neb., for dates and terms, kindly mentioning this paper.

J. C. Wilkinson, Colfax, Iowa, has for sale Shropshire sheep both male and female and of all ages. His advertisement will be found on page 19. There are mature rams, two year olds, yearlings and lambs. Write him for prices or call at his farm. Mr. Wilkinson has usually made an exhibit at the Iowa State Fair, but this year finds the condition of his farm work such as to prevent him from giving an exhibit the necessary time and attention. He will make reasonable prices.

J. M. Williamson, Des Moines, Iowa, made a wonderful showing with his Single Comb White Leghorns at the state fair in 1912. He only made fourteen entries in chicks and took first or second on every bird, first and second on cockerel, first and second on pullet, first and second on pens. All the winners were in his breeding pens this season. Those wishing new blood would do well to look his birds over. He writes: "Judge J. L. Todd was out to our place on August 1st and made the remark that in all his twenty-four years of judging, both at fairs and poultry shows and the thousands of fine flocks he had seen while doing private scoring, he had never seen as fine a lot of 1,200 birds that would come up to them or that averaged as high a score as they would. Seeing is believing. You are invited to come and see them." See advertisement on page 12 of this paper.

The dryness which has affected many parts of the land this year has illustrated the need of a system of cultivation which would save moisture from the immense evaporation and turn it to the growing of crops. The advertisement of the Spalding Deep Tiling machine on page 12 presents a method of plowing which will do away with much dry season danger. One farmer, Fred Bossen, Platte, S. D., bought a Spalding Deep Tiling machine and on July 3d wrote concerning it, saying: "We have had a dry spell lasting five weeks. Taking everything into consideration, alfalfa, spring and fall grain on deep-tilled soil are good. They are at least 50 per cent better than the same crops in shallow-plowed ground. The corn on deep tilling is far ahead of anything around here. The Spalding is particularly valuable to potato raisers." A book which illustrates and describes this machine fully may be obtained by writing to Gale Mfg. Co., Spalding Dept. 68, Albion, Mich.

Hansen's Holsteins.

Hans Hansen is the type of farmer who sees a chance to succeed and is willing to risk his time and money to make a success of his chosen line. Mr. Hansen's herd now consists of thirty-seven pure-bred Holstein-Friesian females. These have been bred mostly to spring Brook De Kol II, that has thirty A. R. O. daughters. The balance of the herd is bred to King Pontiac Dorinda, whose dam held a record of 16.5 pounds as a three year old. Mr. Hansen has three pure-bred bull calves of these strains of blood, which he will dispose of shortly. The farm is located practically in the city of Lake Mills, and is one of the interesting spots of that most interesting city. For any information write to Hans Hansen, Lake Mills, Wis.

Shanks Duroc Jersey Boars.

With this week's issue we begin the advertisement of W. N. Shanks, Worthington, Minn., who owns one of the greatest herds in Minnesota and the Northwest. When we say this we know whereof we speak, because we have not only seen his herd as well as the others and we know what he has been buying. We never knew Will Shanks to buy a poor one, and if you will only inspect his herd he will show you some great boars and one of the greatest collections of brood sows that you ever got your eye on. He has 170 head of spring pigs and it is a great collection. These are bred right and they are as good as you have seen this year. Many of these are sired by Chief Model, a son of the great Golden Model. This boar was a junior champion at Des Moines in 1912, so you may know he is some boar. His pigs are doing fine and he has some splendid spring boars by him for sale. Another boar he has been using is Model Chief's Last, and he has been a splendid breeding boar in his herd, and he also has some good pigs by him. The fall boars that he has for sale and he has some of the best we have seen this season are sired by old Model Chief 2d and Crimson Wonder Again. You cannot go wrong on these boars as they are all right and you had better write Mr. Shanks about them or go

and see them for yourself. When corresponding with him kindly mention The Homestead.

Large Holsteins.

The Holstein herd of C. S. Large, Oakfield, Wis., is one of great promise. His sire is of the De Kol strain, being Madam De Kol's son. This cow is one to be proud of and great things are expected of her granddaughters and grandsons.

Kreitzberg's Duroc Boars.

Twelve good fall boars and twenty-five very choice spring boars are advertised for sale by Lewis Kreitzberg, Griswold, Iowa, on page 20. These are sired by Freed's Improver and Louis' Crimson Wonder and are out of his best sows. He is pricing the fall boars at $35 and $40 and the spring boars at $25. Send him an order for these at once as he has some good ones and they are cheap at the price he is asking.

Wegter Offers Duroc Jersey Boars.

On page 23 Henry E. Wegter, Sheldon, Iowa, offers thirty head of spring boars and seven head of good fall boars for sale. These are sired by Happy Secret, Model Chief I Am, Put's Top Col., Chief Model and Crimson Improver. The fall boars are all sired by Big Wonder and he has some good ones. The price of these is from $25 to $40 and if you order now you will have the pick of the bunch. When writing him kindly mention The Homestead.

Choice Duroc Jersey Boars.

On page 23 Heiko Gruis, George, Iowa, begins his Duroc Jersey advertisement and is offering fifty choice boars for sale at $25 and $30. These are sired by his splendid yearling boar, A Wonder Jr., old A Wonder, Fancy Chief, Model Chief Jr., Cloverdale Prince and G. S. Crimson Wonder. These are out of his very best brood sows. He will book your order now for one of these pigs and you cannot beat it at the price. When writing him kindly mention The Homestead.

Garrett Bros. Offer Real Bargains.

Without question as great bargains in Duroc Jerseys as is being offered may be had from Garrett Bros., Steele City, Neb. These gentlemen have a good herd, built up from good stock and popular breeding, and they have a big crop of spring pigs that they offer at prices that seem real bargains to the writer. They have a choice lot of boars that will be shipped if ordered before August 15th at $20 each. Write these gentlemen immediately and please say that you saw this notice in this paper.

Eggert Horses at State Fair.

Geo. Eggert, Newton, Iowa, has a special announcement on page 24 stating that he will show his Percheron, Belgian and Shire stallions and mares at the Iowa State Fair to be held August 20th to 28th. Mr. Eggert would like to have all interested in good draft horses visit his exhibit at the fair and see for themselves the kind of horses he breeds and imports. He always has a good collection on hand that are for sale at attractive prices. Write him at any time for any information you want and when so doing kindly mention The Homestead.

Clouss' Red Polls.

On page 21, Frank J. Clouss, Clare, Iowa, one of the best known breeders of Red Polls in the state of Iowa and owner of one of the best herds in the West, is advertising seven coming two-year-old heifers for sale. These are bred to his noted show and breeding bull, Ruperta's Goods, a bull that was champion as a yearling and as a calf at the Nebraska State Fair. He also offers a few good yearlings and a number of serviceable bulls. One of these is a September calf, another was dropped in October and one in November. If you want anything in Red Polls write Mr. Clouss or go and see him. When writing him kindly mention The Homestead.

E. L. Busch's Durocs.

One of the real good herds of Nebraska is the Duroc herd owned by E. L. Busch, Syracuse. This herd was founded four or five years ago, and since the very start, none but the good ones have been purchased for breeding stock. Some of the very best sows of the country have gone to this herd and they were in most instances already mated with the best boars of the country. In this way a very select lot of breeding stock has been assembled, and all of it coming from top stock. Mr. Busch is now offering the spring boars at private sale, and they will be sold well worth the money. The writer is familiar with the herd, also the manner in which Mr. Busch does business, and we do not hesitate to recommend him and his stock to our readers. When you write, kindly men- The Homestead.

J. E. Smith's Durocs.

J. E. Smith, Victor, Iowa, the well-known Duroc Jersey breeder, is now in position to sell fall and spring boars that will please his customers. He has some good fall boars sired by Golden Prince, Royal Col. and Victor Col. He has a grand lot of spring pigs sired by Golden Prince, Royal Col., Victor Col., Crimson I Am and Smith's Crimson Wonder. The dams are by such noted prize-winning sires as Kelly's Pilot Wonder, The Professor, Proud Col., Preimer Col., Model Wonder and others. Mr. Smith has in his five herd boars a line of breeding that cannot be excelled. Royal Col. is sired by the noted King of Cols., Victor Col. is a son of Premier Col., Crimson I Am is by Crimson Wonder I Am, Smith's Crimson Wonder is by Crimson Wonder III, and Golden Prince is an Advancer-Golden Model bred boar. Mr. Smith's object in keeping so many herd boars is to be able to breed each sow to the boar that will nick the best, considering both the blood lines and individual merit. Mr. Smith can please you in a good fall or spring boar at a reasonable figure. See page 23 and write him mentioning The Homestead.

Holstein-Friesians for Sale.

On page 10 the Rock Brook Stock Farm, Station B., Omaha, Neb., advertises sixty-five head of Holstein-Friesian cows and heifers for sale, many of which are bred and due to calve in the fall. These are bred to a son of King of The Pontiacs or to Sir Pontiac Ragapple Korndyke, who is sired by a son of Pontiac Korndyke and out of a thirty-one-pound A. R. C. daughter of Pontiac Korndyke. He is the strongest bred Korndyke bull today in the West. These cows and heifers will range from two to seven years. They are making special prices on these for the next sixty days. They also have a few good serviceable bulls for sale. When writing them kindly mention The Homestead.

Gene Fagan, Auctioneer.

Gene Fagan, Marion, Iowa, the well-known live stock auctioneer, had a very successful season last year. He made 153 sales during the season which speaks well for the esteem in which his patrons hold him. He sells all breeds of pure-bred live stock as well as general farm sales. Mr. Fagan is a man who knows values and his methods of conducting sales is to treat both buyer and seller fairly. He has a wide acquaintance and this is a big asset. He has a large number of sales booked, but still has several desirable dates open and would be pleased to correspond with anyone contemplating the holding of a public sale. His terms are reasonable. See page 21 and when writing him kindly mention The Homestead.

Col. L. A. Matern, Auctioneer.

On page 21 will be found the advertisement of Col. L. A. Matern, Wesley, Iowa, one of the best known of the younger live stock auctioneers in northern Iowa. Colonel Matern is well equipped to conduct sales and has been on most of the leading sales in the northern part of the state. He is a well-known breeder of Short-horn cattle, Percheron horses and Duroc Jersey hogs, and has given especial attention to these breeds. He comes before the public with a knowledge of pedigreed stock and he also comes before the public with a reputation for integrity and a hustler. As we have said above he has been employed on most of the leading sales north and these breeders have all been well satisfied with his work. We take pleasure in recommending him to anybody who wants a capable and wide awake auctioneer and we will assure you that you will be pleased with his work. He has some open dates for fall and winter sales and will be pleased to hear from those who contemplate making sales. He also sells real estate and cries farm sales in all parts of the country.

Heisel's Poland Chinas.

J. B. Heisel, Grinnell, Iowa, the breeder of big-type Poland Chinas, has had a successful year and now is beginning to ship out his fall and spring boars for use this fall. His herd boar is Ex Wonder, a three-year-old son of the noted Big Ex that did so much good in the herd of W. H. Cooper, Hedrick, Iowa. Every breeder who sees Ex Wonder admires him. He has heavy bone, is good on his feet and sires large litters of good pigs. Mr. Heisel has the best lot of spring pigs he has ever raised and most of them are sired by Ex Vonder. There are two fall boars by Ex Wonder and out of Modesty Quality and two out of Modesty Queen that are extra good. The low price of $50 each will buy them. They are good-boned pigs, with good head and ear and smooth. He has some yearling and aged sows bred to Ex Wonder and Iowa Product that will farrow from August 10th to November 1st, that he prices at $40 and upward. These hogs have had lots of range, running water and are healthy. Mr. Heisel would trade his yearling herd boar, Iowa Product, for a good spring pig or will sell him for $75. See page 22 and when writing mention this paper.

Wayside Short-horns.

Geo. H. Burge, proprietor of Wayside Farm, Mt. Vernon, Iowa, will exhibit a few good young Short-horns at the Iowa State Fair this year. Mr. Burge has been an exhibitor at the state fair for many years. It has always been his plan to show his herd bulls in nice breeding shape and a few young things in good growing condition. This year he is showing his great two-year-old herd bull, Silver Sultan, a son of the great sire, Scotch Sultan. Silver Sultan is a beautiful roan and will be a strong contender for high honors, though he is not fat enough to show at his best. He is the type of bull that will work improvement in any herd. Two of the heifer calves are sired by Silver Sultan and they are of the right kind and are sure to receive attention in the hands of the judge. There will also be two good heifer calves by Hopeful Knight. Crusader is a good, growthy, smooth junior yearling bull sired by Stanley Bouff, a grandson of Imp. Lord Bouff, and out of a Rosebud cow by Money Musk. The senior calf is a son of Choice Sultan II, a grandson of Whitehall Sultan. Mr. Burge has for sale three good young bulls about twelve months of age. One is a Mysie by Sterling Scottie, one a Raspberry by Hopeful Knight and the other a Nonpariel by Silver Sultan. These bulls are in nice breeding condition and can be purchased worth the money. Look up Mr. Burge's exhibit at Des Moines. Mr. Burge offers his services as a live stock auctioneer to our readers. His twenty years experience in breeding Short-horns places him in position to be of especial value in any Short-horn sale. He has been connected with a number of Short-horn sales during the past year and has rendered excellent services in every instance. If interested in Short-horns or a sale date write Mr. Burge as per his announcement on page 23 and kindly mention The Homestead.

Maasdam & Wheeler's Percherons.

E. G. Wheeler, of the firm of Maasdam & Wheeler, Fairfield, Iowa, is in Europe at the present time purchasing an importation of Percheron stallions and mares and some Scotch Shorthorns. The importation will not land until September and for this reason this firm will be unable to show at the Iowa State Fair this year. The patrons of this firm may rest assured that in the new importation will be a choice collection of horses and cattle. See page 24.

Ground Limestone Increases Fertility.

The intelligent use of ground limestone never fails to give beneficial results. It removes acidity from the soil and liberates fertility, especially in the form of potash. Many practical demonstrations of the good resulting from the use of ground limestone are to be found all over the grain belt. It is cheaper and easier to apply than burnt limestone, and can be stored without danger or loss. On page 12 Dolese Bros. Co., Buffalo, Iowa, announce that they will send samples and prices to any reader of The Homestead who will send name and address.

Some Good Angus Bulls.

H. W. Ehlers, whose postoffice is Roca, Neb., is the owner of one of the good Angus herds of eastern Nebraska. Right now Mr. Ehlers has a few very good Angus bulls that he will sell worth the money. The herd bull was bred by the University of Nebraska Farm, and he comes of a long line of popular stuff. The younger bulls are sired by him. Either the herd bull, or the younger bulls can be bought worth the money. We would suggest that Homestead readers write for the prices at once, and we are certain that they will be found to be very low. Mention The Homestead and address as above.

An Excellent Jersey Bull for Sale.

W. Sidders, Bennet, Neb., has for sale a Jersey bull of most excellent pedigree and is a good dairy type. This bull is a year past, and has been used on some dozen cows by Mr. Sidders. The record back of this bull is gilt edged, and we question if a bull of this breeding and individuality can ordinarily be had for several times the money Mr. Sidders asks for this one. We believe that Mr. Sidders has a better one coming on, hence the other one is for sale. The other one we mention is a calf, and comes with a breeding that has no superiors and he is also a good individual. He will be old enough for service another year, and as there will be use for but one, the older one is now offered for sale. Mention The Homestead and write immediately.

Balmat & Swale's Durocs.

Balmat & Swale, Mason City, and Fredericksburg, Iowa, have for sale a fine lot of spring boars with excellent breeding and individuality. This firm has the best lot of pigs they have ever raised and can please buyers in price and quality. Their boar pigs have lots of size, plenty of length and heavy bone. The pigs are sired by Chief Select Jr. 103747, B. & S. Golden Model 129083, Model Chief Jr. 130319 and C. J.'s Chief 118415. These herd boars are of the most fashionable blood lines and the fact that they were good enough to head these herds is a good recommendation for their value as sires. Any of our readers in need of a good boar should write these men as per the announcement on page 20 When writing them kindly mention The Homestead.

A Wonder is Dead.

It is with sincere regret that we announce the death of that great Poland China boar, A Wonder, on July 29th, and this marks the passing of one of the greatest boars that the Poland China breed has known in recent times. In a letter just received from his owner, Henry Fesenmeyer, Clarinda, Iowa, he says: "I am sorry to say A Wonder is no more, he having died today at two o'clock. I fed him this morning and he seemed all right and I thought him good for a long time. Later in the day he got up and staggered for a short time and dropped over dead and hardly made a struggle. You can say to your readers that in my forthcoming sale will be the last chance anybody will ever get to buy his get. I am selling some splendid spring boars by him in this sale. I am also selling eight sows bred to him not cataloged and I would rather keep the ten head that go in bred to him were it not that I had given my breeder friends the assurance that I would put these in the sale." With the passing of A Wonder we desire to add a word, as we were possibly in as close touch with this boar as anybody excent his owner. We became acquainted with A Wonder when Will Wheeler first secured him for his herd and we were the first to measure him and proclaim him as one of the greatest large-type Poland China boars living. Later on when Will Wheeler made his closing out sale Henry Fesenmeyer wrote us regarding this hog and we advised him to come to the sale and look him over. As soon as he saw him he wanted him and gave us instructions to go on and buy him, as it was the turning point in Fesenmeyer's life as a breeder when he secured him. About this time his get began to come into public notice and breeders from everywhere began to want his sons to head their herd. His daughters were also sought after and there is no question but they were good, until today some of the greatest big-type herd boars in the land and some of the greatest sows in the leading herds are sired by him. Breeders will sometimes differ on the type and the value of a herd boar, but it is universally conceded that Fesenmeyer's A Wonder was one of the greatest sires known to the breed in recent times. Some time ago Mr. Fesenmeyer had secured one of his best sons, in case the old hog might go, and with his other great boar, Big Joe, he will still be in the forefront of the big-type Poland China procession.

Reese's Chester Whites.

On page 24 L. C. Reese, Prescott, Iowa, begins his Chester White advertisement and he is offering twenty choice spring and one good fall boar for sale. The Reese herd is one of the best known in this land. When writing him about these pigs kindly mention The Homestead.

Harms' New Importation.

V. W. Harms, the Percheron and Belgian breeder and importer at Fairbury, Ill., writes from Paris, France, that he has just sent to this country an importation of high-class Percheron mares, including some fine matched pairs of two year olds and some outstanding yearling fillies, the best to be found in France. Mr. Harms writes that all of these horses were bought so that they can be sold at very reasonable prices. His advertisement appears on page 24.

Beckendorf's Hampshires.

On page 20 J. E. Beckendorf, Walnut, Iowa, begins his advertisement of his Hampshires and he will be pleased to hear from any of The Homestead readers who are going to be on the market for a boar or some sows. Mr. Beckendorf is secretary of the Iowa Hampshire Association and he has one of the good herds in the state. He can tell you anything you want to know about Hampshires. Write him your wants at once and please mention Iowa Homestead when doing so.

Brook's Hampshire Swine.

C. A. Brook, Washington, Iowa, will exhibit his herd of Hampshires at the Iowa State Fair this year and will be glad to meet all interested in this popular breed of swine. He will have a full show herd and among them will be some strong candidates for honors. Mr. Brook has a fine lot of spring boars, many of them sired by his prize-winning boar, Joe, that he is pricing worth the money. He has already sold a number and the buyers are well satisfied with their purchases. See the announcement on page 23 and when writing please mention The Homestead.

A Great Herd.

The success which F. J. Bristol, Oakfield, Wis., has had in breeding Holstein cattle should be an inspiration to the young farmers of the United States. Starting in 1893 with six cows he now has a herd of 150 registered cattle. He has made a specialty of breeding and developing the Korndyke family and has produced some wonderful cows. He has purchased several bulls paying $1,000 when calves, and recently sold seventeen head for an average of $310 per head. Among this lot was a bull which sold for $1,000, and a cow which sold for $650. His present herd bull is King Segis Pontiac Polkadot, a full brother of which sold for $10,000 in June, 1911. Mr. Bristol's farm is located one-half mile from the station, and his residence and buildings are in the village limits. He has a large number of fine buildings that are finely equipped. He is now putting in his own power plant, as he expects to carry on testing the year around.

Eakles' Durocs.

S. E. Eakles & Sons, Phophetstown, Ill., topped the recent sale of H. E. Browning on a fall gilt sired by Volunteer and out of Proud Lucy at $315. Messrs. Eakle purchased Proud Lucy in Mr. Browning's sale last December, bred to Volunteer, and has a fine litter from her now. This litter is full sisters and brothers to this top sow and in the litter are some boars of the herd-heading kind. This firm also has the dam of the great boar, Disturber, and she has a fine litter by S. E.'s Premier Col. This litter is extra good and there are a couple of outstanding boars that should head good herds. They also have some good pigs by Cherry Chief, Captain Model, Disturber and others that are ready to ship out. This firm have a herd of sows that is not to be found in many herds and our readers will find this a good place to buy a herd boar that will develop right. See the advertisement on page 23 and when writing them for prices kindly mention The Homestead.

Choice Duroc Jersey Boars.

On page 23 P. W. Weberg, Denison, Iowa, begins his Duroc Jersey boar advertisement and he is offering thirty head for sale. Mr. Weberg owns the grand champion boar, Crimson Wonder 3d, and the 1,000-pound boar, C. H.'s Special, and these two noted hogs stand at the head of his herd. Both of these are too well known to need extended mention as they have made a reputation for themselves that puts them in the forefront of the breed. Mr. Weberg's spring crop are mostly sired by these two noted boars and he has some extra good ones. He has an April litter by Crimson Wonder 3d and out of a Defender sow that looks very good to us and he has several March litters that are extra choice. These are out of the best sows he has and those who have been watching Mr. Weberg's buying know that he has only bought the very best. He has some rather outstanding spring pigs by these two boars and the man that is looking around for a herd boar will find he has some good ones. He also has nine good fall boars. Three of these are sired by C. H.'s Special and are out of a Choice Goods sow. These are June boars and one of these is extra good and will make an unusually large boar. Two others are sired by Crimson Wonder Again, a son of the old and original Crimson Wonder, and he has a good March yearling by Col. Gano. He is offering some special bargains in these fall boars and they are bred along the very best lines. He is also booking orders for good

spring boars sired by Crimson Wonder 3d and C. H.'s Special. When writing Mr. Weberg kindly mention The Homestead.

Irvinedale Belgians at Iowa State Fair.

The Irvinedale Farm, Ankeny, Iowa, will be at the Iowa State Fair this year with a greater collection of high-class Belgian stallions and mares of all ages than has heretofore been forwarded from that institution. Something like forty head will be shown. Every one is a good one. Some are imported and among these are winners in the Belgium shows. Others are home-bred animals that have either been state fair winners themselves or are descendents from state fair winners. The advertisement appears on page 24. Mr. Irvine invites every lover of Belgians to call at his barns. Those who are in the market for stock will find something there worth investigating, or, if they prefer an automobile will be at hand to take them to the home farm where they may investigate a magnificent lot of animals. A few good Percheron stallions will also be on exhibit. Any information that may be required previous to the fair may be obtained by writing to Chas. Irvine, Ankeny, Iowa.

Wm. Retzlaff's Durocs.

The writer called on Wm. Retzlaff, Bennet, Neb., a few days ago, and we wish to say that we saw a very nice line of Durocs on the farm. The Retzlaff herd is one that has been founded of good stock, and has been improved from time to time as good things might be purchased. A two-year-old boar in the herd is Sensation Again by the well-known Wallace's Wonder. Sensation Again is a good big boar and sires fine litters of large numbers. He is doing a good work in this herd, especially are his get very large, and he is sure a large-type boar himself. He will be at the state fair, and while he may not land high up the ladder, yet he is just a mighty good boar. Col. Willeta 2d is the sire of some good fall gilts and a son of Advancer 5th is the sire of some very choice spring pigs. Some of the best things on the farm are out of a daughter of Crimson Critic, and sired by Sensation Again. This sow was a prize winner at Lincoln last season, and it looks as though some of her pigs ought to land well this fall. Mr. Retzlaff has a nice lot of spring boars for sale, and Homestead readers will do well to write him for prices. Further announcements will be made through The Homestead from time to time, kindly notice them.

H. D. Geiken's Durocs.

Among the good herds of Durocs in the central part of Nebraska, we wish to mention the herd owned by H. D. Geiken, Cozad, Neb. Mr. Geiken has been breeding good hogs for a number of years, and this season has near 100 head of spring pigs. The pigs are doing nicely at present and should make a very fine bunch of stuff by early fall. They are mostly the get of Crimson Critic 2d, a son of the well-known Crimson Critic and he by the famous I Am A Crimson Wonder 2d, now owned by Swan & Ellis, of Iowa. The dam of Crimson Critic 2d is Lady Golddust by the famous Watts' Model. This is some of the more famous ones of the Briggs Bros. herd of Seward, Neb., and the way this boar is breeding for Mr. Geiken is certainly good evidence that blood tells. A few of the good breeding sows are by Proud Chief, a few by Fancy Wonder and the greater part of the rest are by King the Col. This is all good breeding stock, and has done well for Mr. Geiken. A new boar has recently been added to the herd. He is from the well-known Putman & Son's herd of Tecumseh, Neb. This boar is sired by Put's Top Col., by Morton's Top Col. This is a good boar and we believe will do well for Mr. Geiken. Mr. Geiken has some very choice fall boars for sale right now. They are the get of Crimson Critic 2d, and three or four of them are fit to head good herds. He is pricing them at farmers' prices. It would be a good plan to write him at once.

A. B. Heckenlively's Polands.

While at Cozad, Neb., a short time ago the writer called on A. B. Heckenlively of that place and spent some little time looking over the Poland China herd. For a new herd it is one of the good ones of the country. It has been built up from good stuff, and real, big stock as well. A number of sows by the well-known breeding boar, Judy's Big Giant, are in the herd and this combination of stuff has done well for Mr. Heckenlively. A son of Hather's Hadley 2d and out of Mr. Hather's great breeding sow, Susie M., by the 1,000-pound Panama Pan by Expansion is in the herd and has sired some extra choice stuff. We are of the opinion that a boar of this type and breeding will be a mighty valuable boar in a few years. Hather's Hadley 2nd is a big boar by Hather's Hadley, by Big Hadley, and he has sired a lot of good, big stuff including the Internatinal reserve champion, Hadley Over. This last-named boar will be at the Nebraska State Fair this season and he will weigh better than 900 pounds, which is not so bad for a two year old. Mr. Heckenlively has another boar that is of the extreme big sort and looks as though he would be wonderfully big. He is Big Orphan's Price by Neuhofle's well-known boar, A Wonder's Price and his dam is Silverthorne by Big Orphan. This is as good big breeding as will be found in the West and from as good a herd as within the state. This boar is just extra good and we believe will develop into one of the famous boars of next year. We believe that with this boar and A. B.'s Hadley, the other boar just described, that Mr. Heckenlively will have a combination that is hard to excell. Mr. Heckenlively will offer boars at private treaty this fall and they are for sale from now on. He will probably make a sale of bred sows to dispose of his surplus sow stock, and announcements of same will appear in The Homestead in due time. If interested in some good spring boars, we would suggest that Mr. Heckenlively be consulted before buying.

Turner's Chester Whites.

In a recent letter from Amos Turner, Wilber, Neb., among other things it is stated that he has completed vaccinating his entire herd of extra choice Chester Whites and that they were doing very fine. Mr. Turner has one of the real good herds of the western states and now that his hogs have all been given the double serum treatment, he feels that he is offering the buyers a proposition that is almost a sure thing. These hogs should be a good investment at any time, but now that he has immunized them they should be even more valuable. Readers of this paper in search of some high-class breeding stock will do well to write Mr. Turner before buying. His advertisement will be found on page 24. Kindly notice it and write at once for full description of the stock offered and mention this paper when doing so.

Hutchinson's Poland China Sale, Last Call.

In making the last call for the Poland China sale that will be made by J. G. Hutchinson & Sons, Crete, Neb., on August 12th, the writer wishes to especially emphasize the fact that this offering is absolutely choice. There will be about thirty head in the sale; all but two or three will be spring pigs, and we must say that every one of them is a good one. Not a cull in the offering, and the blood lines as well as the individuals are first class in every way. The spring pigs are all the get of Hutch's Blue Valley, which as we have before stated in The Homestead, is one of the best breeding boars sent out from the Walker herd in some time. He is also of the very best breeding of this herd, being sired by Blue Valley and out of the great sow, Blue Valley Beauty 3d. The few older sows that will be offered are bred for fall litters to Hutch's Blue Valley, and they are sired by Hutch's Wonder, a son of A Wonder and his dam was Giantess 3d. This sale will sure be the place to buy a few gilts or a herd-heading boar, or a bred sow. The stuff is right, and the season of the year will favor the buyers in that they are pretty sure to secure some rare bargains. If unable to attend, send bids to J. C. Price, representing The Homestead. Direct all letters to Mr. Price in care of J. G. Hutchinson & Sons, Crete, Neb.

Fesenmeyer's Great Offering.

The great Poland China breeding boar, A Wonder, is dead, but the good work that he performed while living is still going on and the sale of Henry Fesenmeyer, Clarinda, Iowa, on August 12th, is full of things sired by him or bred to him. The old boar died on July 29th, and his demise marks the passing of one of the most sensational large-type breeding boars of recent times. Breeders of the big-type Poland Chinas will therefore be impressed with the fact that in this sale will be one of the very last opportunities that will ever be presented when they will have an opportunity to buy boars sired by this great sire or get sows bred to him. There are quite a number of spring boars in this sale that are sired by him and they are good. They are good enough to head any herd in the land and we urge our friends who are going to want to buy a boar to get one of these. There will never be a time when these boars will not be worth more than what you have to pay for them in this sale and that is the history of every A Wonder boar that has been sold when a pig. We gave a detailed description of these boars in last week's issue and will therefore let it go at that. Then there will be ten good sows in this sale that will be bred to this boar and we are emphatic when we say to our friends by all means get one of these sows. He is also cataloging five of the very best spring gilts he has raised this year by old A Wonder and these should be some attractions for the breeders to buy. Another feature of this sale will be the splendid Big Joe sows that he is selling bred to old A Wonder. No breeder ever sold a better lot of sows than these Big Joe sows, and bred to old A Wonder they certainly ought to be sought after by all of our best breeders. There are also some corking good spring boars in this sale that are sired by Big Joe and they will make great herd boars. Some splendid sows go in bred to Big Joe and those who have seen this boar's get will agree with us that Fesenmeyer has in him a boar that is in every way worthy of following A Wonder. The sale is made up of A Wonder and Big Joe boars and sows and it is an offering that we can recommend to all our friends and we will also add that the breeder who does not avail himself of this opportunity to buy some of these will not be doing himself or his herd justice. Remember this is the last opportunity you will ever get to secure this line of breeding. Get the Fesenmeyer catalog at once and kindly mention this paper when writing for it.

NEXT WEEK'S SALE PROGRAM

Tuesday, August 12 { Poland Chinas, J. G. Hutchinson & Sons, Crete, Neb. / Poland Chinas, Henry Fesenmeyer, Clarinda, Iowa.

Wednesday, August 13 { Poland Chinas, J. W. Pfander & Sons, Clarinda, Iowa.

SHEEP

ELK GROVE SHROPSHIRES

I AM offering thirty choice rams for sale. Twenty four yearlings, five two year olds and one five year old, bred by Henry L. Wardwell. Prices $25.00 to $50.00. Address
FRANK RAINIER - - - - - - - - - - LOGAN, IOWA

Our M. T. White will represent this paper at the sale and will care for any bids sent in his care.

Charlson's Milking Short-horns.

Those of our readers who are wanting Bates-bred bulls of the milking strain should get in touch with J. C. Charlson, Leland, Iowa. He has six or seven young bulls coming a year old in October and November that are strongly Bates bred in the leading milking strains and he is offering these for sale at private treaty. He also breeds the large-type Poland Chinas and has about sixty fall boars and sows for sale. Just now, however, he is anxious to sell the bulls and if you want one of these write him or go and see them. When corresponding with him kindly mention The Homestead.

G. W. Damrow's Oxford Sheep.

With this issue of The Homestead, G. W. Damrow, R. F. D. 3, Lincoln, Neb., is starting an advertisement in which he offers for sale a very choice lot of Oxford rams and ewes. Mr. Damrow is a thorough farmer, a good stockman and a business man that our readers will be pleased to deal with. His flock of Oxfords is probably the largest in Nebraska, and in the yearly exhibits made at the Nebraska State Fair, this flock has come off in good shape as regards premiums. The Oxford sheep are of good size, really often of great size, and they are very hardy and good shearers. Fifteen to twenty pounds of a clip are rather the ordinary than the exception, and as they have been bred for many years to meet a high-class mutton demand in the old country, there is no discounting them on the dressing score. They are a very beautiful sheep, possessing a good carriage and a clear black face. Those of our readers that wish further information, or that are interested in this breed and wish some very choice breeding stock that may be had at very moderate prices will do well to address Mr. Damrow. He is located about seven miles nearly south of Lincoln, Neb., and he is able to ship over five different railroads. See advertisement on this page, and when writing, kindly mention The Homestead.

Griffith's Angus.

John E. Griffith, Washington, Iowa, has one of the large herds of Aberdeen Angus cattle in the state. He has enjoyed an excellent trade this year, having sold twenty-seven bulls during the past few months. He has a number of bull calves on hand, a few of which are old enough for service that he is pricing reasonable. Mr. Griffith has good cattle and he makes prices that are attractive and this is why he has been having a good trade. The breeding of his cattle is right and he has been using good bulls. If you need an Angus bull or some females see page 22 and write him mentioning The Homestead and you will be treated right.

D. S. Cochran's Durocs.

With this issue of The Homestead, D. S. Cochran, R. F. D. 7, Lincoln, Neb., starts an advertisement in which he offers a lot of choice Duroc Jersey boars. Mr. Cochran has only been in the business a short time, but his foundation material for this herd has been drawn from the very best herds of the country, and the boars that are now being offered are really very choice. They are sired by two or three different boars. Two early litters are sired by Sensation Again by Wallace's Wonder and his dam is Sensation Girl by Chief Sensation. These litters are from capital sows, being the tops of Wm. Retzlaff's last winter sale. One of them is a daughter of Belle's Prince, his dam being the noted sow, Clay Center Bell, and the other sow is sired by Lincoln Wonder. A very fine litter is sired by J. C. Theobold's boar, Ohio Belle's Crimson by Crimson Wonder Again and his dam being the noted sow, Ohio Belle by Ohio Chief. Ohio Belle's Crimson is just one of the extra good breeding boars of the state today. The remainder of the pigs are mostly sired by a son of Lincoln Wonder that Mr. Cochran used in his herd last season. This was a boar of excellent pedigree, nothing better anywhere and he has sired good stuff for Mr. Cochran. One litter is sired by I Am A Crimson Wonder 4th, considered by Mr. Beem to be the best pig raised last season and sired by the famous boar, I Am A Crimson Wonder 2d. The dams of these pigs other than those already mentioned are sired by the prize winners, Crimson Critic, Watts' Model, Golden Model 5th, Good E Nuff Model and a few other well-known boars. Crimson Critic was first-prize boar at the Nebraska State Fair, 1911; Watts' Model is one of the most valuable sow sires of the breed; East or West; Golden Model 5th has sired some of the best Durocs in Nebraska and Good E Nuff Model is by the "Duroc wonder."

Golden Hoof Stock Farm

OFFERS a few hundred rams of exceptional merit. No better or more noted flock of Shropshires was ever assembled. The Hampshires are of exceptional merit and the Rambouillet and other breeds offered are of the same high order. If looking for the best ever, and at reasonable prices, address
GEO. ALLEN & SONS, LEXINGTON, NEB

FORTY GOOD

ONE, two and three-year-old Shropshire rams. All sired by an imported ram and out of ewes, sired by imported rams. The ewes also directly descended from imported ewes.
DAVENPORT & MACK, BELMOND, IA.

SHROPSHIRE SHEEP

I AM closing out my herd at cut rate prices on account of other business. Have 45 choice bucks, ewes and lambs. Will make a first-class flock for some one to start with. Will sell in one lot or divide to suit purchasers. Address
EARL BLOOM - BRIDGEWATER, IOWA

SHROPSHIRE RAMS AND EWES

YEARLING, two-year old and three-year old rams and ewes of all ages. Some are by imported sires. These are good animals and will be sold at fair prices.
C. J. WILKINSON, R. 2, COLFAX, IOWA

PRIZE-WINNING OXFORDS. Rams and a few ewes. Nothing better anywhere. Address G. W. Damrow, R. 3, Lincoln, Nebraska.

Good E Nuff Again, and he was first-prize senior year boar at the Nebraska State Fair last year. There are also a couple of sows sired by the champion, Valley King, and they are out of a daughter of Golden Model and the dam being Miss Hope, made her a full sister to the Model Queen that sold in Putman & Son's sale for the recent record price of $705. This is the sort of breeding Mr. Cochran has to offer and he is pricing these boars at $25 and $30 each for the month of August. It would be a good plan to order one of these boars at once, as they are pretty sure to move fast. See advertisement on page 20, and mention The Homestead when you write.

Dunlap's Mule-Foot Hogs.

A visit to the Blue Ribbon Stock Farms of John H. Dunlap, Williamsport, Ohio, will convince the most skeptical that the mule-foot hog such as Mr. Dunlap has produced has a great future. On these farms can be found the blue blooded animals of this breed that Mr. Dunlap has improved and brought before the public in the last five years. The commodious central hog house and about thirty individual hog houses set in little fields complete his hog equipment. Mr. Dunlap fits a show herd, and sometimes two herds, annually and sends them out to win in the show rings all over the United States. The spring pigs are now weaned, and are being shipped nearly every day all over the land. There are ten big prize-winning herd boars in the Ohio Blue Ribbon herd, and anyone wanting to make a start with this breed can do so without getting inbred stock. Mr. Dunlap has over sixty big brood sows on his farms that farrow twice every year. These sows have size, hardiness and farrow and raise large litters. Mr. Dunlap will be glad to show his fine herd to all who are interested, and will meet anyone at the train, provided he is notified when to expect them. This herd now numbers 350 head of all ages. Write Mr. Dunlap, mentioning this paper. His advertisement appears on page 24.

Kent's Iowa Herd of Chester Whites.

On page 20 of this week's issue we begin the advertisement of Thos. F. Kent, Walnut, Iowa, the owner of the noted Iowa herd of Chester Whites, and this is just an announcement that he will be at the Iowa State Fair with one of the best herds he has ever had out. He will show Kent's Promoter and Combination I. X. L. at Des Moines and a line of sows that are by far the best he has ever fitted for a fair since he has been in the business. Mr. Kent won nearly 200 premiums with his herd in 1912 at the Iowa, Nebraska, Missouri and Kansas State Fairs and among the ribbons that he won were 32 champions, 68 1sts, 42 2ds, 13 3ds, and 14 4ths, so you will readily see that he was getting his share of the winnings in some of the greatest shows in the country. At this time the Kent herd numbers over 400 head and he has anything and everything that anybody will want in the Chester White line. He has over 200 head of spring pigs now on the farm and these are sired by and many are out of some of his best show winners. Some of these spring pigs are sired by reserved sons of his great old show and breeding boar, Combination, a hog that did wonders for the breed by Ned, first-prize boar at the Iowa and Nebraska State Fairs; White Rock Boy, first-prize boar at the Nebraska, Kansas, Missouri and Illinois State Fairs in 1912; White Rock, one of the largest and heaviest Chester White boars ever used in the West; Little Style, winner of first in a class of forty-four at the Illinois State Fair, 1912, and the great 1,200-pound boar, Sweepstakes, winner of first at Iowa in 1912. Mr. Kent is in position to fill any kind of an order for a boar or for sows. He is in position to fill your order for a good show sow should you want one, or he will sell you pigs of any age. If you want Chester Whites write Tom Kent at once and send him your order, or be sure to see him and his herd at Des Moines and on the fair

Extraordinary Poland China Sale

TUESDAY, AUGUST 12, 1913

At Farm One Mile East of Crete, Nebraska, J. C. Hutchinson & Sons Will Offer the Farm of 19 Acres Which Is Well Equipped for the Hog Business and

Thirty Head of the Pick of the Herd

THESE will include a very select lot, as good as within the state, of spring pigs, both boars and gilts, also a few sows bred for fall litters. The spring pigs are all sired by Hutch's Blue Valley, one of the very best yearlings in use in Nebraska and out of dams by the most popular and best known boars of the breed. Come to this sale if possible or send bids to J. C. Price, representing The Homestead. Col. W. J. Thompson, Auctioneer. See field note in this issue. Address

J. C. HUTCHINSON & SONS - - - CRETE, NEBRASKA

circuit. When writing him kindly mention this paper.

J. C. Droz's Durocs.

J. C. Droz, Fairfield, Iowa, is the owner of the noted boar, Cherry Chief, and also a part owner of the great sow sire, Proud Col. All of Mr. Droz's pigs are sired by these two boars. He has a fine lot of prospects for herd boars, in fact, more than he has had at any time in the past. It has not been his custom to grow his pigs fast until they develop bone and frame and then with proper feeding they develop into boars that are better for the purchaser. Mr. Droz is not offering his pigs for sale, but will have them in ideal shape in about six weeks. His announcement will appear in this journal in due time.

R. B. Baird's Great Columbus Offering.

On Thursday, August 14th, R. B. Baird, whose herd of big-type Polands made famous by the champion boar, Columbus, is so well and favorably known to our readers will hold a great sale at Central City, Neb. The offering will consist of fifty head and will include the yearling show boar, Columbus 2d, twenty-six head of bred sows, including many daughters of Columbus that are prize winners, twenty head of top spring pigs sired by Columbus and three big, growthy boars. The sows will be bred to Oakland's Equal, a full brother to Fesenmeyer's Big Joe. The show records of this herd is familiar to our readers and this sale should attract all lovers of the big-type Polands. Send for a catalog at once and arrange to attend the sale. See page 22 and in writing Mr. Baird kindly mention this paper.

W. E. Willey's Polands.

The writer recently visited W. E. Willey, Steele City, Neb., and we want to say that we saw some spring pigs on his place that are sure extra choice. It seemed to us that a couple or three litters were as good as anything we had seen all season to that time. We have visited all the leading herds in southern and western Nebraska, and we must say that if these pigs keep coming, they will surely give them all a run for the money this fall. However, great changes come over a pig in the course of six to eight weeks, and when they are growthy, sometimes they do not hold out, but in this case we believe they will, for they are sired by the sensational boar of last season, called Skylark. This boar was a winner at Nebraska and was first and junior champion at several western shows, in fact, at every place where he was shown except at Lincoln. Mr. Willey is offering this boar for sale and also some spring stock. Should you write, kindly mention this paper.

Pfander's Great Poland China Offering.

August 13th is the date when J. W. Pfander & Sons will make their great fall sale at Clarinda, Iowa, and it promises to be one of the great sales of the early fall season. When it comes to raising large-type Poland Chinas the Pfanders are strictly in it and they have them as large as you will find them anywhere. They are selling some great spring boars in this sale by old A Wonder, out of that great brood sow Giantess 2d and they will be hard to beat. We gave a detailed description of these boars in last week's issue and we will again say to readers of this paper that you will hardly find anything better this year. They are selling a good young boar or two by their sensational young hog, King of Wonders, and these will show how this boar is going to be as a breeder. Another splendid boar is sired by Big Jumbo 2d and out of Mammoth Giantess 12th, and he will be large enough for anybody wanting extreme size. Another good spring boar in this sale is sired by Big Ben and is out of Miss Amazon, a sow that they secured at the Ed Caverly sale and she was the top of that sale when they got her. The dam of this sow which is one of the largest they have in their herd also goes in and she is bred to the great young boar, King of Wonders. There will be three fall boars in the sale, all of which are sired by old A Wonder and they will make splendid herd boars. The Pfanders are selling a most excellent lot of yearling, fall and matured sows in this sale and the most of these will be bred to King of Wonders. It is generally conceded that this boar, King of Wonders, is one of the most sensational young big-type Poland China boars now before the public and this is the time to buy a sow bred to him. Take it from us that the man that gets one of these sows now will be in the lime light in the future and it will be an investment that he cannot go wrong on. It is a great offering of large-type Poland Chinas from one end to the other. Get the catalog at once and go to the sale or be represented with a bid. When writing for the catalog kindly mention this paper and if you cannot be there in person send your bid to our Mr. M. T. White who will represent this paper at the sale.

A Good Poland China Boar for Sale.

One of the best known breeders of Poland Chinas and owner of one of the extra good herds of Nebraska is J. T. R. Nash, Minden. Just now the point of special interest is that Mr. Nash has for sale a yearling Poland China boar that is of the herd header sort. This boar is said by all that see him to be the biggest yearling in the country, and that he is extra good in all parts. He is sired by the well-known boar, Gold Medal and his dam is a daughter of the grand breeding boar, Chief Wonder. Gold Medal was one of the highest priced sons of the 1,000-pound Gold Metal and he in turn was generally considered the best son of the great Bell Metal and Bell Metal is generally regarded as the very best son of the great and only Expansion. The dam of this boar is one of the best breeding sows in the Nash herd, and Chief Wonder was one of the best sires of his time in Nebraska. It surely runs in the family for this fellow to be a good one, and as he is for sale at a reasonable price, readers of The Homestead should write about him immediately. The Nash herd is full of the blood of Gold Medal and for this reason this boar cannot well be used, otherwise he would not be for sale at any price. Big Hercules is now the chief herd boar of the Nash herd, and is one of the biggest two year olds of the entire country. Will not miss 1,000 pounds on the scale very far right now and has not been fitted in the least. The writer weighed him last spring after he had been used quite a little, had made a fifteen-mile trip in a wagon and still weighed over 800 pounds on the scale. This boar is worth keeping in mind, for we consider him one of the sensational big ones of the year.

Windom's Pawnee Nelson Sale.

On August 22d, Alvin H. Windom, Nodaway, Iowa, will make a public sale of forty head of his large-type Poland Chinas and he is cataloging a great line of boars and sows. Mr. Windom's herd has come into prominence largely through the great boar, Pawnee Nelson, that has been at the head for a number of years. Mr. Windom bought this great boar from J. O. James and after using him for a couple of years sold a half interest to the Williams Bros., and now they own him together. That he is a great boar is no gainsaying, because his get have been topping some of the leading sales of this western country and they have always been good. Few boars today in the West breed as uniformly large and smooth as does this great boar, Pawnee Nelson. We have paid considerable attention to him for the past few years and we have seen some great boars and sows that were sired by him, and now many of his sons are heading the best herds in the West. Pawnee Nelson has weighed considerably over 900 pounds, so you may know he has some size. He is cataloging forty head for this sale and he has drawn upon some of the best sows in the herd and these are nearly all bred to Pawnee Nelson, and they will therefore be excellent sows to buy. He is selling quite a number of fall boars in the sale that are sired by Pawnee Nelson, and we seriously question whether there will be any better fall boars sold this fall than the fall boars he is selling in this sale. We unhesitatingly say that you will find these boars to be good enough to go to the head of any herd and this is saying a good deal for them. However, we will stake our reputation on the fact that you would like these boars if you will only attend the sale and take a look at them, and if you cannot do that risk our judgment on them and send a bid to the sale. One of these, No. 18 of the catalog, is one of the best and he will weigh 400 pounds. No. 32 is also a good one and he will also tip the scales at 400 pounds, and there are several others that will be right in the same class with these. He is also selling a splendid string of young boars and they are all right. His young boar, Windom's A Wonder, is coming along fine and he is selling some good sows bred to him. This boar is going to be one of the largest of all the A Wonders when he is grown out and you will say so when you see him. Some other sows will also be bred to Progression, another big, stretchy boar that he has been using in the herd. Just one more word regarding the class of sows that Mr. Windom is selling in this sale. They are as good as he has got and collectively speaking you will be surprised with the size and the quality of these sows, and you will say when you see them that it is one of the best offerings that will be sold this fall. It will be a splendid place to buy sows, because he has them to sell and as we said above, he is cataloging the very best that he has in the herd. We are sure there will be some great bargains in the Windom sale and we therefore urge our readers who want something choice to be sure to attend the sale or be represented by a bid. When writing for his catalog kindly mention The Homestead, and remember that M. T. White will represent The Homestead at the sale and will care for any bids sent in his care.

A. H. WINDOM'S
GREAT OFFERING
LARGE-TYPE POLAND CHINAS

40 Head---10 Great Fall Boars Sired by Pawnee Nelson, 13 Proven Brood Sows Bred to Pawnee Nelson, Yearling Sows and Spring Boars

COOPER'S SPECIAL 30-DAY BOAR SALE

WE have over **100 head of boar pigs of spring farrow.** We have 25 sows to begin to farrow in 2 weeks. We must have room for them. Hence, for 30 days we are going to sell these boars at prices they will bring on the market next fall, and they will be worth $40 to $100 each as breeders at that time. They are all immunized. We guarantee safe delivery and record them at

25 DOLLARS EACH

They are sired by Big Expansion (the 800-lb. son of the noted Dorr's Expansion), Big Bone 2nd (weighing 900 actual pounds, a son of Big Bone), Chief Leader (weighing over 500 lbs. at 14 months old), and Ideal Chief, and other noted boars. **The dams are sows weighing from 500-lb. yearlings up to sows of over 800 lbs.** If you are in the market for the biggest blood lines, from big sires and dams, send your check, tell us the kind of pig you want and we will send him or return your money. You will not buy such boars, such breeding, at the price again this year. Buy your boar now and save 20 to 50 dollars on him.

W. H. COOPER - - - - - - - - - **HEDRICK, IOWA.**

BIG BONE 2d 161497.

J. O. JAMES' SENSATIONAL PIG BARGAINS

I WILL book orders up to 100 head of spring pigs sired by my half-ton, **Big Orange, Ott's Big Orange,** who weighed 700 pounds on the scales just turned 19 months, **Big Sensation, Big Orange's King, A Wonder Giant** and **Gritters' Best.** All strictly big-type boars and out of extra big, long, heavy-boned matchless sows, many of them weighing from 700 to 800 pounds. These sows averaged 9½ pigs to the sow, many of them 10 to 13 pigs. I want you to write, describing just what you want. It makes it easier to pick the pig that will suit. I am pricing these pigs low for quick sale for July and August delivery, or for orders booked during July, or while they last. Must be bought during this month to get special price on them. Many of these pigs will be worth $100 to $150 by October. You can save from $75 to $100 by buying now. The early buyer catches the bargains. The dams of these pigs are sired by Big Orange, Big Sensation, Pawnee Nelson, Long King's Equal, Big Ike and Longfellow Jr. You can't beat sires, dams, pigs or prices. We guarantee our pigs to be as represented. Let me hear from you at once as orders are coming fast. Mention Homestead when writing. **J. O. James, Braddyville, Iowa.**

Faulkner's Famous Spotted Polands

"Are Leaders of Their Kind."

150 May and June pigs now ready to ship. The special price of $35 single, either sex; $65 pair, no akin; or $90 trio, no akin, will sell them all in the next thirty days. Start right with the kind of our forefathers. Mail your check with first letter. Everything registered.

HOMER L. FAULKNER - Owner Highview Breeding Farm - JAMESPORT, MO.

LAWSON'S SENSATIONAL BIG POLAND CHINA BARGAINS

THE home of the noted breeding boar, **Long King's Equal** (weight 965 lbs. in breeding condition, weighed in the presence of forty breeders). Sows bred to him and **A Wonder's Jumbo** for fall litters. **150 Choice Spring Pigs** that I am now offering at private treaty. Will not hold fall sale and will sell these out privately at less than half the money they would bring in a sale. Now is the time to get your bargain while the good ones are here. Write me at once for description and prices and mention Homestead.

JOHN B. LAWSON - - - - **CLARINDA, IOWA**

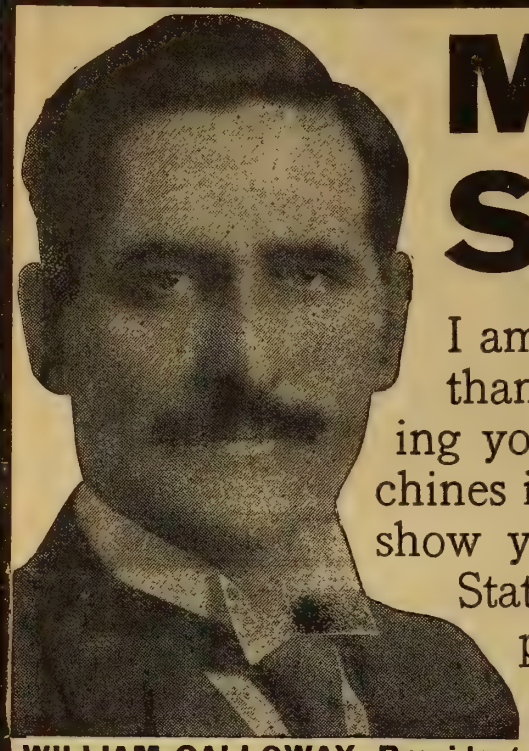
The Iowa Homestead

VOL. LVIII. NO. 33 DES MOINES, IOWA, AUGUST 14, 1913. WHOLE NO. 2914

A WAYSIDE COMFORT



WILLIAM GALLOWAY, President

Meet Me at the State Fair

I am going to give you a bigger treat than ever this year. Besides showing you as usual Galloway made machines in great numbers, I am going to show you (at the Iowa and Nebraska State Fairs—our ground space does not permit at the other fairs) just how Galloway machines are made. Don't fail to see our big exhibit at these fairs.

Here Are the Dates and the Fairs

Aug. 20-28—Iowa State Fair and Exposition, Des Moines, Ia.

Sept. 1-6—Minnesota State Fair and Exposition, Hamline, Minnesota.

Sept. 1-5—Nebraska State Fair, Lincoln, Nebraska.

Oct. 3-11—Illinois State Fair, Springfield, Illinois.

Oct. 13-18—Dairy Cattle Congress, Waterloo, Iowa.

Yes sir, I am going to take you on a trip through the Great Galloway Chain of Factories this year by moving pictures so you can see with your own eyes just how Galloway Gasoline Engines, Cream Separators, Manure Spreaders and other machines are made. This is a free trip. It won't cost you a cent—and I know you'll consider it one of the most valuable features you will enjoy at these Great State Fair Exhibitions. I only regret that I cannot show these pictures at all the State Fairs this year—but at the Minnesota and Illinois State Fairs the ground space that we were able to secure is only sufficient for our regular machinery exhibit—so for that reason alone we are compelled to limit this great feature to the Iowa, and Nebraska State Fairs and the Great Dairy Cattle Show at Waterloo. Just note the dates above and be sure to plan on attending some one of these Great State Fair Exhibitions. I am a believer in State Fairs. I believe they are one of the greatest educational factors in our present-day progress. They are a regular "Six Day" Agricultural Short Course—In fact, you will find there the best of nearly everything that has to do with better living and better farming—Make it a point this year to take in the "Whole Show" and above all don't forget that I've got a treat for you at the Big Galloway Exhibit.

You Have Probably Never Read Any Advertisement Quite Like This Before in Your Life

I don't call this exactly an advertisement, but rather a heart to heart talk to the readers of this paper. I like to now and then, come out and just sort of talk straight from the shoulder with no fol-de-rol or anything of that sort—just plain facts—I am taking this opportunity at this time to call especial attention to my Big Machinery Exhibit which may be seen at the several Big Fairs and Exhibitions mentioned above, because of the opportunity it offers me to make hundreds and thousands of friends that I might not be able to make in any other way. I consider it the great opportunity of my lifetime and I am glad it comes at least once a year to be able to convince many skeptical, conservative business farmers by being able to show my machines right up along side of hundreds of other makes and let you determine for your own self whether or not my claim for high quality goods and low prices are true. Now, then do me the favor this year to compare Galloway made Machines—with other makes—Give me this opportunity to convince you of the high merit of my machines, as well as my unequaled low prices. Let me have this chance to disprove once for all the misrepresentations of my competitors. Isn't that fair?

You know there are men who say Galloway doesn't have any factory—that Galloway Engine crank-shafts are made of cast iron and all sorts of things about me and my goods—and there are men who have believed these false statements. That's why this year I am going to show you not only Galloway Machines, but I am going to show you the Great Galloway Chain of Factories by actual moving pictures. I am going to nail all these lies once and for all time so hard that competition can no longer make them without injuring themselves instead of Galloway.

If you believe in fair play in business then do me the favor this year of letting me show you the real Galloway Factories—just as they are—actual moving picture photographs of the Great Galloway Factories which have been made possible by the loyal support of over 125,000 good, solid American farmer business men.

I Want You to See the New Galloway Low-Down Semi-Underslung Manure Spreader

The very latest product of the Great Galloway Chain of Factories. We have been building and perfecting this new incomparable spreader for the past year—you will have an opportunity to see and inspect it now at first-hand at the state fairs, for the very first time. It's a winner and you can well afford to put off buying a low-down spreader of any other make until you have first had an opportunity to see and examine this New Machine. It is built so simple and so light and strong that you can't help but want one the minute you see it. Yes sir, here is the very latest, most complete and best all-round low-down spreader ever built, for it contains every one of the tested and tried out patented Galloway features of construction. They are simply arranged to meet this new low-down, semi-underslung plan of construction. For that reason you don't take a single chance as you do in buying some of the new untried and untested underslung spreaders.

The New Galloway is a light draft, large capactity, low-down, two-horse machine, with clear cut under front wheels.

If you can't arrange to see it at the State Fair do not fail to write for my new spreader catalog showing it in detail. Will be glad to mail you copy at an early date, postage paid.

Write Me Today for My Catalogs

If you do not expect to attend the State Fairs write me today for my catalogs. You may want a good pumping outfit, then get my new Pumping Catalog. My 1¾ horse-power Air-Cooled Pumping Engine costs only $24.75. My 2½ horse-power Water-Cooled Engine costs only $39.50. If you want a larger size engine get my big Illustrated Engine Catalog showing my complete engine line. My Cream Separator Catalog tells all about the New Galloway Sanitary—just how it is built, what it is made of and everything you might want to know. Let me send you a copy today.

Don't fail to write me first if you are figuring on buying a manure spreader this fall—for I can save you a lot of money. Only $69.50 for my big complete Galloway Spreader.

Get my prices before you buy.

My big General Merchandise book is chuck full of bargains on implements and farm machinery of all kinds. Grain elevators and wagon dumps, litter carriers, and a complete line of house furnishings such as carpets, rugs, clothing, watches and nearly everything for the farm, home and family. It is a book of 1,000 bargains. Write for a copy today.

My New Galloway Sanitary Cream Separator Will Be There for Your Inspection Also

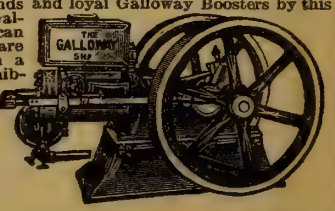
You will have a fine opportunity to compare my New Sanitary Cream Separator with all other makes—that's just what I want you to do—I'll take the chance if the other fellows will. In fact, I have got so much confidence in my New Sanitary Separator that I am anxious to have anyone who is figuring on buying a cream separator this year or next to take advantage of this fine opportunity of comparing the New Galloway Sanitary with the Old-Style High-Priced Separators. If I didn't know that the New Galloway Sanitary would compare favorably with any separator on the market do you suppose I would make this offer? I know it will and I only want you to be convinced just the same as I am. It's the most modern, most sanitary and closest skimming cream separator on the market today.

Again I want to suggest to any reader of this paper that if you cannot attend any of these State Fairs, that you send for my catalog telling all about the New Galloway Sanitary. Do it today.

Galloway Gasoline Engines of All Styles and Sizes Will Be There

You can take your choice of the size or style that meets your requirements best. You will find every size and style of Galloway Gasoline Engines we make on exhibition. If you want a complete pumping outfit, examine our pumping outfits first. If you want the best portable Sawing Rig ever built just look over the Galloway line for we've got just what you want, 5, 6, 7½ and 10 horse-power Sawing Outfits.

If you want a stationary or mounted engine we have them in 1¾, 2¼, 3, 5, 6, 7½, 10 and 15 horse-power sizes. Good, strong, powerful machines, and just as well built engines as you will find anywhere on the market regardless of price. Now, with a hundred or so other makes of engines, cream separators and manure spreaders on exhibition at these great fairs you have an unequaled opportunity to compare the different makes, prices, etc., so you can tell what machine suits you best. Did you ever stop to think of this big feature before? It's really an opportunity of a lifetime to compare all makes of farm machinery and get a first hand knowledge of their merit, advantages, construction and price. I know in making this suggestion that I am taking no risk—because I know Galloway Made Machines will stand this sort of "Acid Test" and come out unscorched. We have converted hundreds and thousands of skeptical, conservative business farmers every year at the State Fairs into friends and loyal Galloway Boosters by this opportunity they have had for direct comparison of Galloway Made Machines with all other makes. We can convert you and simply ask the opportunity. If you are already a Galloway booster we know we can count on a visit from you at our Exhibit. Make the Galloway Exhibit your headquarters—you will be courteously received and are always welcome. Don't fail to meet me and my Loyal Lieutenants at the State Fairs.



Your friend at Waterloo, **Wm. Galloway, Pres.**

The Farm Exhibit Helps Farm and Man

How Agricultural Contests Generate Interest in Farm Affairs and Stimulate Pride in the Production of all Improved Products—By G. S. Ellis

ONE of the most successful and profitable ways in which an individual farmer may put his farm before the public as a place other than to toil, eat and sleep may be mentioned an exhibit of farm products grown on that farm and exhibited at the local county fair or the state fair. Several farmers of this state (Iowa) have to the writer's knowledge made such exhibits and have felt fully repaid for it by the results of which we shall mention later. It is an interesting feature which besides advertising what crops are grown on the farm, gives those not directly acquainted with the farmer some idea of the quality of the products as well. One thing is certain, if properly managed and shown to the best advantage, there is every reason to believe that the farm exhibit will prove one of the most paying propositions of a like nature from more than one point of view.

There need not be much cash outlay to get up such an exhibit, the more simple and free from frills the better, as it should be borne in mind from the start that this is to be an exhibit of farm products and not one of ribbons and artificial flowers. The question may arise, too, whether to exhibit the best specimens of all the different grains and grasses, vegetables and the like which are raised on the farm, or whether to use just good representative specimens of the average quality of the products raised on the farm and only those which are the more common or of economic importance to the farmer and likely to be to those who see the farm exhibit and are likely to want seed, grain, scions from the apple trees bearing such nice fruit or seed of such large, smooth and mature potatoes. This should probably depend upon the principal purpose for which the exhibit is gotten up. If it is for advertising purposes it would be better to exhibit good representative samples of what are actually being grown at home, while if the exhibit is more for competing for prizes for the largest and best exhibit of farm products it would probably be best to exhibit the best of everything grown on the farm if good samples are to be had.

Planning an exhibit of this kind will undoubtedly lead to considerable family interest and pride if the younger members of the family once catch the enthusiasm as well as see the pleasure in helping plan for an attractive exhibit of some of the choicest articles of the farm. The girls or young ladies may offer valuable suggestions as to how the articles should be arranged to make the exhibit the most attractive and to show off all products to the best advantage. The boys can or perhaps will offer their services in hunting for the best specimens of the different vegetables and the young men to selecting good samples of small grains and corn. The pumpkin, squash and watermelon patches will have to give of their best to the enthusiastic specimen collectors and all in all it may mean several evenings of pleasant planning for this perhaps their first attempt at trying to show others what they actually produce on their farm.

Aside from being educational to the family getting up the exhibit, and inspirational as well, there will be an impetus to do still greater things next year. Such an exhibit is likely to bring considerable seed trade to the exhibitor if he is inclined to take care to select good seed and to keep it in good marketable condition. Farmers have learned that as a rule it pays to buy as much of the farm seeds as near home as possible as those from a distance are liable to introduce weed seed and plant diseases foreign to the community as well as being taken from fields of unknown productivity. There should be a greater interest in choosing the best ears of corn from the best stalks for the next year's seed, for a more careful selection of grain and grass seed that the crops from which the exhibit specimens are taken may show as much improvement both in yield and quality as possible and that the exhibit itself may be better than the one used the preceding year. Incidentally the methods of caring for the crops will receive more attention. Fanning the seed, drilling it in after having treated it for smut will eventually be the rule rather than the exception.

The plan of farm exhibits is not all theory, either, since the illustration used in this article is of just such an exhibit actually used at a county fair in Iowa. It illustrates very well just what can be done in a general way to make a very respectable and catchy exhibit, one which will not only cause a passer-by to stop and take a quick survey, but one that will cause him to stop and make a detailed study of the various grains and grasses and vegetables and the signification of such an exhibit.

It will probably be well at least at certain hours of the day for the exhibitor to be present at his booth to answer questions regarding his methods of crop production, to take orders for seed grains, meet new prospective customers and renew friendships with the old ones as well as to be good natured and courteous in general. It might be well to have souvenir post cards in one's pocket to hand out to the people as they stop at the booth using perhaps an illustration of the exhibit itself or of the farm home, its buildings, or good pictures of some of the best animals kept on the farm thus advertising in another way the most important farm activities. If Poland China hogs are raised and Short-horn cattle it would be well to have pictures of some of the foundation animals. These are merely suggestions and may suggest others to the reader who is really interested in this subject.

Along with the souvenir post cards, if the exhibitor is a breeder of pure-bred cattle, sheep or hogs, there is a possibility that handing out booklets put out by the different live-stock breeders' associations advertising the breeds of live stock which are raised on the farm and from which the surplus stock is to be sold may be a good plan. In fact it would be well to use such good pictures of animals now in the herd or those which have been used as will call attention to this branch of the farming activities as well as to the crops and the like. By previous arrangement it might be possible, too, to give out circulars or bulletins put out by the state experiment station on such grains as the exhibitor is making a specialty of, thus giving good instruction as to the best ways of handling these crops after the farmer has obtained good seed either from the man giving this valuable information or from

THE BEST PRODUCTS OF A SINGLE FARM TASTEFULLY ARRANGED.

Des Moines, Iowa.

FARMERS MUST UNITE.

Upon its return from the study of the European systems of credit and co-operation among farmers, the American Commission on Agricultural Co-operation expressed the belief that European countries offer an important lesson to American farmers on matters to credit, production and distribution. Not only this, but European social organizations might be profitably imitated by American farmers, according to the views of this commission.

In its preliminary reports dealing with the question of credit and co-operation among European farmers, the commission says:

The commission is deeply impressed with the vital importance of a thoroughly organized and united rural population. In this respect the countries of Europe offer a lesson which may not long be disregarded in America without serious consequence.

The agricultural interests of most of the European countries visited by the commission are organized along one or more of the following lines: Credit, production, distribution and social organization for the betterment of country life.

Organizations for the provision of credit facilities for European farmers followed the natural division into short-time personal credit and long-time land mortgage credit. The organizations for the provision of personal credit facilities are as highly developed as are the systems of commercial banking. The prevailing rate of interest paid by the farmers for short-time loans is from 4 to 5½ per cent. The terms offered European farmers are generally better designed to meet the peculiar requirements of agriculturists than are the terms obtainable today by the American farmers.

The personal credit organizations have the form of co-operative societies. Very often the members of these societies assume unlimited liability for the debts of the society, while in other cases the societies take the form of limited liability. As a rule in European countries the law makes little or no provision for exemptions of any kind. These short-time credit societies furnish cheap, safe and elastic credit to their members by reason of their control by farmers and are organizations exclusively in the interest of farmers who operate them at nominal cost and without seeking dividend profit to such societies.

The organizations for production and distribution of farm products follow co-operative lines. Farm products are sold by the producer at a relatively higher price and are bought by the consumer at a relatively lower price because the cost of distribution is considerably lowered by co-operative marketing, which results, also, in improving the quality and uniformity of farm products and in promoting more business like methods in farming operations.

It is the opinion of many of the leaders of this movement in Europe that the question of rural credit ought not to be divorced from co-operation for business purposes and the general organization of community life in rural districts. In some European countries visited, agriculture and country life interests generally are thoroughly organized and co-ordinated. The studies of the commission emphasize the necessity or defining the functions, on the one hand of the government, and on the other of voluntary organizations, in promoting the development of country life.

In some of these countries great emphasis is placed upon the value of voluntary associations and such state aid as involves governmental control over the activities of rural organizations is depreciated as tending to stifle the initiative of the people.

We are not looking for any revolution in our financial system as it affects farmers, nor do we look for any permanent good that may come from the wholesale introduction of co-operative methods as it affects production and distribution if all must depend upon the application of European methods to American conditions. We await the complete report of the commission with pleasure and shall from time to time present to our readers such information as we may glean from that report. New policies must find their way into the machinery of our affairs under wise leadership, otherwise all this clamoring after what is European will lead to disastrous ends.

WINTER WHEAT SUGGESTIONS.

According to asubscriber who has been exceedingly successful in the growing of winter wheat, the first essential in preparing the soil is to plow it early. This means that stubble land intended for wheat should be plowed immediately after the small grain crop is removed. Even though the ground is hard, on account of lack of moisture, it pays and pays well to plow it because the lumps will be mellowed by the August and September showers.

If the ground turns up lumpy it will require extra labor with a disk to bring the seed bed into proper shape, but all the work that is put on the surface means that the seed bed becomes firm and thus fitted ideally for rapid root development.

Going somewhat into detail in the matter of soil preparations and the methods of seeding this subscriber says:

Wheat ground may be plowed from four to six inches deep. It is not advisable to plow the ground shallower than four inches. In deep soil, such as creek bottom, it is often best for the farmer to use his own judgment in the matter. A safe rule to follow is to plow the ground deep enough to cover up the weeds and other refuse at a depth so the frequent disking and harrowings which will follow will not drag them to the surface.

After the whole field is plowed it should be disked, then harrowed until it is perfectly smooth and level. From the time the ground is plowed until the wheat is drilled the ground should be harrowed after every heavy rain. This keeps the weeds and grass down and at the same time prevents the ground from crusting.

Wheat should not be drilled too early nor too late. Around September 20th is the best time. Wheat which is put into the ground too early is apt to make too much of a growth before cold weather checks it. Early wheat is also more apt to become infested with the Hessian fly. On the other hand, wheat which is put in too late does not get rooted down properly before the ground freezes. There is danger of late wheat being winter killed.

One of the most successful wheat growers drills in about 100 pounds to the acre. It is essential to plant enough seed to get a good stand. Thin wheat is seldom profitable. The drill should be regulated to put in the seed at a good depth. A good time to drill the wheat is when the ground is just drying off after a rain. To get the best results the ground should be neither too wet nor too dry. It is often advisable to pasture wheat down in the fall when it gets to making too rank a growth. Properly prepared ground, good seed, drilling at the right time and a little attention afterwards will insure success.

The date mentioned by this subscriber, namely September 20th, may be a little too early in those sections where the Hessian fly has been doing damage to the crop and in this case the seeding may be done as late as the 1st or even the 10th of October. On the other hand in the northern half of the winter-wheat belt where the fly has not yet entered, better results on the average are obtained by seeding somewhat earlier than the date mentioned. Taking it one year with another, September 10th will be found to be an almost ideal time to sow, because when the crop is seeded at that time it produces sufficient root development to prevent heaving in the spring, which means that growth will start strong in the spring, a factor that is absolutely essential if maximum results are to be obtained.

THE PRACTICE OF SOAKING GRAIN FOR FEEDING.

A subscriber from Hamilton county, Iowa, appeals to readers of the Homestead for advice relating to the practice of soaking grain. He uses corn, oats and barley in his feeding operations and is undecided whether the extra labor involved in soaking grain results in sufficient increase in the gains to justify the practice or not.

It goes without saying that in the case of barley and oats where these grains are fed to hogs, it will pay and pay well to soak them for a period of twelve, or possibly, twenty-four hours. The only alternative would be to grind the grain and under certain conditions much can be said in favor of the latter practice when ground grain is sensibly fed.

We appeal to our readers for their opinion on this matter of soaking grain, particularly when it is intended for hogs and where such grains as corn, oats and barley are used. Wherever possible we would like some actual records in which the gains on a given bunch of hogs should be cited somewhat in detail and the method of feeding described minutely.

WHEN ALFALFA IS TOO THIN.

The beginner in alfalfa growing seldom realizes the great importance of getting an absolutely perfect stand right from the start. A half stand is practically of no value whatever, and that is why men who have attained just about this success send inquiries to this paper seeking ways and means by which their thin crop can be improved upon.

At this time there comes at hand an inquiry from Minnesota from a subscriber who has had two fairly good cuttings already this year, but is worrying over the large amount of blue grass and white clover that is present in the crop. In this case there is little more than half a stand of alfalfa, and his desire is, of course, to thicken it so that the blue grass will be killed out. This is typical of many inquiries received and we desire to say in the outset that there is only one remedy for a situation like this, namely to plow up the crop and start all over again. It is true that there may be sufficient growth of alfalfa and other grasses to justify leaving it a year or two, but where blue grass once makes a start in a thin stand of alfalfa it may be taken for granted that it will ultimately take possession of the soil. We can recommend no makeshift methods that will successfully supplement the thin alfalfa crop.

Alfalfa in the beginning is a delicate crop and for that reason it requires a very carefully prepared seed bed, one that is not only fine on the surface but well firmed as the result of frequent surface tillage. Where stubble land is plowed, after removing the grain crop, it wll pay and pay well to harrow the surface as many as a dozen times at least before sowing the crop the middle of August, and so much the better if it can be rolled and harrowing alternately, because this method of tillage results in an ideal seed bed. It goes without saying that in addition to perfect tillage methods the soil must be free from acid and the necessary alfalfa bacteria must be present in the soil, otherwise the crop will not make a vigorous growth at any time.

MELLOWING GUMBO LANDS.

In response to our recent request for practical advice from our readers on mellowing gumbo lands, one of our subscribers, W. E. Wagoner, of Saint Francois county, Missouri, submits his plan in the following communication:

Noting your inquiry in a recent issue of your paper concerning methods of dealing with gumbo soil I find it convenient to give the following as an absolute cure for the case:

The cause of the toughness of gumbo or any other soil is inadequate soil drainage. Soil if loamy must have air as well as moisture. The cause of inadequate soil drainage is that soil has been water soaked until it has become cemented and is impenetrable by water. If such soil is drained by tiling it will become loamy and more fertile. The tiling should be placed not less than two feet under the surface and the lines of tiling not more than four rods apart.

Unquestionably the plan here suggested will result in greatly ameliorating or mellowing the character of gumbo land. Soils that are naturally stiff in texture and at the same time are well supplied with vegetable matter become in time cemented as it were, the particles one to another. The passing of water from the surface soil to tile drains tends to cut small channels and this in turn paves the way for the deeper penetration of roots.

The growing of legume crops where these thrive on such soil tends to mellow them, but their permanent improvement must largely be brought about by the plan here suggested. It is true that in many cases soils are so close and tough in texture that drainage water reaches the tile drain very slowly in the beginning, but where a sensible drainage system is put down its effectiveness increases as the years go by.

IS THE FARM AUTO TRUCK PRACTICABLE?

Thousands of motor trucks are being used on the farms of the corn belt. In some cases these trucks are of the combination sort, being useful for what might be called passenger service as well as for hauling farm products. In some instances they are not designed for the carrying of passengers, but are used for heavy traffic only. As inquiries are received from time to time from men who are interested in the various types of motor trucks we are going to ask those of our readers who have had practical experience with these trucks to give the results of that experience through the columns of this paper.

In giving this experience we suggest that the uses to which each particular truck is put be enumerated, its horse power should be stated and if possible the expense in up-keep given, worked out on the basis of moving a given tonnage over a short distance. What are the highway conditions under which the truck is used? In what respect does the truck surpass the horse for certain kinds of haulage?

In addition to the giving of this information it will be a matter of real accommodation to our readers if those having experience with farm trucks will give some practical suggestions on their care and up-keep because we predict that the market for these vehicles will be greatly enlarged in the future and many readers of this paper will become owners of these motors.

THE FILTHY WATER TANK.

There is too much stagnant water used on the farms of the corn belt. It is an every day occurence to find water tanks covered with a green scum from which source comes the entire supply of water for cattle, horses and hogs.

It should be sufficient to simply call attention to the risk that is run in using this kind of water. Digestion troubles invariably result from this form of pollution and it is all brought about thoughtlessly though in some cases it may be the result of an attempt to economize in the water supply. The tank is not cleaned simply because the water must not be wasted at all hazard.

A peck of lime in the bottom of a ten or fifteen barrel water tank will keep the supply sweet though it goes without saying that all tanks should be cleaned out every two or three weeks during the period of hot weather.

Diluted lime water is not injurious to any class of stock, but on the other hand the results of using it are often exceedingly beneficial, particularly so in the case of hogs. Lime is comparatively inexpensive and can be used in this way to very great advantage.

MATURE CORN FOR ENSILAGE.

It is an irreparable blunder to fill the silo with immature corn. In times past the use of ensilage of this sort has in many cases disgusted men with the whole silo proposition. In the first place such ensilage does not have as great feeding value as that made from mature corn and in the second place it is apt to throw stock completely out of condition.

Corn contains the highest percentage of nutrients when it reaches a point where it can be said to be mature. This does not mean that it is ready for cribbing, but it does mean that the grain must be firm and in all probability the lower leaves will be turning yellow. If the fodder is allowed to get too dry the ensilage will not be sufficiently heavy to pack well and that is why the crop should be cut after grain has become well dented but before the upper and middle leaves are wilted. Rather than to make the mistake of putting up corn that is immature one had better use water while filling the silo with fodder that has become somewhat dried out.

We caution those who are putting up ensilage for the first time especially to guard against the storing of the crop while it is in a condition to develop too large a percentage of organic acids.

IOWA WOMEN AT IOWA FAIR.

The Iowa State Fair will offer a splendid outing opportunity to the rural women of the state. The women's and children's building, for which the legislature gave a generous appropriation in its closing days of their session in April, could not be erected in so short a time, but the contracts are all let and it will simply be a pleasure deferred until next year.

However, the directors have made the best arrangements possible to make the days pleasant, profitable and comfortable. Camp life may be enjoyed by those who can arrange to stay longer than a day or two, and it permits visitors to make a leisurely study of subjects holding particular interest. For those who cannot be away from home so long your attention is called to particular subjects and their time of occurence.

The Iowa Mothers' Congress, who are sponsors for the baby health contest, have arranged a program which ought to interest parents, and this will afford opportunity to hear men and women who are well known along their several different lines.

The baby health contest will be held in house tents and it is well worth all the effort made to see children examined for physical perfection and then hear lectures that will reveal the care and method of raising successfully "perfect babies."

Sunday, Aug. 24th, will be given over to religious training and if this does not attract one may find soulful contentment by listening to two well-arranged sacred concerts.

Monday, Aug. 25th, is the red letter day for rural folk, as you will note by the program. Just at this time when there is so much agitation on the school question and good roads it is well to obtain all the information possible that you may understand fully the practical character of such a scheme, the probable cost and the benefits.

Tuesday being old soldiers' day it is pleasing to note that out of deference to these fast thinning ranks, the day and the auditorium will be given over to them.

The governor of the state, Hon. George Clarke, will give the principal address Wednesday. Gov. Clarke displays genuine interest in the agricultural affairs. His plea for the better country schools in his inaugural address had in it a complete solution of the situation, for he argued that if the country boy and girl could not go to better schools, it was time to take the better schools to the country boy and girl.

Other men of high position will add their message, and Mrs. Charles Brenton, the state president, will tell what the mothers' congress is doing.

The culinary department is larger and better than ever. More premiums for the best bread, cakes, jellies, jams, pickles, etc., are to be given to both women and girls. With the best of ingredients to use, country women ought to bring home a greater part of the prizes.

Miss Knowles, of the Iowa Agricultural College, and her corps of assistants will give lectures and demonstrations and the suggestions for the lunch basket is surely timely with school days almost upon us.

There will be new features in the floral department and those who are successful with sweet buds should loiter a while in floral hall and see the contest of arranging the decorations for the luncheon and dinner table.

FACTS ABOUT PHOSHORUS.

In a bulletin recently published by the Illinois experiment station attention is called to the fact that the plowed soil of an acre of average land contains only 1200 pounds of phosphorus as compared with 35,000 pounds of potassium. When the policy of selling grain is followed the draft upon each of these elements is practically the same. When a system of live stock farming is followed more phosphorus than potash leaves the farm.

Thirty-five dollars invested in natural rock phosphate and spread upon an acre of land means that the amount of that element contained in the plowed soil would be doubled. On the other hand it would cost $1,000 per acre to double the amount of potassium contained in the plowed soil of an acre.

Phosphorus can be purchased for three cents a pound in the form of fine ground natural rock phosphate, for ten or twelve cents a pound in steamed bone meal or for twelve to fifteen cents a pound in the form of acid phosphate. According to Dr. Hopkins it can be used with profit in any of these forms, but the results obtained by his experimental work indicate that for a given sum of money invested the natural rock phosphate will give the greatest profit. An application of 1,000 pounds per acre every four years, Dr. Hopkins claims, should be made.

Farmers of the central West must make up their minds sooner of later that the sensible application of phosphorus is after all the keynote of the whole fertility problem.

HOLD FAST TO CATTLE.

The Homestead desires to say just a word to those who are now becoming just a bit disturbed over the present dry weather and who are in a mood to sell off close on cattle, fearing another crop shortage and a reduction in prices for live stock. By all means hold fast to your cattle. In the past ten years the population of this nation has increased 10 per cent, while the cattle population has decreased 30 per cent. This in itself ought to be proof enough to convince any man that there is now a great shortage in beef and that beef is sure to continue high in price.

There are circumstances under which we are inclined to think that almost any sacrifice is justifiable. Concerning cattle, when pastures are so short that stock cannot longer get a living and water fails so it has to be hauled for some distance, a man is readily convinced that he should sell down close on cattle. He cannot see, just then, anything ahead in keeping cattle that must be fed on pasture and that must be watered out of a tank on wheels. Years ago, when cattle were plentiful, the sooner sold under such circumstances the better, but now it is different. With a great shortage to start with, should there be a rush to market because of dry weather, at the wind-up the shortage will be even more pronounced and prices will be higher and higher. To sell now at sacrifice prices is a poor business policy and no man should do it, not even if he has to help the pasture a little with dry feed and has to haul the water that cattle must have.

In time of dry weather there are folks who are inclined to look only for the worst. It does not seem to make any difference how well fixed, financially, a man may be, if he is inclined to look only for the worst to come he is apt to make almost any sacrifice in order to put himself in what he imagines is the best possible condition for going through the dreaded period. He always looks back to those sacrifices with regret, yet he seldom profits by the mistakes of the past when similar conditions arise in the future. There is not a man to be found who does not regret some sale made in the past under stress of dry weather conditions. This refers particularly to cattlemen. They can look back and see that they made a sale when conditions were just at their worst, and can figure a much better deal had they waited a few days or weeks; but let dry weather come again and it is surprising how many of these men will repeat their mistakes of the past. Don't sacrifice cattle now. There is no need of it, except where impossible to obtain water and feed, for the cattle shortage means that everyone who holds on will be assured a high price.

Relation of Climate to Corn

By C. E. Carter, Missouri Agricultural College.

CORN is grown under more widely varying conditions than any other cereal grain. It is grown in every state of the United States, also in Canada and Mexico. But the bulk of the production is confined to the seven principal corn states of the Mississippi Valley—Iowa, Illinois, Missouri, Kansas, Nebraska, Indiana and Ohio. This is due to climatic conditions shown by the fact that there are many other places with equally as favorable soil conditions, but with a climate that is not so favorable to corn growing. Often the soil and temperature are all right, but the rainfall is either not enough or not properly distributed over the long growing season which is required for corn.

Corn adjusts itself readily, though rather slowly, to changes in its environment. Changing the environment will cause three marked changes in the plant: (1) time of maturity and hence the length of the growing season, (2) size and nature of the stalks, (3) yield and character of the grain. According to one writer the rate of the shortening of the season as we go north of a given latitude is, in general, about one day for each ten miles. The reverse is true as we go south.

The length of the growing season is the most important factor in determining the size of the stalk. The long season tends to induce large tall stalks and large yields of fodder and grain. The shorter seasons of the north seem to induce small stunted stalks and smaller yields of grain. The corn grown in the south tends to have large ears with long, deep kernels, which are inclined to be starchy, and have deep indentions. In the north the kernels are shallow, smooth and horny in composition. Corn will change from one of these extremes to the other by a gradual moving in the opposite direction, that is, if north move south and vice versa.

The Nebraska Experiment Station carried on some experiments along this line. They took seed from two varieties, Snowflake White and Iowa Gold Mine, which they obtained from Iowa, and grew them in Nebraska for two years. The third year seed was obtained from the original plot in Iowa and all were planted in adjacent plots in Nebraska. In the Snowflake White variety, the stalk from the seed that had been grown in central Nebraska for two years had decreased almost a foot in height, the ears were 8.8 inches lower on the stalk and the shank two inches shorter with an average of 1.2 fewer leaves. The weight of both stalk and leaf was found to be heavier from the seed just from Iowa. But the proportion of the ear to the stalk was greater from the Nebraska grown seed. The Nebraska corn averaged 200 square inches less leaf surface which was expected in the dryer climate. The yield of grain was in favor of the home-grown seed.

Similar conclusions were indicated from variety tests. Of twenty-two varieties tested by co-operative farmers in various parts of the United States, thirteen were from Nebraska, four from Illinois, two from Iowa, one from Indiana and two from Minnesota. In these experiments not one of the nine varieties from outside the state took first or second average results of the state. This does not indicate that seed from other states is poorer than Nebraska seed, but the low yield is due to the fact that the seed is not at first adapted to Nebraska conditions.

Arkansas also carried on some experiments along this line. In these experiments the object was to test the comparative yields of the same varieties grown at different latitudes. Corn from several different states and from several parts of each state was collected and then divided into three divisions according to the latitude from which they came. Samples grown north of 38 parallel were called "Northern Grown," south of 35 parallel as "Southern Grown" and those between 38 and 35 parallels as "Middle Grown." The latter corresponds to Fayetteville, where the experiments were carried on. All the plots were treated exactly alike.

In many instances the yield of the same variety differed greatly and in some instances the yield from one sample was more than twice that of another though each was grown in approximately the same latitude. The experiments showed that 107 samples of eighteen varieties from seed grown in the northern section yielded 22.79 bushels an acre; 74 samples of twenty varieties from seed grown in the middle section yielded 32.41 bushels an acre; and forty-one samples from seed grown in the southern section 29.5 bushels an acre. This shows that corn will yield better in its own latitude. In every instance the greater yield was obtained from seed gotten within five miles of Fayetteville.

In the production of a corn crop water is of utmost importance. This determines or limits the crop more than any other factor. Corn does not require so much water for each pound of dry matter, compared to other smaller grains, but the total yield of this crop more than balances such a consideration. In a wet season the stalk continues to grow and is more apt to be killed by an early frost. Dry seasons induce smaller growth and earlier ripening.

In growing corn it is necessary that the rainfall be at the proper season of the year. Large amounts of rainfall during the winter do not insure a large corn crop. The peculiar adaptability of the climate of the corn belt states to the growing of corn is due to the greater part of the rainfall coming in the crop season.

Corn makes its most rapid growth during the months of July and August. Therefore during these months, while the corn is tasseling and forming ears, the greatest amount of rain is needed. Usually the amount of precipitation during the month of August will determine the size of the corn crop. Take for example Iowa, one of the best corn growing states. In the year 1903 the rainfall for the summer season was 12.15 inches or thirty-nine per cent of the yearly rainfall; during the six crop months they had 22.48 inches or seventy-one per cent of the total rainfall; during the four critical months—May 1st to September 1st—the average of the state was 16.29 inches or fifty-two per cent of the total yearly rainfall. By these figures it is seen that the bulk of the precipitation comes during the months when it is most needed.

Corn is a semitropical plant and requires a large amount of sunshine and a relatively high temperature as well as a large amount of rainfall distributed during the growing season. According to charts from Iowa, high temperatures and large amounts of rainfall do not run together. This conclusion was reached by averages and probably can be explained by the fact that on a year with a heavy rainfall the temperature would go up and down more, while with a light rainfall the temperature would remain high for a longer period and thus bring the average temperature up.

The average mean temperature for Iowa is 47.5 degrees. During the summer the average is 65 to 75 degrees. The average for the four critical months—May 1st to September 1st—runs from 60.2 to 71.6 degrees. These are the months in which the corn crop is made. For these averages and for the rainfall the same year, as given in the foregoing, Iowa had an average corn crop of 32.05 bushels an acre.

The temperature is discussed above under the "Relation of Climate to Corn" showing how it affects the character of the ear and stalk. It was shown that a larger ear and stalk was grown in the south, the ear having large, deeply-creased kernels and a high starch composition. In the north it was shown that the stalk was smaller and had fewer leaves, the ears smaller, the kernels smooth and very horny in composition.

Corn can be grown under widely varying climatic conditions, but is best adapted to the climate of the Mississippi valley. It is better to plant seed grown in your immediate locality because corn must adapt itself to a locality before it gives the best results. Precipitation was shown to be very important especially the seasonal rainfall. July and August are the critical months of corn growing and the rainfall during these two months determines the corn crop to a large extent. Corn must have lots of sunshine for its best development; also it requires a long season or it tends to be stunted and will develop small ears with horny kernels.

JOHN DEERE
THE SAGLESS ELEVATOR

Your First Chance to Get a Sagless Steel Elevator

John Deere—The Sagless Elevator, is the first portable elevator to have turnbuckles on the truss rods so that you can keep the elevator from sagging.

You know how the power required increases when an elevator once starts to sag. Likewise, you know what a strain sagging throws on the whole elevator, especially the bearings in the head and boot sections.

The John Deere, for the sagless feature alone—even if it didn't have all those other things of advantage—is worth your careful consideration.

The Sagless Feature

Four turnbuckles on the truss rods, together with extra strong section connections make the John Deere a really sagless elevator. Sections are triple-lapped, connected with fourteen bolts, banded with a heavy iron band and reinforced at the upper edge on the inside. That is one big advantage in having a John Deere—The Sagless Elevator.

Screen Section

John Deere—The Sagless Elevator, separates and takes the shelled corn out when elevating ear corn. A screen, in the second section (that can be closed up when elevating shelled corn or small grain) does the work. Shelled corn that gets into the crib with ear corn fills up the air spaces and very often causes the corn to heat or mold.

What Else You Get

ALL STEEL—There is nothing about a John Deere—The Sagless Elevator to rot, dry out, or warp. It is made entirely of steel.

ROLLER BEARINGS on the head and boot shaft reduce the power required. They eliminate friction, thereby lengthening the life of the bearings.

HORSE OR ENGINE POWER. John Deere—The Sagless Elevator is furnished either with or without horse or engine power. A variable speed jack or belt attachment is furnished when desired to operate with engine.

MANY OTHER desirable features on John Deere Elevators are fully illustrated and discussed in the John Deere—The Sagless Elevator book. (This book also illustrates and describes the John Deere Cypress Wood Elevator and the John Deere Tubular Elevator for small grain—the only one of its kind.)

FREE BOOK
A book with which any farmer can save the price of a portable elevator outfit by the way he builds his corn cribs. Read about it below.

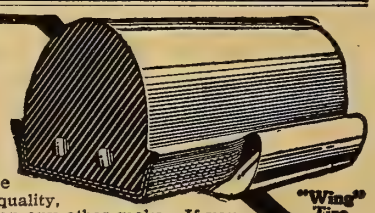
John Deere—The Sagless Elevator Ready for Work

"How to Build Corn Cribs" with Blue Print Plans

Besides containing complete descriptions of the John Deere—The Sagless Elevators, this book has ten blue print plans covering the construction of corn cribs and granaries, showing the style of elevator used with each crib. It also contains cost estimates and furnishes a source of valuable information whereby anyone can arrive at the comparative cost of the various styles of cribs and granaries. You can get it free if you will ask for book No. A 27

John Deere Plow Co., Moline, Illinois

Two Saving Carriage Tires



"Wing" Tire

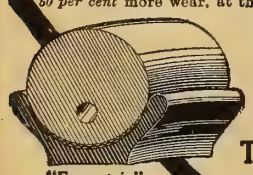
By test the most durable, at the same time the *easiest riding* rubber tires made. Because of quality, these two tires are found on more carriages than any other make. If you want tires that are unquestionably the most *serviceable*—tires that will make your carriage ride easy and safeguard your vehicle against jolts, jars vibrations, insist on

GOODYEAR Rubber Tires
AKRON, OHIO

Last Longest! Lengthen Life of Vehicle!

"Eccentric" Cushion Tire

A light vehicle or runabout tire that gives exceptional service because of the depth of the retaining wire in the rubber. The retaining wire is buried *below* the center—to a depth that insures *50 per cent* more wear, at the same time holding the tire firm in the channel. Not only means more tire service, but greater resiliency—*the easy-riding* qualities for which Goodyear Eccentric Cushion Tires are noted. These tires are made of high-grade, very tough, yet resilient rubber. They are practically trouble-proof, neither cracking, loosening nor splitting, as do common tires.



"Eccentric" Cushion Tire

Our "Wing" Tire

This tire is characterized by a patented "Wing" feature that keeps dirt and grit out of the channel. Damage is thus prevented.

Because of this feature, Wing Tires give about *twice* ordinary tire service. They stay on—wear longer—are amply resilient because of quality of rubber—afford carriage owners with the best tire service that money can buy. Don't accept tires *almost* as good. Insist on Goodyears! Send today for our latest book on Carriage Tires.

FARM FURROWS
TURNED BY A PRACTICAL FARMER

Folks are raising calves off of cows better than they used to do. The oil meal and prepared calf meal we have nowadays helps out skim milk wonderfully, and it pays well to use it, as much as calves are worth.

Mrs. Furrows complains that the price of spring chickens is too low in comparison with the price of other meat. Last week she was offered but eleven and twelve cents a pound for fine yellow-legged Plymouth Rocks, and refused to sell at that price.

An effort is still being made to reduce the cost between the producer and consumer on all the necessities of living, but as yet I cannot see that much reduction has been made. Take the case of the above mentioned chickens, the consumer would likely be called upon to pay three times as much as Mrs. Furrows was offered.

The lone tree standing in a cornfield has taken a big toll this year. I have some that have already taken more from the corn than the trees could possibly be worth for any purpose. A hedge is reaching still further into the corn.

A great amount of the dirt grade is swept off by winds in the form of dust at this season of the year. There is now so much dust that a cloud of it rises behind each auto and rig. Wind carries it off the grade.

A neighbor has five sows soon to farrow. Some years ago I gave up raising summer pigs. I want them to arrive in the spring or long towards fall. August weather, as a rule, is hard on young pigs.

It will soon be time to think about corn cutting. It is time right now to think about repairs for the corn binder, if repairs of any kind are needed. Your local dealer may not have on hand just what you want if you say nothing about it until the day before you are ready to start the binder.

Fine dust is hard on the bearings of a corn binder, and, for that matter, on the bearings of any machinery, but the corn binder usually has to take more dust than any other farm machinery. I use a good, thick oil on my corn binder, and use plenty of it. If there is a bearing that gets too much dirt and dust, try making a leather boot or cover for it.

An evergreen tree, particularly a cedar, when once established can stand a lot of grief and make a good growth. Dry weather has little effect on them but too much manure they cannot stand. Making a stock lot out of the windbreak is a great mistake.

The rattle of a wagon or buggy wheel should be stopped as soon as possible or the wheel will be permanently injured. I dislike very much to have comparatively new wheels "set" by the blacksmith, as every time a tire is shrunk on the wheel is dished. Preventing a looseness of tires by keeping the wheels well soaked with boiled oil is cheaper and better than neglect and frequent tire setting.

Cutting out the muffler is a bad habit for motorists to acquire. Tests show that the increase of power due to cutting out the muffler is so small as to hardly be accounted for in fractions. The muffler cut-out is all right for testing the firing of the cylinders and for adjusting the carburetor, but otherwise it adds only noise to the machine and often frightens horses.

High speed machinery makes farming more dangerous than it was while big muscles were all that was needed to make a success of farming. Corn shredders, silage cutters and other power machines have no respect for "main strength and awkwardness."

The sour smelling swill barrel is not found on as many farms as formerly. This is partly due to the fact that we are slowly learning to know that the hog prefers clean food and a clean place to eat it in and partly to the fact that a sour smelling swill barrel is no longer tolerated near a well regulated home.

Never strike a milk cow with anything heavier than your fist if you strike her at all. Investigate and remove the cause of her kicking and if this cannot be done, sell her. Life is too short and feed too precious to be wasted on a kicking cow.

The claim that owning and driving an automobile will make a man young again must have some truth it it. If we are to judge by the driving of some auto owners the owning and driving must have turned them into ten-year-old "kids" again.

The tongue truck on the binder no doubt adds a little to the draft of the machine but it more than makes up for this by taking the jar and weight of the tongue off the horses' necks. The trucks made especially for the binder give better satisfaction than to try to make the pulverizer truck do the work.

It is an easy matter to write down on paper just how to put up grain shocks that will stand up and shed water, but it is not so easy to go into a field where the grain was lodged and "make good."

There are different ways of building stacks that will shed water, but the real good stacker is the one who can build a stack that will settle so as to give a better slant to the bundles until the outside makes a perfect roof. Learn the "knack." It is easy to learn and pays well.

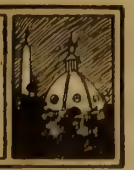
CURRENT EVENTS



PRESIDENT Wilson makes it plain that he will not recognize the Huerta government in Mexico, thus refusing to put a premium upon assassination and treachery. The proposal that Huerta resign, and a provisional president be appointed until the October election, has been turned down by Huerta himself, who shows no intentions whatever of relinquishing the office he obtained by the assassination of the duly elected president and vice-president. Ambassador Wilson is strongly in favor of recognizing Huerta, but President Wilson is even more firmly opposed, and the president holds the whip hand, inasmuch as he determines the foreign policy. The president has accepted the resignation of Ambassador Wilson, who is out of all harmony with the administration and who has been guilty of criticising his chiefs and their actions in newspaper interviews. Rather than appoint a new ambassador in the unsettled condition, the president appointed John Lind, former governor of Minnesota, as his special representative to go to Mexico, investigate conditions, try to conciliate the opposing factions and tide matters over until the October election. President Huerta immediately announced that he would not receive Gov. Lind, unless he came as a regular ambassador and prepared to recognize the Huerta government, giving rise to a situation which Senator Bacon, chairman of the foreign affairs committee in the senate, publicly declared to be the "gravest in years, much greater than confronted us when the Cuban question was here." The situation is now so critical that developments of the most serious nature may be expected almost any moment.

WITH the opening of the Panama Canal come complications in the long established Monroe doctrine which promise to develop into critical situations. Not long ago this government learned of the plans of a European government to obtain control of the canal site and rights in Nicaragua, which led to Secretary Bryan's proposed treaty with Nicaragua buying the exclusive rights to the canal site and to an important naval base in the Bermudas, while Germany and Denmark are both proposing to strengthen their West Indian holdings and figure more prominently than ever in both commercial and governmental affairs in Central America and the islands thereabouts. Under the Monroe doctrine the United States denies to any foreign nation the right to intervene in any of the neighbors of this country, giving to the stars and stripes exclusive control over the United States and guardianship over the adjoining nations. The Monroe doctrine would be assailed by any foreign country entering into a treaty with Nicaragua, for instance, for canal rights and grounds, while Great Britain's proposal to establish an important naval base so near to this country is an infringement of the American policy which has stood unassailed for so many years. The foreign situation, as confronted by the Wilson administration, is extremely critical and while no hostilities may be expected, it is a time for nice diplomacy, the effects of which will be felt for many years to come.

THE secretary of the treasury, Mr. McAdoo, has ordered between $25,000,000 and $50,000,000 of the government funds deposited in the national banks of the West and South to facilitate the movement of the crops. Federal, state and municipal bonds and commercial paper will be accepted as security for the money, on which the banks will pay two per cent interest. The motive of Secretary McAdoo is to anticipate the money stringency in the late summer and fall, which invariably accompanies the marketing and movement of crops, especially when they are unusually large, as the harvest now forecasts. The additional deposits will be placed with the national banks in the two or three principal cities in each of the states were harvesting now is in progress and where the demand for money for moving the crops most conveniently can be met. The secretary said it would not be practicable to scatter the deposits among the smaller cities, especially in view of the character of the securities necessary. The banks will be required to return the money to the public treasury when the crops have been moved. The present suggestion is that fifteen per cent be repaid in December; thirty per cent, in January; thirty per cent in February and twenty-five per cent in March next.

TO DESTROY WEEDS IN WALKS OR DRIVEWAYS.

It is a rather tedious process and hard on tools to remove weeds or grass from walks by hoeing or cutting them out between the stones, but there are a number of chemicals or sprays which can be used with good success.

1. Take one pound of salt to one gallon of water, boil and apply while still hot, or dry salt may be used and then watered in, but this will color the walk more or less and is not quite so effective.

2. Crude carbolic acid, a half ounce of the liquid to one gallon of water will also destroy ants.

3. Sulphuric acid, 4-5 ounces of the acid to one gallon of water. Best applied with a wooden pail.

4. Take one pound of powdered arsenic to three gallons of cold water, boil and stir well. Then add seven gallons of cold water with two pounds of sal soda.

5. Lime and sulphur. Ten gallons of water, tweny pounds of quicklime and two pounds of flowers of sulphur are boiled in an iron vessel. After settling, the clear part is dipped off and used when needed.

There are also a number of commercial weed killers in the market which can be bought at seed stores. Applications of weed destroyers should best be made on a hot day or right after rain, with a watering pot (sprinkler), and one good application is usually sufficient for the season. As the most of them contain poison, either arsenic or acids, great care should be exercised in handling them. —[Julius Erdman, Colorado Agricultural College, Ft. Collins, Colo.

The census bureau recently issued a "gloom" statement regarding turkey culture. According to its report, there were 6,584,865 turkeys on farms in the United States in 1900 and only 3,688,708 in 1910. The number of ducks decreased with almost similar speed. In 1900 there were 4,785,810, while in 1910 there were only 2,906,525. The geese, never plentiful, have gone more slowly. In 1900 there were 5,676,788, and last year there were 4,431,980. Poultry is doing well. In 1900 about 233,566,021 graced the poultryman, and in 1910 the number of the feathered tribe had increased to 280,345,133.

Tire Prices Down

Now the Costliest Tires—No-Rim-Cut Tires Cost You No More Than Others

Goodyear No-Rim-Cut tires used to cost one-fifth more than other standard tires. The reasons are told below.

These tires, despite that extra cost, came to outsell any other. As our output grew the cost came down.

Now you pay no more for No-Rim-Cut tires than for any other standard tire. Yet notice what you get.

Rim-Cutting Ended

You save in these tires all the ruin of rim-cutting. And that's an enormous item.

We had public accountants lately gather statistics. They examined thousands of ruined clincher tires—the old-type hooked-base tires. And they found that 31.8 per cent had been discarded for rim-cutting only.

That's almost one in three.

No-Rim-Cut tires, made by a costly method which we control, end that loss completely. That we guarantee.

Save Blow-Outs

We give these tires the "On-Air Cure." That is, they are final-vulcanized on air bags shaped like inner tubes.

That's to save wrinkling the fabric.

All other tires are vulcanized on iron cores alone. The fabric often buckles. And that buckled fabric leads to countless blow-outs.

This "On-Air Cure," which we alone employ, adds to our tire cost $1,500 per day.

Save Loose Treads

We use another costly method to prevent tread separation. The rights to it cost us $50,000.

Millions of dollars have been lost to tire users through the loosening of the treads. No other tire in the world employs the effective method we use to combat it.

Yet No Extra Price

You get all these savings in No-Rim-Cut tires. All these features used by no one else. Yet no other standard tire today costs less than No-Rim-Cut tires.

The reasons are mammoth output, new factories, new equipment. In one item alone—in overhead cost—we have saved 24 per cent.

Another reason is that we keep our profits within 8½ per cent.

Judge for yourself if tires lacking these features are worth the Goodyear price.

Our dealers are everywhere.

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LAW OF NEGLIGENCE.

No one is legally responsible for an injury caused by inevitable accident, even though such injury is the direct consequence of his conduct and the injured party is free from blame, but, as a general rule, a person is liable for all injuries caused by his negligence. Negligence is a word comprehensive enough to include nearly every breach of duty which is not intentional. In a legal sense, negligence is almost synonymous with carelessness. It means about the same thing. It signifies the want of care, caution, diligence or discretion of a person who may, nevertheless, have no actual intention of doing an injury. A person guilty of negligence and liable therefor may have no purpose to do a wrongful act or to omit the performance of a duty. There may be simply an absence of due care or skill. Negligence differs from fraud, because in fraud there is always an element of intent, whereas in negligence the element of intent is lacking. Where a wrongful intent exists the act ceases to be merely negligent, and becomes a fraudulent act. Fraud is a deceitful practice or wilful device resorted to, to deprive another of his right or do him some injury, but in negligence, whatever may be the grade of it, whether slight, ordinary or gross, there is no purpose to do a wrongful act or omit the performance of a duty.

A person becomes liable for damages on account of injury caused by his negligence when he omits to do something which a reasonable and prudent man would do, or does something which such a man would not do under all the circumstances of the case. The law imposes duties upon men according to the circumstances under which they are called upon to act.

As a general rule, a person who is injured by the negligence of another cannot recover damages if he by his own negligence or wrongful act contributed to the injury; that is, helped to produce it. But where the injured person is without fault or blame he may recover damages, although an act of his own contributed to the injury. For instance, suppose a railroad train is about to collide with another and a passenger seeing the danger jumps off the car and is injured. Here his own act contributed to his injury; indeed, it seems to have been the immediate cause of the injury, yet if the collision were caused by the negligence of the railroad employes, the passenger can recover damages from the railroad company.

If a person is driving a team on the highway and by reason of his carelessness the team runs away and injures persons or property he is liable for the damages, but if the runaway is not the result of carelessness he is not liable. Where a team is hitched and gets loose and runs away, it may be inferred that there was negligence in fastening the team. Where a horse or team is not properly hitched, and becomes frightened and runs away because of negligent hitching the owner is liable for the damage resulting from the runaway. Where a person knows his horse is accustomed to runaway, it is negligence for him to leave the horse unhitched in charge of a boy who is unable to manage him.

Persons who have the care, control and custody of animals are, with the owner, liable for trespasses and injuries done by the animals under their care. The owner of animals is liable for all injuries they do which are caused by the carelessness of his servants or employes while they are in charge of such animals under their employer's orders, or within the scope of their duties.

The owner of animals is under a legal obligation to restrain them from trespassing upon the lands of other persons, and every man has a right to keep trespassing animals from his premises, but he must use no more force than is necessary to drive them off, and he must not drive them farther than is necessary to keep them from his premises, else he may be liable for injury to them. If he finds animals trespassing, and inflicts wanton and unnecessary injury on them, he is liable for damages.

LAW QUESTIONS CONSIDERED.

STREETS AND ALLEYS—OUTLAWED CLAIM.

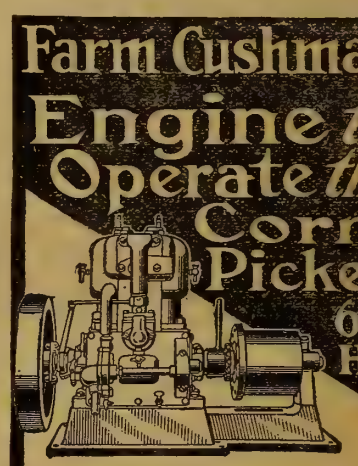
A Subscriber, Lewis, Iowa.—Forty years ago I bought twenty-five acres of land in this place. Streets and alleys were laid out through the land, but they have never been used and the land has been fenced and used as a farm ever since I bought it. The town council now proposes to sell the streets and alleys. Can it lawfully do so?

Answer.—The town council cannot lawfully sell the streets and alleys. Whatever right or claim the town may have had to them is barred by the statute of limitations.

LIFE ESTATE—GUARDIAN—REPAIRS.

A. L., Hopkinson, Iowa.—A and B were husband and wife and lived in Dubuque county, Iowa. They had six

Farm Cushman Engine to Operate the Corn Picker 6-8 HP



Three Horses are all You Need

Drive the machinery with this lightweight, high-power Farm Cushman Engine. Horses simply draw machine. You can stop the horses in heavy corn and husking rolls will not fill up. Weighs only 320 lbs.

Ideal power drive for hay presses, feed grinders, sawing, silo filling and all 4 to 8 H. P. work.

Throttle governed. Just enough gasoline is measured out for the "load"—no more. Quickly detached for any other farm power work.

Operate Your Corn Binder with a Cushman 4 H. P. The Original Binder Engine. Weight, complete, 167 lbs.

For Ensilage Cutting and all heavy work get a Cushman 20 H. P.

MOLINE PLOW CO.
Dept. 11 MOLINE, ILL.

children. B died and A married another woman who had several children by a former husband. A had no children by his second wife. Several years ago while living with his second wife he made a will by which he left her a sum of money and the right to live in his house and use the furniture during her lifetime and dividing the rest of his property equally among his six children and the property left to his wife during life, to be divided equally among his six children at her death. Nothing was said in the will as to who should keep the property in repair or pay taxes and insurance. (1) Whose duty is it to bear such expenses? (2) A had his son appointed guardian. About four years ago this son moved out of the state of Iowa. Can he still continue to be guardian and if not what steps must be taken? A died about seven years ago.

Answer.—(1) The widow who has a life estate in the house and furniture is required to make such repairs as will preserve the property from decay, and to pay taxes on it during her lifetime. She is not required to keep it insured, but may do so at her own expense. (2) The son could be removed as guardian because of his removal from the state, and a new guardian appointed by the district court upon application thereto.

LEASE BY ADMINISTRATOR.

Mr. H. A. Woods, Ulysses, Neb.—Last winter I rented eighty acres of land in Seward county, Nebraska, from the administrator of an estate, who signed a written lease contract for two years. He has since resigned as administrator and a new one has been appointed. One of the heirs wants to farm the eighty acres next year and he claims that the change of administrator makes my lease good for this year only. This heir is not of age and was considered by the first administrator as incapable of farming the land in a proper manner. (1) Can I hold the farm for two years according to the lease? (2) If the controversy should be taken to court will I need a lawyer?

Answer.—(1) Under the law of Nebraska an administrator is entitled as such to possession of the real estate till the estate is settled, and may rent the same and receive rental therefor, but he is required to settle finally in one year, unless the court grants him further time, therefore he would have no right to rent land of the estate for more than one year unless authorized by the court to do so. You should see the new administrator and have him get an order from the court approving the lease from the first administrator. Unless you do this you are liable to have to vacate at the end of this year. (2) If the controversy goes to court you will need a lawyer.

DEED TO TAKE EFFECT IN FUTURE.

M. L., Rochelle, Ill.—Parents in Illinois wish to give their real estate to their children and still retain the use of it during their lives. Can they do so without making a will?

Answer.—Parents can make a deed to their children, retaining a life estate in the property for themselves. They should have a competent and reliable lawyer prepare such a deed.

ADOPTION OF CHILD.

An Iowa Subscriber.—I was a grass widow with two boys, one four years old and the other two. I was unable to support them and had them adopted in two separate homes. The older boy was and is well cared for. The younger was adopted by a Mrs. P., a professed Christian, who represented her husband to be sober and all right. They had the adoption papers made out in Nebraska and signed by the county judge. I signed them in the home of Mr. and Mrs. P. The papers stated that I was in the court when they were executed, but I was not there. I soon found out that Mr. P. was in the habit of getting drunk and that his wife misrepresented the facts. Later I married Mr. D. P. and his wife moved to Kansas and Mrs. P. died and Mr. P. married again. I went to Kansas to see my boy and found him dissatisfied and he wants to come home and Mr. P. is not a proper person to have the care of him. Mrs. P. is willing for me to have the boy, but Mr. P. refuses to let him go unless I pay him $400 or $500 for supporting him to the present time. How can I proceed to get the custody of my child?

Answer.—If the child was regularly and legally adopted you cannot recover it, but your statement indicates that the adoption might not have been lawful. The law of Nebraska requires both parents to sign and acknowledge a written consent to such adoption, relinquishing their right to the child. You should have a Nebraska lawyer investigate the records. Possibly the easiest way would be to make the best compromise you can with Mr. P. He is entitled to some compensation for supporting the child up to this time.

HUSBAND AND WIFE—PROPERTY.

A Subscriber, Dupree, S. D.—I have a homestead claim in South Dakota and I have proved up on it. I want to borrow money to pay my debts and have to give a note and mortgage on the claim to raise the money. (1) Can I compel my wife to sign a note and mortgage? (2) My wife stayed only five months on my claim. She will not live with me, and wants to get a divorce. Can she claim any part of my homestead?

Answer.—(1) You cannot compel your wife to sign a note, and mortgage on your homestead, but you can give a mortgage on it without her signing it. (2) In case your wife should get a divorce, the court might allow her alimony out of your property, but if she does not get a divorce, she cannot claim anything from you except the right of support.

PASTURING PUBLIC ROAD.

A Subscriber, Wentworth, S. D.—A and B own adjoining farms and a public road runs between them. The road is fenced on both sides. A wishes to herd his cows on the road for pasture and B objects to it. Has A the right to pasture the road?

Answer.—A has no right to herd his cows on the public road. The grass and pasture growing on that part of the road which runs over B's land, belongs to B, and A has no right to it whatever. A is entitled only to the grass and herbage which grows on the part of the road taken from his land.

SELLING OR TRADING GLANDERED HORSE.

A Subscriber, —,Iowa.—A traded to B a horse which was diseased with nasal gleet in the last stages. A represented that the horse had distemper only, and would be all right in a week or two. A cleaned the horse's nose and the next morning its manger was plastered with a white mucus matter that stuck to everything it touched. B asked A to trade back, but A only laughed at him and refused. The horse had been traded twice before. The horse is in the first stages of glanders and is a deadly menace to man and beast. What is the law upon the subject and what remedy has B, if any?

Answer.—The law of Iowa provides that any person who sells, trades, or offers to sell or trade a horse having nasal gleet, glanders, or button farcy, shall be fined not less than $50, nor more than $500, or imprisonment upon conviction therefor. B can also sue A for damages and recover whatever he can prove he suffered by reason of A's false representations about the horse.

TILE DRAIN ACROSS HIGHWAY.

Mr. J. E. Harper, Vinton, Iowa.—In The Homestead of June 19th your answer as to tiling across the highway seems to me to be wrong. On page 380 of the Code of Iowa, sections 1964-1966 plainly state that the townships must pay for tiling across the public highway.

Answer.—The sections of the code to which you refer, sections 1964-1966, provide substantially as follows: When any watercourse or natural drain crosses any public road and the adjoining land owner wishes to cross said road with an underground tile drain, he shall notify the road supervisor in writing, specifying the depth of drain and size of tile to be used and give the road supervisor twenty days to construct the same and the supervisor is required to do it and pay therefor out of any money in his hands. If he fails to do so, the owner may construct the drain and receive pay for the same. As you will observe this law only applies to a case where a watercourse or natural drain crosses the road and does not apply to the case mentioned and answer given in the Homestead of June 19th. In that case no watercourse or natural drain crossed the road.

COLLECTION OF NOTES AND INTEREST.

A Subscriber, Dexter, Iowa.—In 1908 I bought some sale notes which were payable at the bank here and drew 8 per cent interest from date if not paid when due. One party did not pay his note when due, but paid the principal shortly afterwards and I still have his note. (1) Can I collect the interest with interest thereon added each year? (2) When would this note be outlawed? (3) Another note for $300 was signed by a man and his wife who lived and now live in another state. This note was dated February 1, 1908, and was due in one year, and payable at the bank here. Nothing has been paid on it. How long can I let it run before suing on it? (4) Must I sue on it in Iowa, or in the state where the makers live?

Answer.—(1) You can recover the back interest up to time note was due, with simple interest thereon from that time—not compounded. (2) Ten years after the note was due. (3) By the law of Iowa the note would be barred in ten years after it is due, but if the makers of the note have no property in Iowa and cannot be found there you would have to sue them in the state where they live, and as you have omitted to say what state that is, we do not know when it would be outlawed. This answers the fourth question.

You'd Buy The LOUDEN Make, of Course

And the price—well that is a pleasant surprise that awaits you. The cost is so moderate that Louden Carriers will soon pay for themselves, by the saving of labor, of feed, and the elements of value in the manure.

Why Not Economize in the Barn as Well?

Any barn equipment purchased today, will be an improvement over the equipment of yesterday—the old kind with deep mangers, the filthy floor, the rigid stanchion—but why not get the best at the same price.

Louden Stalls and Stanchions and Litter and Feed Carriers are as well made as many clocks. Every joint is fitted perfectly with Louden dust-proof malleable connections; there are no cracks or crevices to catch dust; and for strength, Louden Equipment will stand the wear longer than your barn.

You Should Buy Louden Stalls and Stanchions Because They

Align the cow to the gutter, keep her clean and save the bedding.

The cow can swing her neck nine inches in any direction and scare the flies off her rump with her head.

The cow can get down and up without danger of scratching her knee or brisket. Every part of the curb and stanchion is round.

The cut-out manger curb makes it possible for the cow to have her throat within ten inches of the floor when lying down. It also makes possible high manger curbs on each side. This prevents loss of food, as many cows nose a portion of their rations out.

The manger partition makes it possible for each cow to be fed the required amount each meal, and it is impossible for her neighbor to eat a portion of it. **No half-fed or over-fed cows in Louden Stalls.**

Every piece of metal equipment is galvanized or painted inside and out with the best quality aluminum paint, insuring against rust.

Be Ready for Frosty Mornings---You'll Need Feed and Litter Carriers Then

Have Louden Litter and Feed Carriers installed before cold weather, that you may cut down the exposure necessary in doing the feeding and cleaning.

There is no carrier made today that is operated as easily as is the Louden. A boy of twelve is prepared to do all the heavy work in the barn if he has a Louden Carrier. You can lift forty times as much with a Louden Carrier lifting device as you can with just your strength.

The peculiar construction of the Louden Carriers gives them strength and they will outwear any other carrier to be bought today. So well has the work of operation of the Carrier been distributed on the various parts, that there is little strain on any particular piece of the mechanism, no matter how heavy the load.

See Louden Machinery Company Exhibit at the Iowa and Other State Fairs

Valuable treatise on barn building, by Agricultural Department of The Louden Machinery Company, will be given each visitor at the exhibit.

Exhibits of The Louden Machinery Company will be made at the following state and interstate fairs:

Connecticut,	Nebraska,
Illinois,	New Jersey,
Indiana,	New York,
Iowa,	North Carolina,
Kansas,	Ohio,
Michigan,	Oregon,
Minnesota,	Tennessee,
Missouri,	Wisconsin.

See your dealer or fill in the coupon and mail it today. We will mail you handsome books giving facts and figures of vital importance to every man whether he owns one cow or a thousand.

HINTS·SUGGESTIONS·DEVICES

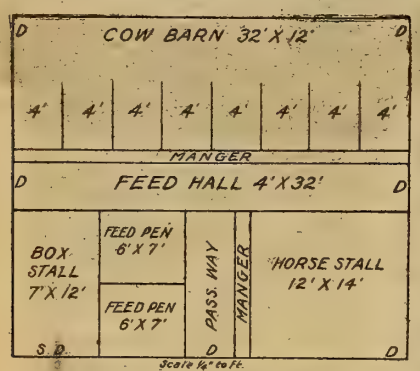
WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

FOR FEEDING SALT AND ASHES.

The accompanying engraving shows a simple, convenient and economical self-feeding device for keeping a supply of salt and ashes before hogs. It is made of twelve-inch boards and may be made of any desired height. The front board is set up from the floor or bottom board about two inches and back from the front about four inches at the bottom. A four-inch slit across the trunk at the bottom makes a box into which the materials fed gravitate. The form of construction affords protection from the weather. The box may be fastened against the side of a building or to a post set for the purpose. Salt and wood ashes make an excellent mixture and, in a measure, are said to be protection against worms. Any other materials of the same sort may be fed instead.

Cow Barn Plan.

Noticing a request for a small barn plan, I am sending a sketch of one I should build if I wanted one of that



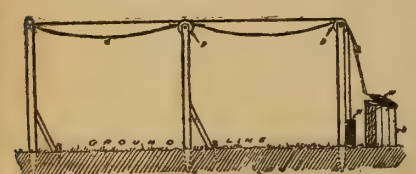
size, writes a Missouri subscriber, Mr. Andrew White. The foundation should be of concrete and should be plenty high so as to have room above. I would make the foundation at least two feet above ground, more would be better, thus saving the timbers from the manure, and use sixteen feet siding. The sketch is self-explanatory.

To Keep the Clothesline Tight.

Anything that will tend to lighten the labor of the housewife on washday ought to be given special attention, and here is a kink that will be of great assistance in helping her hang out the clothes after washing them, writes M. Coverdell, of Missouri.

Set three posts equal distances apart. Attach the clothesline to the first. On top (or near to the top) of the other two fasten common pulleys, passing the line through them. Fasten a good-sized weight to the other end of the line, arranging it so it will just be free of the ground while keeping the line good and tight.

When it is desired to hang clothes on the line, lift the weight (w) and

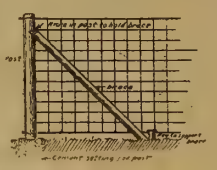


place it on the box (b), which slacks the line till it is considerably lower and thus more convenient to reach. The plan not only keeps the line tight after the clothes are hung out, but yielding of the weight when a strong wind blows the cloths, avoids breaking of the line, which so often occurs where the line is securely fastened at each end, nor is the wind as apt to tear the clothing as on a perfectly rigid line.

Unless the two posts are braced as shown in the illustration, they will loosen and pull toward the post where the weight is attached, causing frequent adjustment of the weight, finally falling completely over. If a good, smooth surface is arranged for the line to work over, on the center post, the pulley on this post may be omitted.

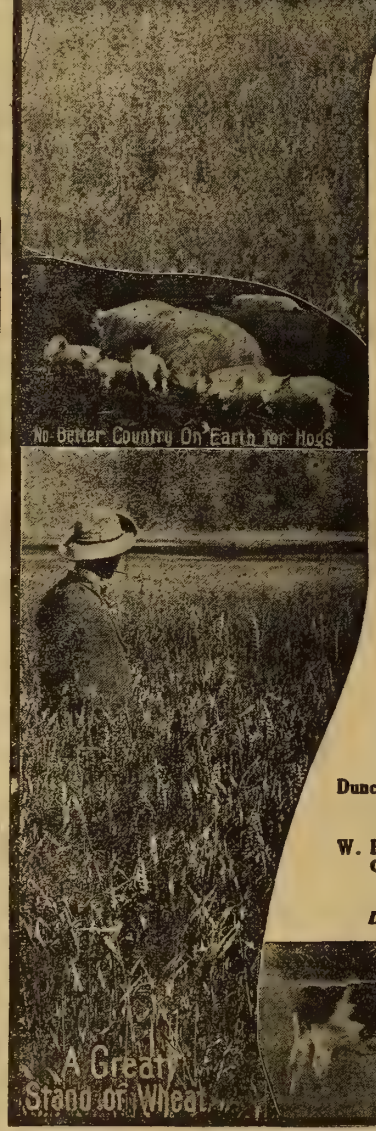
Fencing For Sheep.

The sheep corral is an important place to fence, for it should be built strong enough so if the herd should stampede they will not be able to tear it down. The corral for sheep is often made of field fencing at the bottom, and several strands of tightly stretched barb wires at the top. Smooth posts such as cedar or split walnut are the best for high corral. Set them firmly and brace the corner posts very securely. Illustration shows how to brace. To make a good fastening at the corners of a sheep corral, or any fence, bring a length of wire back from the front of the post so it will extend clear around it. Then lap these wires at the other side. The wires may also be stapled. A gate which swings from a tall guide pole is the kind for a sheep corral. Fix something to fasten the gate to when it is open. Otherwise the gate is apt to swing to at the wrong time when the wind springs up suddenly. Fasten a gate of this type with a chain and hasp.



When hay is put into the bale at the rate of ten tons a day, one gets over the ground lively, as light as the yield is this year, if the bale crew is kept busy. Beginning Monday morning among the mowers and quitting Friday noon, we sheared the grass off eighty acres of land, and this Saturday noon will see the last bale in the barn.

Harvesting a Magnificent Crop of Western Canada Oats—Yield 115 Bushels



—as usual

Western Canada's Crops on Top!

So great big PROFITS are practically certain for Western Canada farmers this year. Crops in the best agricultural states are far from satisfactory. But in the Canadian West CROPS NEVER WERE BETTER THAN NOW. And don't forget what an enormous crop we had in Canada last year.

Wealth's waiting for you here in the richest soil on earth. Come and take up FREE or LOW PRICE LAND, break and seed it and harvest the finest and biggest yield grain crop you ever raised. Money here in stock—horses that equal Kentucky's best, dairy and beef cattle that are champions of the earth, hogs that bring enormous profits, poultry, too, all these make wealth in Western Canada. A farm home and independence are waiting for you here. Raise any and everything you like—grain, stock, dairy products, vegetables, small fruits, poultry—whatever makes you money where you are now will make you *more* money if raised in Western Canada. Learn all about this.

GET OUR FINE ILLUSTRATED BOOKS Given By Officials FREE

Let us show you how YOU can trade each wornout acre you now own for *ten* rich virgin acres that will yield you enormous crops. Learn all about our good markets, fine towns, schools, churches, homes, stores, banks and railways—best of all learn how in Western Canada YOU can make five to ten times the return in money farming that you are now making. Come to Western Canada. GAIN A FORTUNE.

FREE Homesteads and Low Price R. R. Lands

The Canadian Government is making free grants of 160-acre homesteads to every adult male applicant. These lands will produce without fertilizers 25 to 45 bushels of hard wheat to the acre—highest quality and biggest yielding wheat on earth! Or you can buy land near railroad, $11 to $30 an acre for finest grazing, mixed farming and grain lands—20 years in which to pay and *your farm will pay for itself.*

Galloway's Famous Pumping Engines

Wm. Galloway, Pres.

Get My Special Engine and Pump-Jack Combination Offer—NOW! Yes, sir. Do it today. Don't wait a minute. Just sit right down and drop me a postal and say, "Galloway, send me your special pumping engine offer." I am out after the pumping engine business and I am going to get it because I am making the best pumping engine outfit ever made and selling it at a price never before equalled. You can't imagine the number of uses you can put one of these little engines to until you see my **Special Pumping Engine** catalog. It's something new and different and I have a copy waiting for you, free. Just write me for it without fail today. Don't wait until your windmill blows down or the calm hot days get here when the windmill won't run and you have to toil and sweat pumping water by hand for a lot of live stock. No, sir; don't do it. Be prepared. Get my catalog and special offer. That's the first step. Then—

$24.75 And Up

I'll Save You $25 to $300

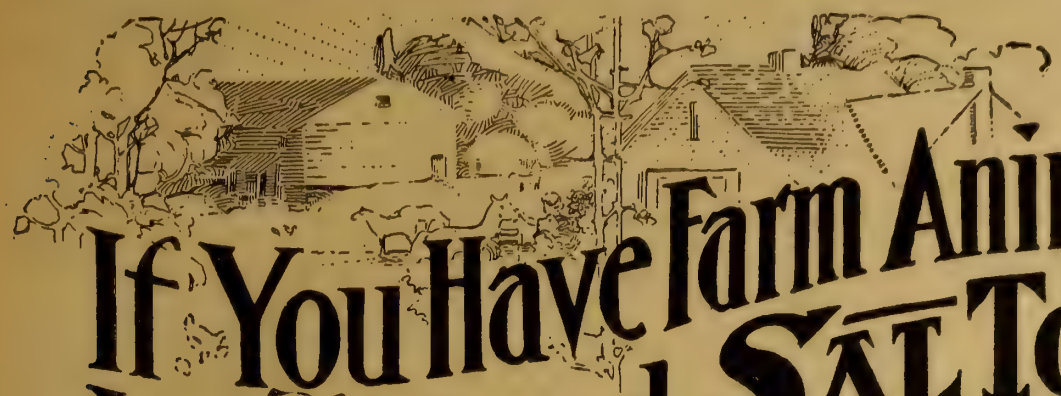
on the first cost alone. I'll save you $25 to $50 on the best pumping outfit made. On my larger engines I can save you as high as $300 and more. Remember, we make engines in sizes from 1 3-4 h. p. up to 15 h. p. My 1 3-4 h.p., air cooled, little "Boss of the Farm" engine sells for only $24.75—an unheard of price. The same style of engine at your dealers costs from $45 to $65. Now, that's just a sample of what buying direct from Galloway means in money saved. Get my special pumping engine offer right away. Write today.

Write Today for My Catalog and Special 1913 Business Proposition

Here's a final clincher. My 1913 Special Business Proposition. I've got a new plan which will help you get your engine partly or entirely without cost to you in the end. No canvassing, no soliciting, no agent's proposition, for we don't sell through agents—but just a straight business offer. Will give full details when you write me. Send for special pumping catalog—offer—and my new bed rock engine prices. Don't lay this paper down and forget it. Write me now. Address me as below:

Wm. Galloway, Pres., **WILLIAM GALLOWAY CO.** 15K Galloway Station Waterloo, Iowa

FREE Service Department. When it comes to help or information for proper installing to get the most profit out of your engine, just call on my Service Department composed of engine experts. Think of it. I not only save you money right at the start but put at your disposal a corps of experts who will tell you how to install your engine, size pulleys to use with different machines, anything, in fact, you may want to know, and this service don't cost you one cent. It's just another advantage you get when you buy of Galloway.



If You Have Farm Animals You Need SAL TONE

Send Today for This Package and try 60 Days at our Risk

Simply Mail Coupon Below

More Than $25,000,000.00 Loss Annually from Worms

The Department of Agriculture of the United States Government states that the loss to our farmers and live stock growers, from intestinal worms and parasites is enormous—that twenty-five million dollars a year is a very low estimate of the amount.

What Is Your Share? How big a chunk of that twenty-five millions comes out of **your** pocket? You don't know, do you? Neither do we. But if you have any farm animals at all—hogs, cattle, sheep or horses—it's nine chances to one that **you are paying a** part of it, because **nine** farm animals out of every **ten** are infested with worms. You may not see them; you may not believe they are there. But they are there just the same, clinging to the stomach and intestines, sucking in the food and growing fat, while the poor animal half starves, always hungry, but never full, growing little, eating its head off, costing you more than you will get out of it if you sell it, and perhaps getting sick and dying on your hands. You will never lose another dollar from worms after you begin using SALTONE.

SAL TONE TRADE MARK

Is a Wormicide and Conditioner

that is **guaranteed** to remove all stomach and intestinal worms. It drives them out, and as long as your animals have free access to SalTone, it keeps them out. Your animals take SalTone just as they would salt and it is no trouble for you to look after. SalTone is an old and proven remedy, used for many years by Mr. John E. Robbins, the president of this company upon his stock farm in Decatur county, Indiana. Mr. Robbins, whose portrait is shown on this page is well know throughout the country as a large and successful breeder of fine horses, cows, hogs and sheep. Much of the success of Mr. Robbins in raising prize-winning stock, and profit-paying stock, is doubtless due to his constant use of SalTone on his stock farm. SalTone is not an expense but an investment. One penny's worth will do a hog or sheep twelve days, or a horse or steer four days.

Letters Like These From Farmers Who Know, Come to Us Every Day

"I am sending for my third 100 lbs. of SalTone since August. I have a car of April farrows ready to ship, weighing about 240 lbs. My hogs never wintered better. I have fed SalTone long enough to know it is well worth the money, and I will recommend it to my neighbors." Earl Royler, Atlantic, Iowa.

"Enclosed find $5.00 for the 100 lbs. SalTone. I got good results and will buy in larger quantities this spring."
Hermann Broders, Stockton, Iowa.

"I want to say it is all you claim for it and I have not had a sick animal since I commenced to use SalTone. It sure removes the worms and keeps stock in healthy condition. I recommend it to all."
Oscar Robards, Robards, Ky.

"I am more than satisfied with SalTone. I consider it the best stock tonic on earth. Every stockman should have a supply."
Fred N. Greiner, Branchville, Indiana.

"SalTone is surely great. I saved a bunch of 30 hogs, that certainly would have caused me a loss without it. I would not do without SalTone as long as I had a hog on my farm."
Louis Kautz, Higginsport, O.

"Enclosed find check for SalTone. My hogs did better this winter than they have ever done before. E. E. Douglas, Converse, Ind.

"The best stock tonic I have ever used, and I will never be without it again."
Henry Meyer, Shattuc, Ill.

Iowa State Fair

See the SalTone exhibit and the show herds of Hampshire hogs from the SalTone Stock Farm. Come around and let's get acquainted.

Try SalTone 60 Days at Our Risk

Send the Coupon—No Money We want to send you on approval 100 pounds of SalTone (or more) and give you 60 days to test it out. Give it as directed and at the end of that time tell us your experience. If it does not do as we claim, it will cost you nothing but the nominal freight charge. If it does, it will make you ten, perhaps a hundred times its cost. Don't take chances but **try** SalTone, because you risk nothing. You have everything to gain and nothing to lose. We leave it to you to say whether it does all we claim, and there will be no kick from us if it fails. Sign and mail the coupon **today.**

SalTone is compounded under the direct supervision of John E. Robbins, whose portrait is given above. Mr. Robbins has been for thirty years a well known and successful breeder of live stock. See his herd of Hampshire Hogs at the Iowa State Fair. These hogs practically cleaned up everything in sight at the Chicago International last year.

SalTone Prices: 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs.; $9.00; 300 lbs., $13.00. No mail orders filled for less than 40 lbs. SalTone always sold in "trade-mark" packages—never in bulk.

Ask your dealer for SalTone. If he cannot supply you, we will ship direct.

QUALITY COUNTS

"A SEIPPEL BUILDING IS A LIFE-TIME BUILDING"

Don't Build With Low Grade Lumber

The true test of lumber is in the durability of your building. But you don't want to find that out **after** you've paid your lumber bill. Our lumber is cut in the right way, at the right time; is thoroughly seasoned; carefully selected—graded higher than lumber sold in the local Line yards. **It's the "quality-quantity" kind.**

There's nobody between you and the mill to manipulate the grading and to collect extra tolls for which you get nothing.

You can build easier and quicker with our high grade lumber than with poor stuff, because it's easier to work up good stock than poor stock. With our immense supply we give exactly what you want and need for your house, in quality and dimensions—no "seconds" or "substitutions." And remember—**the price is right.**

Every Shipment We make is Subject to Inspection

on arrival and guaranteed to be exactly what you ordered. If you're not satisfied, we'll refund all your money promptly. We want your patronage, of course, but we want your good will and confidence much more. That's the way we've built up our big business and held thousands of customers for nearly 30 years.

You get quick service. Dubuque is a better distributing point than Chicago, St. Louis, Minneapolis or Kansas City, and freight rates are so low that we can **save you money even on a small order.**

If you're going to build a house or barn and need as much as a carload, come and select it yourself. **We'll refund your railroad fare both ways.** Our big yards are piled full with well-seasoned, bright, fresh, smooth stock—the most complete stock in the middle west.

SEE OUR SILOS—We are selling the best Guaranteed Silo on the market, and really save you a considerable sum of money. Our silo has the Latest Important Improvements that you ought to know about.

Write us for particulars and state what size Silo you expect to use.

Our **Dux-Bak Rubber Roofing** is Seippel quality, the best ready roofing on the market at a lower price and longer guarantee than any other.

These prices and guarantee periods are convincing:

1 ply, 35 lbs. per square, only.....**$1.15 per square** Guaranteed for 5 years

2 ply, 45 lbs. per square, only.....**$1.40 per square** Guaranteed for 10 years

3 ply, 55 lbs. per square, only.....**$1.70 per square** Guaranteed for 15 years

We have a Complete Stock of Mill Work

Anything you may want in the way of Sash, Doors, Stair or Cabinet Work, and the same High Quality that characterizes our lumber will be found in our mill work, and Quick Service as well as Right Prices are always assured you.

Give us a memorandum of what you want and we will gladly quote you prices; or send your building plans for our estimate.

Peter J. Seippel Lumber Co., 204 So. Locust, Dubuque, Ia.

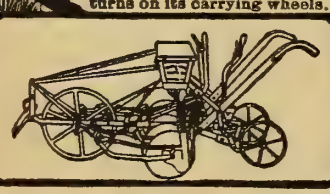
ANGLE OF DISCS NEVER CHANGES

No drill has quite such convenient advantages as our **Peoria 5-Disc Drill.** Here's the most prominent one. You can change the width between rows by moving an easy-to-reach lever and yet not alter a bit the angle of the discs. You know as well as we that this helps to insure even depth and uniform sowing. Another point; the

PEORIA 5-DISC DRILL

turns on its carrying wheels. It saves your strength; no lifting, no tugging. Whole machine turns in its own length—5 feet. That's another convenience. Depth of furrow is easily regulated. Sows all kinds of grains, large or small as well as peas, beans, corn, etc., without clogging or crushing seed. Can be fitted with grass-seed attachment. Write today, Mr. Farmer. Let's get acquainted. We'll send our free catalog and see that you get one of our drills without trouble to yourself if your dealer doesn't handle our line.

NO MATTER HOW WIDE OR NARROW THE ROWS



PEORIA DRILL & SEEDER CO. 2435 N. PERRY ST. PEORIA, ILL.

HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

SAVING GARDEN SEEDS.

To the Editor of The Homestead:

The saving of money effected by raising our own garden seeds may seem small, yet most farmer-gardeners pay out each year a good sum of money for garden seeds—money that could be saved with very little trouble. For a large family garden the annual seed-bill is not inconsiderable, and a saving of several dollars can generally be effected each year by saving a portion at least of our own seeds. Then, there are several other points to be considered in the connection of saving our own seeds. First, we know how old the seeds are when planted, which it is impossible to be sure of when we buy; it so often happens that the seeds we buy will not grow. Parsnips and salsify seeds, for example, as purchased, are very uncertain. If more than a year old they will not grow, but by selecting two or three perfect roots of each vegetable and growing seed from them, the product will be first-class and its age will be known. The second point of advantage in saving our own seeds is this: If we have a good variety of any vegetable it is possible to keep the seed of it pure, and even by careful selection to improve it.

The trouble of saving seeds is very little, particularly of the varieties that seed the same year planted, like beans, peas, tomatoes, cucumbers, etc. For the root plants, as turnips, parsnips, salisfy, etc., it is necessary to winter over the plants and plant them out the following spring in good, rich dirt, and seeds as good, and often better, than can be purchased will be produced. Select as nearly perfect specimens as possible.

Now is the time to begin saving seeds from this year's crops. The seeds should be harvested as soon as they are sufficiently matured to insure their keeping through the winter. All seeds should be cleaned and then placed where they will dry readily and thoroughly, it is not necessary, however, to clean garden seeds so thoroughly as the seed purchased if it is to be sown by hand. Sown with the chaff it is just as sure to grow, but if there is much chaff due allowance must be made for the additional bulk, as it must be sown more thickly. As soon as the seeds are perfectly dry they should be put into paper bags or fruit jars, labeled properly and put away in a dry place where dampness will not reach them. If put away in paper bags they must also be protected from rats and mice. Beans and peas should be treated to keep the bugs out. The simplest effective method of doing this is to pour boiling water over the seed, which first has been placed in a thin layer over a screen that will allow the water to drain off at once, so that the germ of the seed will not be injured.

Cucumber, pumpkin, squash, watermelon and tomato seeds require more care than most other seeds as they are encased in a slimy covering and, consequently, are hard to get clean. They will dry all right spread on paper or a screen, and when dry most of the dried slime can be rubbed off between the hands. But if it is desired to clean them fully, wait until the specimens are very ripe, then scrape the seeds and pulp into a jar half full of water. Keep this in a warm place for a few days and the pulp will ferment and rise to the top, while the seeds will sink to the bottom of the jar. The pulp and water can then be poured off, and when the seeds have been washed they are clean and ready to be dried. Such seeds require careful labeling because they are so much alike in appearance.

Pea, bean and sweet corn seed are costly even in bulk. These can be grown at a much less cost than purchased seed. Beet, radish, turnip and lettuce seed are easily grown in the garden also. The beets and turnips are selected in the fall and kept over winter, being planted out early in the spring. The point to bear in mind in saving radish seed is to save only that produced by good-sized radishes. Radishes going all to tops and no roots come from sowing seed saved from plants that have been grown too thick.

Lettuce seed is not difficult to grow by the gardner. When the gardner gets hold of a variety that just suits him, it will pay him to let a few plants go to seed, and be sure to gather the seed when ripe. He can thus make sure of having just the lettuce he

Seed Corn Dryer That Every Farmer Can Afford

Guaranteed the simplest, most practical, most satisfactory dryer on the market. Thousands now in use. Sold at a price that every farmer can afford.

$1.50 Each, Shipped Prepaid

Nothing like it on the market. Inexpensive, $1.50 each, capacity 200 ears; 3 for $4.25. Sold on 30 days' trial. Money back if not satisfactory.

Ertel's Cyclone—3-Stroke Self-Feed Hay Press Bales with least labor

WILL BALE 20 TONS OR MORE A DAY AT COST OF ONLY 40c A TON.

Make big money baling for your neighbors after yours is done.

The Cyclone is powerful, durable, repair-proof—made almost entirely of finest steel. Unbreakable steel baling chamber, adjustable tension, makes smooth, clean, tight bales, 75 to 125 lbs. as desired. Three strokes each circle. Self-feed. Works at stack, barn or windrow.

Here's the biggest money maker you can buy. Low price. Free trial and absolute guarantee on every press. Write today—full information free.

Geo. Ertel Co., 384 Ky. St., Quincy, Ill.

Save $50 to $300

Yes sir, you can positively save that much *or more* by buying your gasoline engines *direct from the manufacturer.* I am out to triple my gasoline engine business and I'm going to do it because I am making three engines where I formerly made one and I'm making prices that are selling them like wild-fire. Before I started manufacturing gasoline engines and selling them direct to you farmers, dealers used to get $225 to $300 for 5 H. P. Engines that were far inferior in quality to the famous 5 H. P. Model which I put on the market at the unheard of price of only $119.50.

Now I Am Making a Still Bigger Cut Just notice my *new* prices, only $99.50 for my famous 5 H. P. engine and other sizes in proportion. Here's your chance to get an engine this year at a price never before equalled—an offer made possible by my increased production. Act *quick*—these prices are *good for 60 days only.* Write me today for my big engine catalog and special 1913 offer that will help you get your engine partly or entirely without cost to you in the end. Don't wait. Don't put it off. Write to Galloway today.

2¼ H.P $39.50
5 H.P $99.50
7½ H.P $179.50
10 H.P $253.50
15 H.P $334.50

QUEREST cropper, highest yielder, none better for quality. Try a patch this fall from our seed. We hold the highest record in show ring for Iowa. Pure, recleaned, plump seed, best grain sacks free at $1.10 per bushel. Ask for sample.

JNO. JUSTICE - - - ANKENY, IOWA

wants another season. It is the same with the various vegetables.

Many farmers save seed from the above mentioned plants, but they are not careful about selection, using all the plants that are wanted and saving for seed what happen to be left at harvest time. As a consequence, in a short time the variety is "run out," the term used when seeds propagate weak, inferior plants. A little care in saving the best early specimens will improve the varieties instead of injuring them. It is interesting to try to improve upon the original stock when one has the time to devote to this work. In order to improve the varieties, or even to keep them pure, only one can be raised in the same plat. Nearly all plants will cross or mix if two or more varieties are planted close together; varieties to be kept pure should be far apart.

Wm. F. Purdue.

EXAMINE YOUR OATS FOR SMUT.

To the Editor of The Homestead:

According to a large number of counts which were made in the oat fields last year, 7.3 per cent of the oats were infected with smut. This loss amounted to hundreds of thousands of dollars, but in spite of the enormous loss last year, we have failed to take heed of the lesson and have a much larger per cent of smut in our oat fields this year than ever before. It would be well for us to take note of our oat fields at this time of the year.

There are a few farmers in every locality who have treated their oats. But, on the whole, the number who have treated is very small. Some have objected because they did not have time, others were skeptical, and some considered that their oats did not need treating—in fact, it is the common opinion among a good many men since their oats never have been infected that oat smut will never be present on their farms. Some of these men this year have learned the lesson of their folly. The result was that there was more smut this year than ever before. A large number of observations in the oat fields this year has shown an average of over 13 per cent of smut in the fields. This may be high as an average for the state, but at any rate it would indicate the extremely large amount of smut which is present. In a single county of the state this loss would amount to a large per cent of the tax levy of the county, and it could easily be avoided. The expense of treating oats for smut is less than one cent per bushel for the seed sown. When properly done the treatment is effective. In fact, the average of last year showed that the loss on treated fields was less than 1.9 per cent, and there is no doubt but this could be reduced if the treatment had been properly done. A large number of counts in fields this year indicate similar results. In fact, the figures on counts made this year are lower than averages for the state last year.

Unless the oats sown next spring are treated, the per cent of smut will unquestionably increase. Some have tried to avoid the smut by buying seed of their neighbors. This is never satisfactory nor desirable. Some have discovered from their own experience this spring that such oats are more smutty oftentimes than those raised at home. The oats which were purchased may have been perfectly free from smut a year before, but it must be remembered that smut is carried in wagon boxes, sacks, in threshing machines and is also carried by the winds. For this reason, oats which are perfectly free from this fungus oftentimes become badly infected in a single year.

Oat smut is a kind of fungous plant. The dust of the smut contains the seed spores which lodge on the oat kernel and are planted with it in the spring. When the oats sprout, the spores sprout, grow in the oat kernel and upward through the walls of the oat plant. The smut therefore is present during the growing season, but does not make its appearance until the oats begin to head. We then have the seed of the smut plant instead of the seed of the oat plant. Nor can we blame the season nor the oats for this. The farmer whose oats are infected should blame himself. Let him be content to figure up his loss and then from the lesson he has learned avoid it another season.

A. A. Bunger.

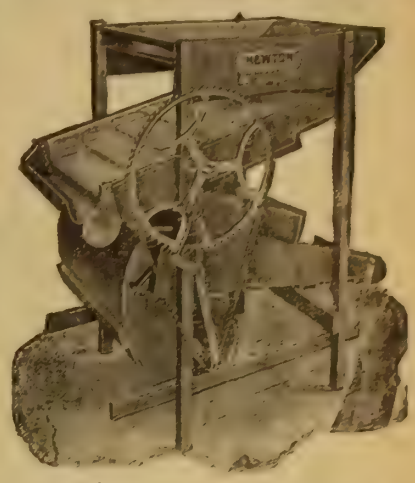
A few of the advance agents of civilization are putting fly traps in their barns for the benefit of their horses and cows and incidentally for the benefit of their pocket books. This with the cleaning out of the breeding places of the fly may, in time, lessen the pest.

Dynamite is more and more playing an important part in farm affairs. Orchardists in those localities where the soil is stiff "blow up" the tree holes where formerly these were dug. In hard pan regions the "greased crust" may be destroyed for all time by putting off a small stick of dynamite at points fifteen feet apart each way.

Group of Irvinedale Belgian stallions owned by Chas. Irvine, Ankeny, Iowa. See field note on page 26.

WHEN AT THE IOWA STATE FAIR

Don't fail to visit the One Minute Mfg. Co.'s exhibit. See the Big **Newton Grain Grader and Cleaner** in operation. Watch it, and by its own simple way of telling the story learn how all kinds of grain and seeds may be accurately and cleanly separated and graded. This machine is a good investment. It will pay for itself in one season; and you will be able to raise larger and better crops than you ever dreamed of raising.



It Has Made Good

because it is adapted to practically all kinds of grain and seed, and it does the work right because it is equipped with the necessary screens to perform the work. Will separate oats from wheat, weeds from clover and grass seed. Give it a trial. We guarantee it to give satisfaction.

Our Newton Low Down Manure Spreader

will bear the closest inspection. It contains many new features desired in a spreader. Learn its story too—it will certainly interest you and convince you that by using the best tools you gain the best results. Write for particulars.

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

APOPLEXY.

Two gilts, weighing about eighty pounds each, in nice thirtfy condition, not fat, fed on separator milk and about an ear of corn at a feed twice a day, supplemented with ship stuff, suddenly became paralyzed. One died in two days and just before death seemed to suffer great pain. Both appeared very sensitive while ailing. The other one recovered to the point of being able to walk around and then died very suddenly the third day. A third one, a litter mate to the two above, was afflicted the same way, but has recovered. Four barrows, all litter mates to the gilts, in the same pen and fed the same showed no symptoms. Can you make a diagnosis?

We would suspect apoplexy and paralysis due to indigestion and plethoric condition induced by overfeeding and lack of exercise. At once turn the remaining hogs out on pasture and continue to give them free range. Feed light laxative slop, to which add, for a time, one ounce of lime water per quart. Stop feeding corn for the present.

CONTAGIOUS OPHTHALMIA.

My young bulls six months to one year old have sore eyes and then go blind. I do not think it is pink eye. They are in a low, swampy pasture.

This disease often seems to lurk in swampy pastures, but it is contagious and spreads from animal to animal. Often it is brought in by cattle or is contracted in infected yards, chutes, pens, cars and such like places. Change the cattle onto dry pastures and separate the affected from the well animals. Twice daily sponge the eyes of the infected animals with a solution of boric acid, using a fresh swab of absorbent cotton for each application. Two or three times a week dust the eyeballs with a mixture of equal parts of finely powdered calomel and boric acid.

ABSCESS.

A roan mare thirteen years old has a swollen udder. About a year ago she had a fall and the next morning I noticed her udder was swollen, forming in a few days into a little boil which broke open and discharged. The veterinarian whom I consulted cut the swollen portion in two places and now it is worse than before, forming several boils which break open and discharge pus, then close for a few days. She is very stiff in the hind quarters until it discharges again. Otherwise she seems well .

The udder is ruined and this mare should not be bred. Twice daily inject peroxide of hydrogen into the discharging places and twice a week use tincture of iodine in place of the peroxide. Once daily give the udder a rubbing with iodine ointment and if necessary change to mercurial ointment in a week. Try to milk out and get rid of the pus that forms. It may be necessary at the outset of the treatment to open the discharging places more freely and scrape away diseased tissues.

LAME COW.

A red cow seven years old came fresh last January, but has not come in heat since she calved. She has been getting thinner and thinner and is now lame in her hind legs. She has no appetite for any kind of feed.

Tuberculosis is to be suspected as the cause of the symptoms described and it is a contagious disease and incurable. Isolate the cow and have her tested with tuberculin and also better not use the milk before having her tested. If she is not tuberculous give her half an ounce of salicylate of soda twice daily in her feed and keep her in a sunny, dry box stall. She may turn out to have chronic rheumatism.

VACCINATION FOR HOG CHOLERA.

I have a herd of seventy-five May and June pigs and fifteen sows which I had vaccinated with the single treatment to prevent cholera. Will it be necessary to vaccinate again inside of forty days, and will it leave the germ on the place the same as if they had had the cholera? My pigs have been healthy, but cholera is in the neighborhood.

If the virulent blood is used at the time of the second vaccination the farm will be afterward contaminated with cholera contagion and double vaccination would have to be done yearly on all hogs. Consult your veterinarian and he will probably advise giving a second treatment with serum alone.

GROWTH IN TEAT DUCT.

Am milking a Jersey cow four years old, with a four-months-old calf, (which does not run with her). Have noticed a lump in her left front teat that hinders the flow of milk entirely. It is about two and one-half inches long and as large around as a lead pencil. Seems to work up and down in the teat. The udder above the teat feels and looks full, but does not feel feverish or swollen though it is tender to the touch.

Interference with the growth in the teat duct will be likely to do more harm than good and we would advise you to leave it alone. Rub the quarter of the udder above the blind teat with camphorated oil twice daily, to stop milk secretion and remove the soreness. If this does not suffice rub in equal parts of fluid extract of belladonna leaves and camphorated oil.

Oakdale Farm draft stallions owned by C. G. Good, Ogden, Iowa. See field note page 29.

WHAT BAD ROADS COST.

How states and counties are putting money in the pockets of the farmers by investing in the improvement of public roads is shown by a statement just issued by the office of public roads of the department of agriculture. Definte cases are cited in support of the argument that where bad roads prevail farmers are forced to move their crops not when the market price is favorable, but when the roads are favorable.

Two farmers living in separate counties, but at an equal distance from the cotton market, learned by telephone that cotton had advanced in price $1 per bale. The farmer living on a bad road responded by hauling one bale of cotton, which was all he could get over the unimproved road, while the other farmer was able to haul four bales, owing to favorable road conditions. The rise in price gained a profit of $4 to one man, and $1 to his neighbor.

It is shown in the statement that it is common for the farmer to find that he cannot haul his produce to market when prices are highest, because the roads are impassable. When the roads become passable, the time for market has largely passed and produce is conpelled to move in masses, which frequently gluts the market and breaks the prices.

Excessive fluctuations in market prices are seldom due to overproduction. They frequently take place in regions where the local production does not equal the annual consumption. There are counties rich in agricultural possibilities, burdened with bad roads, where the annual income shipments of food-stuffs, exceed the outgoing shipments in the ratio of four to one. Many such counties with improved roads could not only become self-supporting, but could ship products to other markets.

A farmer in Sullivan county, Tenn., a few miles from Bristol, had 100 bushels of Irish potatoes which he intended to market during the winter of 1907-1908. Owing to bad roads, he was unable to haul the potatoes at all, and they rotted in the cellar. Nevertheless, the price of potatoes at Bristol went as high as $1.40 per bushel in the meantime. Bristol merchant stated that during the winter as many as ten carloads of farm produce, including wheat, potatoes, and other supplies, were daily shipped in to feed not only Bristol, but the adjacent territory.

THE STORM LAKE SILO

Has many special features. Best form of HINGE DOORS, air tight and quick detachable, easy to operate. Best form of HOOP CONNECTION; all hoops can be tightened from doors, no seperate ladder needed. Best and most complete anchoring system. These special features with the best quality of Washington Fir material we can buy makes our silos the most complete, convenient, durable, and up-to-date silo to buy. Write for free literature, describing our silos and ensilage cutters. See our exhibit at Iowa State Fair.

STORM LAKE TUB & TANK FACTORY

Storm Lake Iowa

IOWA WEATHER AND CROP BULLETIN.

The following climate and crop bulletin is issued by the Iowa Weather and Crop service from the central station at Des Moines, for the week ending August 10, 1913:

The drouthy conditions continued with increased severity until the 10th, when copious showers occurred over the larger part of the state, and were followed on Sunday night by heavy rains, accompanied by high winds in many localities. On the 8th the temperature ranged from 100 to 105 degrees over the southern sections, and were attended by hot winds. Corn in the northern part of the state has held its own remarkably well and gives promise of a good crop. In the southern counties corn has steadily retrograded and the condition has been reduced 20 to 50 per cent since July 15th. While much of the damage to corn is irreparable the rains will greatly improve the general condition and prevent further injury. The rains will also be of great value to potatoes, pastures, meadows and gardens, and will increase the water supply, which was getting scarce in the southern counties.

The following telegraphic reports were received on the morning of the 11th and show the amounts of rainfall for Sunday and Sunday night at the stations named: Des Moines, 2.49 inches; Cedar Rapids, 2.34; Albia 2.05; Marshalltown, 2.23; Waterloo, 1.36; Creston, 1.01; Burlington, .52.

Following is a summary of reports showing conditions of fruit on August 1, 1913: Apples, 83 per cent of the 1909 crop, or 5,600,000 bushels for this year Estimates show a decline in condition of plums from 65 per cent on July 1st to 56 per cent on August 1st. Grapes seem to have suffered no injury from weather conditions. The estimates indicate 91.5 per cent or only one-half of 1 per cent since July 1st. The crop will be exceptionally clean on account of freedom from disease due to the dry weather.

DAIRY

DAIRYING FAVORS A GOOD HAY CROP.

To the Editor of The Homestead:

While a good many farmers of a certain neighborhood through which I not long ago passed were complaining of having a very poor crop of hay this year, it was my good fortune to stop for a little while at one place where they had the best hay crop I have seen in many a day. The timothy stood more than four feet high and of a fine dark green color, showing a fine state of fertility in the soil.

That day I rode through more than one mile where the grass was so poor that it does not seem to me it would be profitable to cut it at all. The men might "go through the motions," but the harvest would hardly pay for the time spent.

Why this difference in so short a distance?

Dairy farming did it. On the poor grass farms very few cows are kept, while on the farm where the good crop was harvested cows were kept right up to the limit. Everything the farm produces in the line of hay, grain, straw and corn fodder is fed out right on the place. The other men if they have an extra pound of hay load it up and haul it off to town and sell it. They do get some ready money that way, I know, and that jingles good in the pocket, but in a little while it is gone and the farm is so much the poorer for it.

The young man who came on the good grass farm a few years ago found it about like the other places in the neighborhood. He thought it over, talked it over with his father and they decided that the best way to build up the place was to add to the herd of cows. This was done and the farm is growing better every year. True, other things went with the dairying. More lime and some commercial fertilizer has been bought; but the cows are the mainstay of the farm operations. Last year a big silo was built and preparations made for still more cows. If this is done, the farm should be still better in the near future.

It is strange you men should be so short-sighted as to think that you can rob your farm of its fertility and still keep on year after year getting good crops. The two things are contrary to nature. You must feed the farm if you would have the farm feed you.

E. L. Vincent.

THE VALUE OF GOOD SIRES.

To the Editor of The Homestead:

No breeder ever established and maintened, for any considerable time, a herd of unusual merit except by the use of high class bulls, and no breed of cattle can be kept at a high standard of excellence without constant use of the improving and refining influence of such sires. Many breeders who through good judgment or by chance have secured an excellent and prepotent bull have had their herds lifted from an ordinary standing to the front rank and after being in the lime light for a few years sink again to mediocrity, all because the owner did not follow up the improvement with bulls of the same class. I am aware that it is of times difficult to find a successor to a great sire and some times bulls that are good enough in form to become champions in the show yard do not prove great breeders. These are exceptions, however, and are not in accord with rules of inherited merit. It is an unwise and easily discouraged man, therefore, who will allow his herd to lose its standard of excellence because he did not, at first attempt, find a bull the equal as a breeder of the one that had given his herd a reputation and standing for superiority. There are good bulls to be had, and certainly a case of this kind is one requiring perseverance if success and leadership are to be maintained in the face of strong competition. Hence the standing and success of the breeders own herd, as well as the continued supremacy of the breed, requires the use of only high class sires—bulls of rare individual form and prepotent power as well as excellence of breeding.

In different periods of Short-horn history there has been a tendency, on the part of some, to extol pedigree and to lose sight of individual merit. The former is very important, but without the latter it is a delusion and will bring only disappointment.

There have been in use in the United States, during the last ten years, several Short-horn bulls whose influence in improving and refining the breed has been marvelous. These bulls have had rare excellence in form and

The illustration shown herewith is that of Royal Blossom 9th, one of the many choice Duroc sows of the D. S. Cochran herd of Lincoln, Neb. This sow was purchased of the well-known Duroc breeder, J. S. Beem, Bethany, Neb. She is sired by Hunter's Crimson Wonder by I Am A Crimson Wonder 2d, and her dam is the famous sow, Royal Blossom 6th, she being a daughter of the great show and breeding sow, Royal Blossom 5th. Royal Blossom 6th is also the dam of some of the best Durocs in Nebraska, including the great Royal Wonder, a boar that will be heard from next season, and Crimson Critic, the Briggs Bros. boar.

65 HEAD REGISTFRED HOLSTEIN-FRESIAN COWS AND HEIFERS

I AM offering a splendid lot of cows and heifers for sale, due to calve in the fall to a son of King of the Pontiacs, or Sir Pontiac Ragapple Korndyke. Will make prices to suit for next sixty days. Also a few bulls of serviceable age for sale. Address **ROCK BROOK FARM, Station B., OMAHA, NEB.**

Pure-bred Registered
HOLSTEIN CATTLE

By the time the average farmer dairyman fully comprehends what progressive grading up with pure-bred Holstein blood will do for his cows, it will be difficult to secure good sires.

At the present time you can get good sires of tested ancestry at reasonable prices—sires that in a few years will put your herd on a very profitable basis.

With land increasing rapidly in value, food stuffs and labor becoming expensive, cows must be larger producers merely to maintain their earnings.

richness of breeding, though some of them did not have the so called "straight" pedigree demanded of American-bred Short-horns. A list of such bulls would no doubt be of more than passing interest to Short-horn breeders, and when the suggestion for such a list first took form in the writer's mind, letters were sent to several owners of bulls that belong in this class of great producers, asking for data to be used in this article. The inquiry met a prompt response from two, a promise of information from two more and no response from others; so the information which I intended to give concerning noted Short-horn bulls can be given in detail for only two or three.

It is no partiality and no reflection on the owners of other noted sires to say that the two bulls that in recent years have exerted the greatest influence on the Short-horns of the United States are Whitehall Sultan and Choice Goods. In breeding they both represent the best Scotch blood with a dash of good Bates breeding and in form their unusual merit was fully demonstrated in the show yard. More of their sons and grand sons have gone to head herds than the produce of any bulls in modern days, and the impressive and improving influence of these great sires is being passed on to other generations of Short-horns. Possibly the most noted sons of Whitehall Sultan are Avondale and Glenbrook Sultan, while the transmitted merit of Choice Goods can be seen at Wooddale through the influence of Choice of All, at Hallwood through Choice Goods Model, in the Bellows herd where both sons and grand sons were used and in the Rees herd where the combined blood of Choice Goods and the great cow Ruberta is in evidence. It is difficult to estimate the value of such great sires as the two just mentioned. The owner of Whitehall Sultan reports that he realized $65,000 from the sale of sons and daughters of this great bull and in one public sale the produce of Choice Goods brought $32,000.

It would be interesting to give exact information about several noted sires of present or late days but the absence of the desired data prevents. But it is a pleasure to include in this list two bulls owned by a breeder who has been particular to keep high class sires at the head of his herd, Cumberland brought Mrs. Saunders of Iowa into prominence as a Short-horn breeder. This bull was bought during a great depression for $205, but proved a great breeder even when used on cows of ordinary merit. His best son, Cumberland's Last, succeeded him in the herd and has left a produce that stamp him as a great sire. An accident that impaired his virility at five years of age was a loss to his owner and to the breed. The sale of sixty-eight of his calves for more than $30,000 shows that his produce was appreciated by other breeders. The value of good sires should be fully understood by all Short-horn breeders and every one should have the best bull he can get. B. O. Cowan.

THE FARM EXHIBIT HELPS FARM AND MAN.

(Continued from page 3.)

some one else. Along with this there should be a short note giving in brief the steps which the exhibitor used in getting his grains to their present standard and also the prices which he charges as far as possible or subject to change as the demand exceeds the supply.

All in all the farm exhibit can be used to advantage in many ways. It merely brings out the originality of the farmer and his family and gives them an advantage over their neighbors who do not think it necessary to go to this trouble to get before the farming public and to stimulate a demand for one's products which in reality is the farmer's greatest fault. The farmer's greatest trouble today is not in the production of certain staple products but in their sale both from an economical as well as a financial standpoint, since but few producers actually sell their products to the consumer, several middlemen getting their share and then some of the price which the consumers are now paying.

Dorothy Long King by Long King, is one of the attractions, bred to A Wonder 143421, that sells in H. L. Pritchett's sale, New London, Mo., Aug. 21, 1913.

WAYS OF DETECTING POOR CLOTH.

Two good ways of telling whether or not the cloth you buy for "all wool" is really what it is represented to be, are given by Miss Annabell Turner, of the home economics department of the University of Wisconsin.

"Unravel a sample of the material exposing the warp and weft threads separately," she says. "Wool fibres are more curly than the cotton. Then burn some of the threads; if cotton, they will burn quickly; if wool, more slowly with an odor like burning feathers or bone.

"If cotton and wool have been spun together in the same thread the above test is not reliable. In such a case, the alkali test should be used. Mix together one tablespoonful of Lewis lye and one pint of water. Place the sample of goods in a granite dish, cover with solution, and boil for five minutes. At the end of this time all the wool will be dissolved out, leaving the cotton intact, so that it is very easy to see how much cotton was used to adulterate the 'pure wool' fabric."

Let your chicken house be roomy, clean, dry and well lighted, yet free from drafts. Have the walls as smooth as possible, so as to be easily whitewashed. Let the floor be of gravel or cinders, covered with a deep litter of straw.

Surprised Everybody!

WHEN you see the new 1913 Model "Ohio" Silo Filler you will have a *new* light on Silo filling profits. The famous *leader* with 59 years' experience behind it is making *new* records. It's now a *better* machine than the "Ohio" Models that won *preference* at experiment stations and that made the "Ohio" the *leader* of the world.

Bigger capacity—faster work—lower cost of operation and *better* quality work has been the aim of our engineers. Their remarkable results are now ready for you in

The New 1913 Model "OHIO"

It's Now Making Records You Never Thought Possible

It's the only machine that is driven, cuts and elevates direct from the main shaft. Saves power, increases capacity and avoids blow-ups and explosions. Powerful fan lift operates at low speed—650 to 700 R. P. M.

Entire feeding mechanism controlled by *one lever*. Finger pressure instantly starts, stops or reverses feed rollers and traveling feed table by *wood friction*—not a gear tooth changes mesh.

Feed rollers have the famous "Bull Dog" grip; single chain traveling feed table never twists or binds; knife cylinder has extra wide ring-oiling bearings at *both* ends—prevents knives from springing; throat opening and fan case are extra large—blower pipe is 10 inches—it's easy to get enormous capacity to top of highest silo without clogging—50 to 250 tons in a day on 6 to 15 H. P.

The "Ohio" is made in five popular sizes—cuts all silage making crops. Can easily be converted into a shredder.

Get "OHIO" Facts First—Make Best Profit Records

SOME SUMMER POULTRY NOTES.

To the Editor of The Homestead:

A box of crushed oyster shells should always be kept in reach.

The hen needs a balanced ration, the same as the cow or the man.

Keep the coops for the small chicks at a distance from the hen house.

On cool, damp, rainy nights close all the ventilating windows of the hen house.

The color of the egg shells has nothing to do with the food value of the eggs.

Eggs cannot be produced without nitrogenous food in some shape. Bones are absolutely essential.

The roosts should be low, especially for large heavy fowls, and they should all be of the same height.

The nesting boxes should be in the darkest part of the hen house, and should all face away from the door.

Remember that the hens which lay the golden eggs are the ones that produce them when they bring the highest prices.

Sprinkle a little carbolic acid in the hens' dust bath occasionally. After each rain stir the dust and make it fine again.

It is said that if alfalfa hay is used for hens' nests and scattered around the chicken coops the chicken mites will beat a hasty retreat.

The products of the great American hen rank fifth in our agricultural products, and every year more people are realizing that there's money in hens.

Do not go into the poultry business. Grow into it. Start on a small scale and learn the details of the business before you put much capital into it.

When the hens stop laying they may often be started again by a change of feed, but do not give them much if any corn in summer, unless, of course, you have cooped them up to fatten for market.

Air slacked lime dusted everywhere will aid materially in destroying lice, gapes and roup. Prevent disease among your fowls rather than risk curing them after they are affected. Keep the quarters clean, and supply pure water.

One of the best foods for making hens lay is lean meat. When the supply of eggs begins to fail stop all other foods and feed lean meat or liver, and it will be found superior to anything that can be used. Green bone containing a large proportion of lean meat is even better. Be sure to remove the fat portions. Skim milk is another egg-producing food. Moisten all ground feed with it.

The lower your fences are, the heavier should be your breeds of poultry. One of the best breeds for the small patch farmer, or the business man or wage earner living in the suburbs, the man who cannot afford to put much money into expensive wire netting, is the light Brahmas. They stand confinement in narrow quarters, and they also stand cold weather. They are less subject to disease than some of the other breeds; they make good layers, and average in weight, when fully grown, about eleven pounds, so when you market your surplus stock you have something to sell. Other breeds which do well in the small patch or acre lot are the Plymouth Rocks, Wyandottes and the Rhode Island Reds. But if you have plenty of space for your chickens the cheapest breeds are the nervous, restless ones, which means that they are good rustlers and foragers for food, and will not need much feeding. The Brown or White Leghorn and the Black Spanish are among the best foragers.

To break a hen from setting take a steel trap, wrap a piece of thin cloth around each jaw, set it and place it in the nest, and when you hear the hen squalling take her out of the trap and set it again in the nest. It will rarely be necessary to take her out of the trap more than once. If you have a trap strong enough to hold a hog or dog it will also break them from trespassing.

Little chickens that run with the hens should have a place to eat where they will not be molested by the larger ones. Make a low slat shed and put the feed troughs in the center. They will soon learn to go into it, and will there be protected from sun and rain. It can be made of old boards and narrow strips, with places between for light. The posts may be driven into the ground and the bottom strips nailed on two inches or more from the ground. Cover the roof with paper of felt roofing.

To fatten fowls rapidly keep them in rather small coops where they cannot take much exercise. Keep the coops darkened by covering them with old cloths. This will keep the chickens from moving around in the coops. Give them soft food that can be easily digested—corn meal, ground oats or buckwheat in which quite a quantity of lard or tallow is mixed. This with plenty of pure water will fatten them in ten days.

Perhaps more failures result from over feeding than from any other cause. The laying hen and the growing chick need plenty of exercise and a good protein ration. Watch an old hen that has hatched a brood out under the bushes somewhere. She doesn't give them ideal care, but she does give them a diet that agrees with them. She scratches out a bug or picks up a seed, walks about considerably for the little she does get, and then each chick gets only a fraction of it all. You wonder as the days go by where they get water. You are familiar with seeing hand-raised chicks fill up on drink and moist food till their crops look like bladders. Your chicks get sick and die. Hers do not. They thrive and grow. They are lean but lively, and full of vigor. It is a worm here, and a bug there, a bit of gravel, a blade of grass, a scrap of fruit—an endless variety, but in limited quantities, and never mixed with the drinks.

Isaac Motes.

By hollowing out gourds and suspending them from trees and poles, an Illinois farmer provides nesting places for the native American birds, the wren and bluebird, and protects them from the aggressive English sparrow, which has a tendency to monopolize the desirable nesting places. The gourds designed for wrens have entrance holes about the size of a silver quarter. This is sufficiently large for a wren to pass through, but not large enough for a sparrow. The bluebird is about the same size as the sparrow, so a different arrangement was necessary. The farmer discovered that the English sparrows would not use the gourds if they were placed in the sun, but that the bluebirds would. Secure nesting places were therefore provided for the latter by suspending the gourds from poles placed out in the open.

The photograph displayed herewith was taken last season on the farm of Frank J. Rist, Humboldt, Neb., This is a field of University No. 42 Turkey Red wheat and this field shown made an average of forty-two bushels per acre. The same variety on Mr. Rist's farm will probably make fifty bushels this year. This is the best variety out of a thousand selected by the Nebraska State Farm, and is developed from a single head of wheat. Nothing better to be had anywhere, and the price is reasonable. Write Mr. Rist for prices and mention The Homestead. See advertisement on page 13.

Germozone Twice-a-Week

Chickens, feeding from the floor or ground, are especially liable to sickness from impure, musty or spoiled food and drink. They are also subject to easy infection of the mucous lining of mouth, nasal passages, eyes, throat, crop and bowels. **Germozone**, given in the drinking water, insures purity of the water and also of the food taken before or after. It regulates the bowels, giving those slatey colored droppings, tipped with white, that every old poultryman knows means HEALTH.

Then, too, for ROUP, CANKER, COLDS, SORE HEAD, SWELLED HEAD, CHICKEN POX, etc., **Germozone** is a ready remedy, easily used and very effective.

Don't put off using **Germozone** until your birds become sick. It's easy to keep a healthy hen healthy, but it's harder to cure and still harder to get her to laying again. Learn the "Lee way." "Lee's Poultry Book" and "Pointers for the Amateur" are both free.

Germozone may now be bought at most every town; over 10,000 dealers in the United States. 50c per bottle. Sample mailed free for 10c. Made only by

GEO. H. LEE CO., Omaha, Nebraska, or Los Angeles, California

WYANDOTTES.

White Wyandottes 100 hens, 10 cock birds for sale cheap, No. 1 breeders. Geo. W. Livingston, Monroe, Iowa.

check laying, stunt growth, ruin the plumage, torture the hens PRATTS LICE KILLER (Powdered) murders lice and so insures greater profits. 35c, 50c. Guaranteed. Pratts 100-page poultry book 10c by mail

At all dealers, or PRATT FOOD COMPANY Philadelphia Chicago

CHICKEN THIEVES

STEAL millions of dollars from farmers and poultrymen, and how to get rid of them is a problem many cannot solve. It is very easy to do if you use Licecil. Metzger's latest discovery, a new and modern method of doing away with these thiefs. To quickly exterminate them and maki more money with poultry use Licecil, the strongest lice killing compound made. Works like magic. Simply put a few drops in nests and hang balance of uncorked bottle high in coop directly over roost. No painting, no spraying, no dusting. Lice, mites, chiggers, bed bugs, roaches, ants, etc., have no lungs; they breathe through the pores of their body and connot live in these powerful evaporating vapors, which are three times heavier than air and descend in a misty form penetrating feathers, cracks and crevices everywhere, instantly destroying insect life. Licecil vapors will not injure the chicks. Cheapest to buy, easiest to use. Price $1.00 for season's supply. Money back if it fails. Your dealer will supply you. If he refuses send $1.15 for package express prepaid.

DOGS.

COLLIES AND FOX TERRIERS

PUPS for sale at reasonable prices. Fine and well marked. They are beauties. For prices and further particulars address **C. H. & Dewey Ohloff, Props., Postville, Iowa**

Scottish Terriers

THE best little rat, watch, pet and stay-at-home dog on earth. From puppies to grown ones for sale. When writing please state just what you want. **S. HARR - - - RIVERSIDE, IOWA**

S. C. R. I. RED HENS at $1.00, $1.50 and $2.00. No pullets for sale. Address Mrs. Sophia Rader, Laurel, Ia.

A Dependable Farm Electric System

Of what benefit is an electric lighting and power system in your home if it requires constant care, and is frequently out of commission?

The Strong Automatic Electric Plant

requires less attention than any other plant; costs less than a manually controlled storage battery plant of equal capacity, also costs less to maintain, and provides current for less than electricity can be bought from the city plant. The engine starts automatically when the battery is one-half exhausted or when more current is being used than should be taken from the battery and stops when the battery is fully charged. Its automatic control gives constant voltage and more than doubles the life of the lamps. The automatic appliances assure safety and long life.

FREE FARE TO THE FAIR

We will have a plant in operation at the Iowa State Fair, and will pay the fare both ways to every Iowa farmer who visits our exhibit and buys one of our systems any time during this year, 1913. The only requirement is that you bring a copy of this advertisement with you to the exhibit. If you are not coming to the fair write us for our catalog.

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Postoffice Box 639, Aurora, Missouri.

WITH THE EDITOR.

These are the days when a hammock under a big tree, and a lounge on a shady porch invite to refreshing rest dear to the man who has been toiling in the fields and dear, too, to the woman weary from labors in the kitchen.

Dog days are apt to be trying days to both the man and the woman, but sometimes they might be made less trying than they are.

Sometimes a man who already owns a 160 acre farm is so money hungry that instead of resting during the greatest heat of the day, he hurries back to the fields as soon as he has swallowed his dinner; and sometimes his wife is so over-burdened with work that she can find no time to rest though she has risen at dawn. Sometimes, where fields show careful tillage and where there is no lack of up-to-date machinery, never a tree shades the farm house although it lacks a porch to shield it from the blazing sun.

In such a farm home no one has had time to plant vines, and the chances are that the kitchen boasts only a wood or a coal stove which not only makes the housewife's tasks more trying, but also heats the whole house to such a degree that to rest in comfort is entirely out of the question.

How different conditions are—and how infinitely more desirable—where there are shade trees and porches, summer stoves and a sane determination to minimize hot weather discomfort as much as the thermometer and other circumstances will permit.

If a man, working in the harvest fields, has visions of a noonday meal in a cool place and a noonday nap in some restful spot, he is in a sense armoured against the heat; if a woman has a shady porch and a gasoline stove, the strain of summer cooking and preserving and ironing is materially lessened.

While the heat is oppressive and while the lack of summer comforts is a hardship, is the time to lay plans and to make resolutions which will materially improve conditions another year.

"Doing without" is all very well for a few years—while the current of life flows free—but such unwise action kept up year after year is equivalent to burning the candle at both ends and in late life the burners will pay dearly.

HOME AND HOMEMAKING.

CLOSE AT HAND.

The day is long and the day is hard,
We are tired of the march and of keeping guard,
Tired of the sense of a fight to be won,
Of days to live through and of work to be done,
Tired of ourselves and of being alone.

And all the while, did we only see,
We walk in the Lord's own company;
We fight, but 'tis He who nerves our arm,
He turns the arrows which else might harm,
And out of the storm He brings a calm.

The work which we count so hard to do,
He makes it easy, for He works too;
The days that are long to live are His,
A bit of His bright eternities,
And close to our need His helping is.
—Susan Coolidge.

TO CURE BILIOUSNESS.

What is known as a bilious condition can be corrected by taking a teaspoonful of sodium phosphate in a glass of hot water before breakfast every morning for two weeks. The juice of half a lemon added makes it more palatable and is also very beneficial. No medicine has its proper effect unless one is careful to eat proper food and follow the rules for healthful living.

GRAPE JELLY.

It is possible to have quite a variety in grape jelly by using the grapes at different stages of ripeness. Made from the green grapes you have a firm, tart jelly. A little later when the grapes have begun to turn they make a pinkish jelly. But grape jelly in its perfection, having that delicious grapey flavor and a beautiful amthyst color, must be made of grapes that have turned, but are not quite ripe enough to eat. If dead ripe grapes are used the jelly is not so nicely colored, and is more apt to have tartar crystals. For jelly that is transparent and that sparkles use only perfect granite or porcelain vessels and always a wooden spoon, for the acid in grapes acts quickly on tin. Take green grapes (preferably Concord) when they are full grown, but still perfectly green. Pick over carefully. Place grapes in kettle with just enough water to come around top edge of grapes (not entirely covering them). Boil hard, stirring frequently, taking care not to let them stick. When the grapes are thoroughly cooked and all is a thin pulpy mass, pour into a new cheesecloth jelly bag and let drip into an earthen vessel. Do not under any circumstances press or squeeze bag. After ten or twelve hours, or when bag ceases to drip, any remaining juice may be squeezed out into a second vessel and made up separately. It will be good, but not sparkling. The proportions are one pint of juice and one pint of sugar, but do not make up without first testing. Take one pint of juice and one pint of sugar in a small pan, put on hot stove and boil hard from the appearance of the first bubble for five minutes, pour out and let cool. If this test jells, proceed; if it does not jell, boil the juice without sugar hard for ten or fifteen minutes. Unless test was very far from jellying, juice should now work nicely, pint for pint.

AMONG OURSELVES.

Mrs. Madison of Iowa has an idea which shows what we might learn from our brothers and visitors of far-off lands:

The Chinese have a chest, which they call "go down," where they keep decorative articles, bringing them out only on holidays and festivals. Make a tour of the house, remove all unneces-

Costs little with a Fairbanks-Morse outfit. Gives you the brightest, healthiest, most convenient light known. Our low-voltage outfit is absolutely safe, easy to install and care for. Engine can be used for other farm machinery or water supply. Battery supplies current when engine is not running.

H--S W-G--R

Can you fill in the blanks above and complete a well known baseball players name? You can if you try Just write and tell me whose name it is and I will tell you how you can get the fine complete baseball outfit pictured below.

There are seven splendid pieces in this great outfit. The ash bat is a good one. The mask is made of heavy wire, full size. The catcher's mitt is thickly padded, very heavy and has patented fastener. The glove is of tanned leather and has patent clasp. The ball is strongly stitched and will last. A neat, adjustable belt and a dandy cap complete this great outfit. Remember you get the whole outfit of seven pieces for a little easy work. Write me today and I will tell you just how to get it.

A. M. PIPER, 840 **Popular Bldg., Des Moines, Ia.**

sary things and those not of any practical use, nick-nacks and bric-a-brac. Take them and put them in the "go down." You will also come across things that will make a beautiful bon fire. After they have been removed for the summer months you will find you can get along without them during the winter, too. Have plain princess slips for house wear, save one light or bright colored one to wear at meal times only. It takes but a minute to change and the change acts like a tonic. Make a face wash of five cents' worth of bismuth, and a few ounces of bay rum and witch hazel, a few drops of glycerine; shake well before applying with cotton sponge; it is very cooling and improves the complexion. Draw the shades down early in the morning; it keeps the house cooler and more restful. Simplicity and restfulness go hand in hand with happiness. "Home, sweet home, there is no place like home," yet its a good plan to leave it once in awhile, if only for a day's outing in the woods with friends. If you think you can't go on account of ivy poisoning, then steep a tea of strawberry leaves and wash with it before going out and on returning. It's a sure cure, and excellent preventive.

"Keep cool" ideas are certainly in order this month, and that recipe for avoiding or overcoming such an unpleasant experience as poison ivy burning is something to be remembered.

Culling "gems" from author's gardens is as joyful an occupation as is gathering pansies or selecting ripening fruit. Aunt Belle has been having that delightful experience and is sharing her trophies with us:

Wrong is forever wrong,
It may be glossed until we know it not,
And painted till it glisten as the dew of heaven;
Yet still 'tis wrong and the omniscient Eye discovers it.
—W. R. Fisher.

In the strength of the endeavor,
In the temper of the giver,
In the loving of the lover
Lies the hidden recompense.
—R. W. Emerson.

We get back our mete as we measure,
We cannot do wrong and feel right,
Nor can we give pain and get pleasure
For justice avenges each slight.
—Aice Cary.

Words without thoughts to heaven never go. —Shakespeare.

Cheerfulness banishes all anxious care and discontent, soothes and composes the passions and keeps the soul in a perpetual calm. —Addison.

You must either serve or govern,
Must be slave or must be sovereign,
Must, in fine, be block or wedge,
Must be anvil or be sledge.
—Goethe.

Search thine own heart,
What paineth thee in others,
In thyself may be. —Whittier.

Conceit may puff a man up, but it will never prop him up. —Ruskin.

Her selections are unusual and will enrich our scrap books.

At this drivng season of the year, possibly there are many of our "house mothers" who may be tempted to fall into the mood against which Mrs. Saskatchewan warns them:

Some housekeepers do not go at things in the right spirit. They wonder why they cannot get this done and that done. Don't think so much about your work and you will succeed much better. Have you ever wakened in the morning and thought of the washing and cooking and sweeping and dusting, the children's lunch and that rent in John's coat that must be mended and company coming to supper, too? All at once you perhaps felt very sorry for yourself and thought how little you were appreciated and you worked up quite a melancholy feeling. True, isn't it? But, don't do it. The day will have begun wrong and each task will be a burden instead of a pleasure if performed in that mood.

There is probably nothing more destructive to happiness, if not to usefulness, than the giving way to such a mood as our friend warns against. Self pity is one of the most dangerous of sins. Self preservation, if for no other reason, demands that one do not yield to it.

A visitor, and not a member of the circle, supplies the next number of our program. I take pleasure in introducing Mrs. M. C. S.:

We had no ice so we rigged up a satisfactory contrivance to lower a galvanized box down into the well. It has been in use for ten summers and we don't see how we could keep house in summer without it. There are so many uses we find for it. We have nice, hard butter in the hottest weather where others claim they cannot make butter in summer without ice. When we moved to a place where there was not the right kind of a well we had one dug and cemented sides and bottom just for this special use and find it paid well. If there is a pump it is set to one side of well, a trap door is cut in platform of well and the "house" set over it. The iron hook is stapled on. It swings over so windlass can be stopped at any depth or height. Trap door is in two sections with hinges on each one and two V-shaped openings to admit ropes. Also on one a little hook and staple to hold it up when open. A galvanized box with iron rings at each upper corner through which rope is run is used. There is a removable shelf in box. We had a tinner make the box.

Buy Your Wife A "Silver Monitor" Range

It will do her cooking, boiling, baking quicker and with more satisfaction and less work for her than any other range made. It will be cheaper for **you** because it is more economical in fuel consumption, but especially because with only reasonable care it will outlast any two ordinary ranges. It will burn either hard coal, soft coal, coke or wood, having a roomy extension in the rear of the fuel box so as to increase the length when wood is used.

The "SILVER MONITOR" is **not** made of ordinary iron, nor even of steel, but of **Genuine Open Hearth**

Guaranteed **Rust-Resisting Non-Corrosive**

Has every improvement you can think of. Has glass oven door with thermometer. Has large broiler feed door with check draft for coal, and a drop front feed door for wood or coal. Clean-out is extra large and air tight and has a large ash pan with pail handle. The contact reservoir is of cast iron, with copper tank, contact on one side, furnished with Japanned covers; also supply reservoir with enamel tank. Every sale is backed by our Iron-Clad Guarantee of

Satisfaction or a New Stove

There is a lot more to be said about the material and the workmanship employed in making the "SILVER MONITOR" range the wonderful stove it is, and we shall be glad to send you our **free booklet** which contains a lot of additional information. Let us also tell you about our wonderful "MONITOR" radiator, as well as other heaters, steel and cast ranges, furnaces, etc., etc.

The Monitor Stove & Range Co., Main Office 501 Oost St., **Cincinnati, Ohio**

Dealers: If you want a line of stoves that sell themselves, that will please your trade, that give you a reasonable profit, write us at once. Our advertising department will co-operate with you and do everything to boost your business. **Warehouses** in Minneapolis, Omaha, Cedar Rapids and Milwaukee. We have an office and sample room at 1414 Wabash Ave., Chicago. **Prompt shipments guaranteed.**

the windlass was from a binder roller and a blacksmith put on the end and handle. The other work was home talent and not difficult to do.

One of the greatest disadvantages under which the country housewife labors in so many cases, is lack of ice, or other means of keeping butter and such things cool. The contrivance Mrs. M. C. S. describes is feasible and should commend itself to the circle. In a general way, using the well as the refrigerator is not to be commended for a simple accident like the dropping of a piece of butter or meat has been responsible for typhoid fever. A device, such as Mrs. M. C. S. uses, makes the farm well a comparatively safe ice box.

Now, while the housewife is so busy canning, jellying, preserving and pickling is a good time to provoke further interests in the cultivation of fruits and vegetables To this end we will have a prize essay contest, the topic to be "Our Garden and Orchard, why we think them worth while." The maximum length of articles to be 350 words, and be mailed not later than September 5. Five $1 prizes will be awarded for the best five articles. A variety of experience is hoped for.

THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Aunt Mary, Hawley, Minn.

FARM LIFE.

(First prize.)

I have heard many people say they could not live on the farm, because there was not any excitement or pleasure; it was dull and lifeless. How can any one who loves nature and its beauties, who each spring day sees the young plants coming from the ground, and the woods full of wild flowers, say that farm life is lifeless? Is it not a pleasure to see these things?

The farm offers almost as many pleasures as the town or city; only they are different. Who does not enjoy the fish fries, the ice cream suppers, school entertainments, box suppers and various other enjoyments? Then, too, most of us have good horses or automobiles. This makes it very easy for us to go to the nearest towns, and enjoy the pleasures which cannot be furnished by the farm.

Some have the impression that country people are ignorant. This is not true. We find people on the farm who are well educated. I know of many farmers and their wives who have college education. Almost all farmers of today are striving to send their children to other schools, after they have finished the country public schools. Another proof of this is to read the letters and questions written by farmers in our farm papers. You can see from these that our farm people are not ignorant. Do these people who consider themselves above farmers, ever stop to think how many of our nation's great men were reared on the farm? In a short time from now I believe everyone on the farm will be proud to acknowledge that they are farmers, and I hope there are none who are ashamed of it now.

Martha, Mo.

OBSERVATION OF BIRDS.

(Second prize.)

I have just finished irrigating the garden, and am making my first attempt at writing to this column.

As I went up the path to the canal to turn in the water I noticed many works of nature. The meadow-larks were plentiful and were singing blissfully and the grasshoppers scattered wherever they went, for they knew they were after them for their breakfast.

A few days ago we finished stacking our first crop of hay this season, and when I was mowing the hay it made me sorry for the birds, as they flew about in the air looking down at the places where only a few minutes before the nest of eggs or nestlings were, in the thick, tangled hay, and several times I have seen the nest with the broken eggs not far off, but the grass was so thick I could not possibly see the nests to raise my sickle to prevent the disasters.

When the birds that build in the trees see these accidents, they should be glad that their nests are up high and out of this great danger.

Some of the birds that build in the hay are our most valued friends, such as meadow lark, black bird and the grass-hopper sparrow.

As I sit here writing I can hear a mockingbird singing in a tree not far off, and I can see a yellow-breasted fly catcher darting hither and thither, catching insects for his greedy little family in some nearby tree.

C. J. H., Colo.

Capturing a Swarm.

(Third prize.)

We live in the country and have quite a large house now, but used to have a small one until we built a piece on, and between the old part and new part there is a swarm of bees. They have swarmed three times now already.

The first time they swarmed they hung in an applie tree, and our neighbor got them; so papa said we wanted the next swarm, that came, and he gave us a beehive. In five days they swarmed again; then we poured water in between them, and they settled in another apple tree way up in the top.

They were very mad this time, three of them stung me and two my sister and two papa. My sister's hand was swollen for several hours; she could not do anything because it hurt her so. Papa wanted to get them into a hive, so he got a sack and put wire around the edge in the sack and we tied mosquito netting over his hat, and gloves over his hands. He climbed up in the tree and got them in the sack, and then he came down and put them in the hive. It looks very nice when they all hang in a pile under a branch.

Four days afterward they swarmed again, and papa was in the field plowing corn, so I went and poured water between them, and they settled right in front of the door in a tree. When papa came home they were settling already, so papa went back to the field; and the sun was shining so hot against the bees that they flew away again. Then we only had one swarm left. We have them down in the garden. They are gathering honey daily now.

In the fall we will take the honey and kill the bees; but we cannot get the honey of those in the house as they are too deep, and we would have to take all the siding off in order to get the honey, so we will get some of the bees next year again, if they swarm. We all like honey except mamma; she does not care for it.

Bee Girl, Ia.

PLEASANT FIELDS OF HOLY WRIT

Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

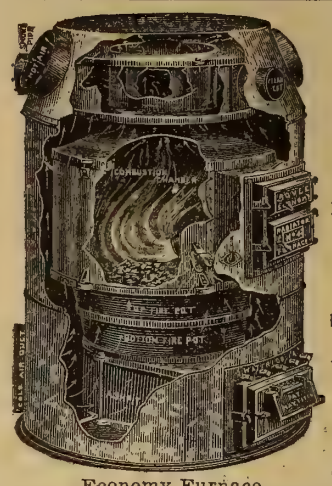
THE INTERNATIONAL S. S. LESSON

3d Quar. Lesson 7. Ex. 13, 17-14, 31, Aug. 17, 1913.

CROSSING THE RED SEA.

Israel made no hasty or clandestine departure from Egypt. Theirs was no attempted escape of fugitives from justice. They had a royal firman. The Egyptians fairly loaded them with gifts in hopes of placating the wrath of their offended Deity. The store of raw materials and metals they carried with them enabled them to make in the wilderness the tabernacle and its furniture and all their armor, offensive and defensive. Theirs was an orderly march. They advanced in tribes, each under its respective commander, Moses in the van, wonder-working rod in hand. In the midst, as a veritable palladium, Joseph's mummied form, inclosed in its hieroglyphic-covered casket, was carried according to his dying request. For sake of pastrage by the way for myriad flocks and herds, the advancing hosts must needs deploy widely to right and left. To direct a general course for these somewhat widely-sundered detachments, God unfurled his pennon in the sky. That banner served a three-fold purpose—signal, shield, and lantern. To Israel's dismay, Jehovah's ensign moved in the very opposite direction from that which would have been expected. Instead of indicating a course toward Suez, the bridge between the continents, it moved southward along the western shore of the Red Sea, thus placing an ever-widening barrier between the pilgrim caravan and the country which they sought. When the ever-alert Pharaoh saw this tactic blunder, this march into a cul de sac, the hope of recovering lost power revived in the despot's heart. Or possibly, it was the hope of revenge for the death of his son and heir, whose recently discovered epitaph (?) he was even then conning. He believed that the hapless Hebrews had unwittingly strayed beyond the jurisdiction of their God, who at best was only a local divinity, and would fall an easy prey. At sight and sound of pursuing chariots Israel was completely panic-stricken. They raised a querulous cry about there being plenty of graveyards in Egypt, and no need of coming to the wilderness to find one. On the dark background of this faithless and irascible conduct of the multitude the noble bearing of Moses shines with augmented luster. His "Stand still and see the salvation of God!" is an incomparable, inspiring bugle-note that has kept ringing through the ages. A moment later and the captain of the Lord's hosts stands on the edge of the comparatively shallow western arm of the sea. He waves his oft-tried rod. In response there comes from the east a violent wind which, in conjunction with an ebbing tide, leaves the bed of the sea uncovered. Deep pools to right and left formed a perfect defense (wall) rendering a flank movement on the part of the enemy impracticable. In the meantime the pillar of cloud went to the rear, and spreading out and hanging low like a curtain, completely screened Israel from the observation of their foes. The same cloud cast its powerful searchlight forward, revealing the way through the sea in its entire length. "Forward, march!" was now the inspiring command that rang along the whole column. Across the bridge which Jehovah had provided, the host, a thousand abreast, marched, and no little child, not even a lamb, was lost. The temerity sinners has no more striking illustration than the rash boldness with which the Egyptians essayed to use in pursuing them, the very bridge which God had made for his people. Pharaoh soon found he, not Moses, was in the cul de sac. God thundered and lightened out of his cloud, phenomena so rare in Egypt as to strike terror to man and beast. Progress of the Egyptain host was delayed until flood-tide, when the wind abated, and the condi tions which had favored Israel being exactly reversed, the Egyptians were whelmed in the deep.

BUY BOVEE FURNACES at MANUFACTURERS' PRICES



Economy Furnace

Save from $30.00 to $50.00 Commission.

The MOST PERFECT manufactured.
SAVES about 40 Per Cent of FUEL.
The Most Durable Sold.
Fully Guaranteed.
Replace your old Furnace or Stoves.
Install a Complete Heating Plant.
The BOVEE Furnace requires LESS FUEL THAN STOVES OR OTHER FURNACES.
ECONOMY FURNACE burns hard coal, coke, soft coal or wood.
HORIZONTAL FURNACE burns long wood or soft coal. Doors 16x16 inches.
Send pencil sketch of floor plan of your building for FREE PLAN and Specifications.
Easy to install—shipped cut to fit with full directions—no tinner required.

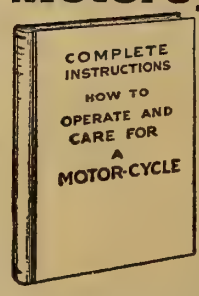
Boys! Learn to Run a Motorcycle Free



EVERY boy should know how to run and operate a motorcycle whether he owns one or not, and we will send ***absolutely free*** — all charges paid—one of these books which tells just how to start, stop and everything necessary to know about running a motorcycle.

1500 Votes Free

We are going to give away a two-cylinder $285 motorcycle free to some lucky boy and if you answer promptly we will actually give you 1500 votes to count on this splendid machine and tell you just how to win it for your own. Send at once as the books of instruction are limited.

Popular Co., 750 People's Bldg., Des Moines, Ia.

COOLING BY EVAPORATION.

To the Editor of The Homestead:

A cooling box of much interest to those not having ice can be made as follows: Get a large stone jar and a box, nearly square about six or eight inches larger than the diameter of the jar, and a little deeper than its height. Set the box in a shady place, put into it a layer of sand about three inches deep, place the jar in the center of the box and fill in sand to about three-fourths the height of the jar. Wet the sand thoroughly, cover the jar to keep out the dirt, and cover the box with a screen or netting. Butter, milk, etc., placed in a cooling box so arranged will keep nicely for some time. The evaporation of the water in the sand keeps the jar and contents very cool. As the sand becomes dry supply plenty or water. Fred G. Person.

Colorado Agricultural College.

When small grain is ripe it is impossible for the weather man to suit everybody. Some want dry weather for harvesting and some want rain for their corn while others want both at the same time.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

6069 Girls' Dress.—Linen or gingham can be used to make this dress with the belt of ribbon or velvet. It is made with a yoke and closes at the back. The long or short sleeves and high or low neck can be used.

The pattern 6069 is cut in sizes 6, 8, 10 and 12 years. Medium size requires 2⅜ yards of 36-inch material with 2¼ yards of ribbon. Price of pattern ten cents.

6115 Children's Dress.—This pretty little frock is made of pale blue linen with the sash of black velvet. It closes at the front and may have long or short sleeves.

The pattern 6115 is cut in sizes 2, 4 and 6 years. Medium size requires 1⅞ yards of 36-inch material. Price of pattern ten cents.

6075 Girls' Princess Slip.—This pretty little princess slip can be made with or without the circular flounce and with the round or square neck. Muslin or longcloth can be used for this slip.

The pattern 6075 is cut in sizes 4, 6, 8, 10 and 12 years. Size 8 years requires 2⅝ yards of 36-inch material, 2⅝ yards of insertion, 2⅛ yards of wide edging and 2¼ yards of narrow edging. Price of pattern ten cents.

6026 Misses' and Small Women's Waist.—A very pretty waist for the miss and small woman is here presented. The garment is made with peplum and the new-style drooping shoulders with joined-on sleeves is noted. The chick turn-down collar adds further attractiveness and there is a frill of edging to decorate the front. A row of tiny buttons give additional trimming effect.

The pattern 6026 is cut in sizes 14, 16 and 18 years. Medium size requires 2½ yards of 36-inch material and ¾ of a yard of edging. Price of pattern ten cents.

6101 Ladies' Skirt.—This skirt is cut in two pieces. The closing is made at the left side of the front and the empire or regulation waistline can be used. This skirt can be developed of serge or bordered goods.

The pattern 6101 is cut in sizes 22 to 30 inches waist measure. Medium size requires 2⅝ yards of 44-inch plain goods. Price of pattern ten cents.

6077 Misses' and Small Women's Dress.—This dress closes at the front. It is made with a vest. The three-gored skirt can be made with either the empire or regulation waistline. Linen or ratine can be used to make this dress with the revers and insert at the bottom of the skirt of contrasting material.

The pattern 6077 is cut in sizes 14, 16 and 18 years. Medium size requires 4 yards of 44-inch material with ⅞ yard of 27-inch contrasting goods. Price of pattern ten cents.

A PLEA FOR STATE AID.

With 1,100,000 automobiles in use and 2,200,000 miles of road it is to be noted that now in the United States there is a motor-driven vehicle for every two miles of highway.

"Many public men have not realized the change this class of vehicles has wrought in commercial as well as social conditions," comments Robert P. Hooper, former president of the American Automobile Association and recently re-elected for the seventh time as the head of the Pennsylvania Motor Federation. "Their minds do not seem to readily absorb the logical resultants of the fact that the city ninety-four miles away is as accessible for business purposes with a motor vehicle, as is the railroad station 9.4 miles distant, with a team and wagon. (Nine and four-tenths miles is the distance of the average American farm from its nearest shipping point, according to statistics gathered by the United States Office of Public Roads.)

"It is a fair proposition that a large percentage of automobiles are utilized in part or wholly for commercial purposes. There are and can be no county or township lines in traffic over roads. The resident in any agricultural comunity does his selling and buying in the city or village most accessible, whether in his own or in another county, or even in an adjoining state; and as accessibility is often a question of roads, he frequently finds fifteen miles over a good road more easily negotiated than five miles over an unimproved road.

"Certain roads in every community (amounting, according to the best authorities, to about 15 per cent of the whole road mileage) are the main roads over which passes upwards of 80 per cent of the local travel. When a single county in a given section improves its main roads, a vast traffic is at once diverted to those roads, this multiplied traffic requiring systematic and unusually costly maintenance. The local community is benefited, of course, but so are the adjoining counties and neighboring states.

"Mecklenburg county, in North Carolina, is an excellent illustration of this feature of the economics of road improvement. Some years ago this progressive county issued bonds and built an excellent system of macadam roads. The initial advantage was at once apparent. Farmers increased their acreage of crops, production became much greater, marketing cost less, and real estate values were enchanced from 25 to 100 per cent. Then came new traffic conditions and through travel of a whole section of the state was diverted over the good roads of Mecklenburg county. The travel between the North and South assumed larger proportions and went by way of Mecklenburg county because of its good roads.

"As a matter of fact, the injustice to the taxpayers of Mecklenburg county must be apparent to every fair-minded man. But Mecklenburg county is not alone in position. Nearly every county in the country lying along the route of a main throughfare in states where state aid has not been adopted finds itself in a similar situation, either with improved roads which from outside traffic are wearing out, or else prevented from making improvements by the not unnatural feeling of the people that they cannot afford to build and maintain roads upon which would come the greatest use and wear from outside the county, with no corresponding advantages. The logic brings the inevitable conclusion that it is the duty of the state, in justice to the people of the counties, to build and maintain the roads over which passes the through travel of the people of the state, and the duty of the nation, in justice to the states, to construct and maintain those important through routes which connect the great centers of population and commerce."

CARING FOR THE BABY IN HOT WEATHER.

To the Editor of The Homestead:

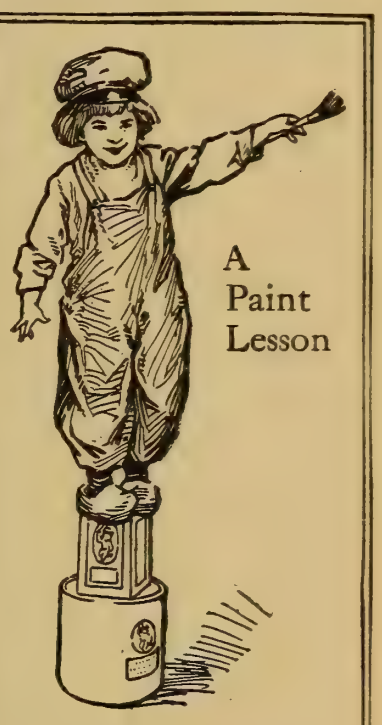
Keep the flies from your baby—they are more dangerous than elephants. The big things show the big danger. The little fly buzzes into manure heaps, filth, putrefacton, and then comes to baby bringing all kinds of disease germs. Flies are deadly. If baby is unable to overcome the deadly germ the fly brings, baby leaves you. I have been watching the work of deadly flies for many years. I know two families living in the little town of B. B. These families were neighbors,—one lady brought out a family of three, and they are robust youngsters. Mother kept them out of the reach of flies. She went hunting for flies, covered her youngsters regularly in the summer time. The other mother did not believe a little fly could hurt her young—she paid no attention to the fly. One by one she laid away her babies until now they are three silent, empty places in her heart, and gloom is in the household.

If you can't keep flies out of the house, cover the baby with a netting, or if you can't afford a net, get a piece of cheese-cloth—anything that will give baby air. See that the baby gets air, and keep it away from the fly.

If you can get a little carbolic acid, mix with one part of carbolic acid and three parts of water. Get a whisk broom and spray with the broom on the floor of the room where baby sleeps in the daytime. We will need good men and women for our future—don't let the fly carry one single one away. The danger is in front of you, it's as real as a big elephant.

When baby cries, try to find out the reason. It may need a spoon of water, it may be a bandage that's too tight, it may be it has laid in one position too long. Coo to baby, but use your mother judgment. Of course, it's hot and you have so many problems too, only baby's problems are solved by you. Try to overcome your irritation before you pick up baby. It's part of you, if you are cross, baby is more than likely to be cross. This life is hard, but it is easier if you are of good cheer. —Theora Carter.

The Canadian government has supplied 25,000,000 tree seedlings to farmers, principally in the Alberta and Regina plains regions. The United States does not supply young trees to the public, except in a limited area in Nebraska, under the terms of the Kinkaid Act.



A Paint Lesson

We paint ten times for our eyes' sake to once for the sake of the building. The poorer the paint the oftener we must renew it to maintain the building's good appearance.

The beauty of a painted building lasts two or three times as long if secured by paint made of Dutch Boy White Lead and Dutch Boy Linseed Oil.

Dutch Boy White Lead—white in the keg—any color you want to make it on the house.

Dutch Boy White Lead in steel kegs, 12½, 25, 50 and 100 lbs. Dutch Boy Linseed Oil, 1 and 5 gallon sealed cans. Ask your paint dealer.

Let us send you "Painting Packet No. 52" full of facts every house owner should know about painting. Also Handy Book on Painting full of information for the man on the farm. We will include our catalogue of 150 beautiful stencils for walls.

TREATMENT OF IDLE HORSES.

To the Editor of The Homestead:

The following item, which is of vital importance if properly considered, has been brought to my attention:

This morning we are compelled to do a piece of work which we hate to do very much, to haul to the burying ground one of our better work horses. He took sick at dusk last night and died at two o'clock this morning. Symptoms were more of poisoning than anything else, although we pretend not to be a "hoss" doctor and may have guessed wrong. In what way he could have gotten poison in his system we cannot even surmise, as he had not been worked for the last two days and had been standing in the barn eating his usual ration. But, as the saying is, "Those who has 'em has to lose 'em."

Poison begins to permeate the system of a horse the moment the animal is deprived of its usual work or exercise and is fed its ordinary rations. During work or adequate exercise the horse uses up the nutrients of its feed in repair of tissue waste, generation of energy, work of organs and maintenance of body weight. All of the excretory organs are active and waste or effete matters are thrown off. Reverse this order of things and the excretory organs become overtaxed and out of order. Effete matters are not perfectly eliminated, toxins (poisons) form and prove injurious. These may be stored up and become actively injurious when the horse is again worked; or they may at once enter into the blood circulation and prove immediately, but less violently, detrimental. In addition to this form of injury suffered by the idle horse, indigestion is apt to follow consumption of regular rations no longer imperatively needed for the uses just mentioned. Colic, in various forms, is the most dangerous and fatal effect of such derangement of the digestive organs, while various skin disorders, slight ailments and abnormal conditions are due to the same cause. The horse mentioned in the clipping printed here no doubt succumbed to some form of colic induced as suggested. Poisoning from feed is more apt to take the form of forage poisoning, such as that which killed hundreds of horses in Kansas, Nebraska and some other states last fall. Such poisoning is due to microscopic fungi, molds or growths upon pasture grasses or fodder and is apparently induced by certain peculiar conditions of the atmosphere and therefore to be looked for only in certain abnormal seasons. Cerebro-spinal meningitis is of somewhat similar nature, and causation. It is unlikely that either cause led to the death of the horse in question. Whatever disease was present its explanation is almost certainly stated in the following words from the above quotation relative to the stricken horse: "He had not been worked for the last two days and had been standing in the barn eating his usual ration."

If every farmer and horse owner would make it his invariable rule and practice never to let a horse stand a single day idle in the stable and always to greatly lessen the ordinary work ration during spells of idleness, thousands of deaths would be prevented each year and a host of horse ailments wholly prevented.

That terribly fatal disease, azoturia, always is caused by exercise following a period of one or more days of idleness during which time the horse is fed his ordinary ration of oats and other rich feed. In one day, following a great snow storm which caused enforced idleness of work horses in New York City, upwards of 100 dead and paralyzed horses were hauled off the streets. In Chicago every holiday and every storm used to be followed by many fatal and disastrous cases of azoturia. In both cities, and in all cities where graduate veterinarians are employed and barn foreman properly warned and instructed, azoturia has become far less common than used to be the case. The simple reason for this happy improvement is that the common sense (horse sense, if you will) plans given above have been made the rule and absolute order of stable management and practice. Azoturia, unfortunately, still is quite common and always the cause of fatalities, work, worry, loss of time and unnecessary expense on the farms and in the improperly managed stables of country and city alike. There need never be another case of azoturia anywhere if the simple preventive measures we have suggested are religiously adopted by every horseman everywhere.

Another detrimental disease to be prevented in exactly the same way as here set down in regards to azoturia, is lymphangitis, often called "Monday morning disease," or "milk leg," or "weed," or "a shot of grease." This disease is characterized by sudden, painful swelling of the lymphatic vessels on the inner side of the horse's hind leg, accompanied by fever, fast breathing, sweating, acute lameness and lack of appetite and resulting in extended swelling of the entire leg, or of both hind legs. Occasionally a fore leg is affected. The symptoms of azoturia are sudden knuckling over of a hind fetlock joint, profuse sweating, hard swelling of the muscles of the hip and thigh, dark coffee-colored urine, fast, full pulse, reddened mucous membranes, great nervous excitement and finally, in acute cases, paralysis and death. In sub-acute cases one hind leg is affected and paralysis may or may not occur and may be recovered from; but in some of these cases the muscles of the stifle and thigh waste away and recovery may be slow or imperfect.

Let everyone prevent both of these diseases, both for economic and humane reasons, by enforcing adequate exercise and feeding light, laxative rations to the work horse that suddenly has no work to do. Those who have 'em don't have to lose 'em.

A. S. Alexander, M. D. C.,
University of Wisconsin.

WOODPECKERS AND FRUIT.

A certain orchardist boasted that he had shot 527 woodpeckers in four years. He believed they were destroying his fruit and injuring his trees. Was he justified or not in this wholesale destruction of bird life?

There are five kinds of woodpeckers universally distributed throughout the northern tier of states east of the Rockies. Every farmer comes in contact with them. These are the hairy woodpecker and his diminutive cousin, the downy woodpecker, the yellow-bellied sap-sucker, the red-head and the flicker or "yellow-hammer." These are the more common varieties; other species are less abundant, also less generally distributed. A study of these five kinds will therefore pretty nearly determine the status of this particular family of birds from an ecconomic standpoint.

It is generally recognized that all woodpeckers are beneficial in so far as they destroy injurious insects. They become a menace to the extent that they injure fruit trees, eat fruit, or destroy insects which in their turn prey upon injurious forms of other insect life. Whether woodpeckers are harmful or useful to the fruit raiser depends upon which of these factors overbalances the other.

In regard to the fruit-eating habit the red-head is by all odds the one individual that has the most damaging evidence to his discredit. He is accused of attacking small fruits and grain, and these accusations are probably well founded in certain localities. He also appears to be less helpful as consumer of insects which are injurious to fruit trees than either the downy or hairy woodpecker, but on the whole the balance is rather in favor of this particular bird than against him. He does consume more or less harmful insects, and his great love for grasshoppers in the late summer and fall will undoubtedly place him in the list of useful birds. Especially during outbreakes of the seventeen year locusts has he been found active in the defence of the farmer's interest.

The flicker eats but comparatively little of our cultivated fruits. His greatest service to the fruit grower is in the destruction of ants of which he is exceptionally fond. Ants of themselves do no great harm save that they protect and foster plant lice in every possible way, and plant lice are one of the worst enemies of the horticulturist. Hence the flicker does the fruit raiser a distinct favor. As many as 5,000 ants have been found in a single stomach of this species.

The hairy, downy and sap-sucker look very much alike to the average person unacquainted with birds, yet these three species contain the most helpful and most harmful of woodpeckers. The yellow-bellied sap-sucker is the same size as the hairy woodpecker, but the male has a bright crimson patch under the chin. The downy is smaller than either, and carries his red patch on the crown of his head. Both the hairy and downy are indefatigable workers, and among the most zealous gleaners of insect life from the bark and crevices of fruit trees. The downy is the arch enemy of the dreaded codling moth which attacks our apple trees and in the winter he destroys innumerable pupae and larvae of this insect.

All woodpeckers eat more or less cambium which is the soft, jelly-like substance found just under the bark of a growing tree. It is the substance from which both the wood and the bark are formed. A woodpecker's onslaught upon a fruit tree for this substance may in extreme cases kill the tree. However, but one of all the many varieties of woodpeckers has been found to be addicted to this habit to excess. This is the yellow-bellied sap-sucker. Of all the woodpeckers under consideration he is the only one which can really be condemned as being more harmful than helpful to the orchardist. He consumes large quantities of ants and injurious insects, and to this extent is entitled to favorable consideration, but the harm which he does in attacking the juices of growing trees more than counterbalances the good that he does in other directions.

Orin Edson Crooker.

TIP LAYERING.

To the Editor of The Homestead:

The black raspberry, the new hybrids and the dewberry are all propagated from tips. The end of the vine of the present season's growth sends out roots when it remains in contact with the earth for any considerable time. If the object is to get as many new plants as possible, these new canes should not be pruned back, and ground should be kept in good condition by late cultivation. Every vine will easily root without any help from the grower. They will often root in the hardest soil if the tip is allowed to touch the ground. The tips should remain as they are without being separated from the parent vine till the following spring, when they may be cut off about six inches from the ground and transplanted where they are to grow.

If new plants are not desirable, the new canes should be pinched back when two feet high, so that they will branch, and stand in an upright position, the tips not being able to reach the ground.

H. F. G.

Wild rice, according to a consular report, is "the most nutritious cereal in America." The plant has a long black grain, and hence is sometimes called black rice. It has been used from time immemorial by certain Indian tribes as their principal food. In recent years it has come into the white man's markets, selling for considerably more than ordinary white rice.

LANDS AND HOMES

IOWA FARMS
WRITE for my large 1913 list of South Central Iowa farms, all sizes, abundance of fruit and water, good terms. The cheapest good land in Iowa today is in Madison, Union and Clarke counties. Address
J. G. SHRIVER - - WINTERSET, IOWA

SOUTHEASTERN KANSAS
IS the place to go for good homes, low prices and easy terms. Send for full information. Address The Allen County Investment Co., Iola, Kansas

FOR SALE—Eastern North Dakota, slightly rolling quarter section; no improvements. One mile from county seat, black soil; town has 5 elevators. Inquire Miss M. C. Roskoten, 211 South Jefferson Ave., Peoria, Illinois.

LANDS in Nebraska, North and South Dakota, Minnesota and Iowa for sale. Write for descriptive list and prices to G. L. Buckley, Pawnee City, Nebraska.

FOR BARGAINS in real estate for sale or exchange anywhere, address Sewell Land Company, Garnett, Kansas.

FOR SALE, OHIO SILO FILLER
SIZE 17, with thirty feet of pipe, two sets of knives, with, or without trucks. New, run only ten days.
L. F. LEFEBURE - - FAIRFAX, IOWA.

PUBLIC SALE OF OKLAHOMA SCHOOL LANDS

Notice is hereby given that the state of Oklahoma will offer for sale at public auction at the times and places herein set forth 560,290 acres of its school lands, as set forth in pamphlet advertising said land for sale.

All lands will be sold at the door of the county court house of the county wherein the land is situated:

Boise City, Cimarron county, 385,376 acres, September 22 to October 10, 1913.

Guymon, Texas county, 182,874 acres, October 13 to October 29, 1913.

The terms of the sale are 5 per cent of the purchase price cash, at time of sale, and in no event shall the initial payment be less than $50. The balance of the purchase price is divided into forty equal annual payments with interest at the rate of 5 per cent per annum, payable annually. Prospective buyers will bear in mind that these lands are unimproved, and the lessee has no preference right to purchase. There positively will be no improvements of any kind to be paid for by the purchaser, and a lessee has no more advantage than a non-resident of the state. Also that 1,280 acres or any subdivision thereof of these lands can be bought by one person. A pamphlet containing full and complete description of each tract of land with the appraisement thereon to be sold together with all the laws, rules and regulations can be had postage prepaid upon application to the commissioners of the land office at Oklahoma City, Okla. Address all communications to John R. Williams, secretary, 502 Mercantile Bldg., Oklahoma, City, Okla.

CENTRAL WISCONSIN
Farms That Are Farms
IN the Marshfield District where ten cows bring in $3.00 to $4.00 daily before breakfast; where pastures are always green and two acres will graze three head during the season; where better than $250,000.00 is paid out monthly for butter and cheese. Great possibilities in hog, dairy and cattle business here. We prove these statements and sell the land that proves it. Some nice tracts of wild, agricultural and grazing lands left. Send for booklet and other information, also list of improved farms. Reference: The people we sell to.
Cole's Land Agency, Marshfield, Wisconsin

MISSOURI FARM LANDS. No better grain and stock land anywhere. Write for list and prices. Fulton Real Estate Agency, Fulton, Missouri.

THE FARMERS REPAIR SHOP.

To the Editor of The Homestead:

The writer is impelled to write this article by the knowledge that few farms, if not the majority, have any facilities for making even the commonest of repairs. A good rip and hand saw are cheap and if well taken care of will last a life time, and a good hack saw is almost indispensable.

A good set of Coe's wrenches is the best equipment in this line, they come in 6, 8, 10, 12, 15, 18 and 21" and a use will be found for all them. Don't try the cheap, so-called agricultural implement wrenches, as they are cheaply made and the best grade will out wear them many times over.

A set of S wrenches, a couple of alligator wrenches with 10 and 15 inch pipe wrenches will be about all in the wrench line.

A two and a half pound blacksmith hammer and a one pound or one and a quarter-pound riveting hammer will be essential.

If a gas engine is used on the farm it can run a drill, grindstone and emery wheel, but be careful and not speed up a grindstone too much as it is likely to be reduced to punk.

A square, rule and tapeline are also needed. On some farms there can be found anvil and forge and they pay for themselves over and over, but it takes considerable skill and experience to do good blacksmithing.

These few tools do not cost any great sum and are a good "starter" and they may be added to as the owner acquires skill and experience.

Maple Park, Ill. F. W. Barrow.

Wm. Galloway, Pres.

Let Me Save You $50 to $75

Let me save you $50 to $75 on the best portable elevator and wagon dump ever built. You can't buy a better built, stronger, faster working or handier outfit than the Galloway at any price, so why pay nearly twice my price to your dealer? Why not buy a Galloway direct on my positive 30-day free trial offer at my one-factory-profit plan and save $50 to $75?

Last year we were clear oversold before the season was hardly started. This year we are prepared to supply you promptly **if you get your order in at once.** Now, don't wait. You can't afford to be without a good portable elevator because it will pay for itself the first season. But don't buy a portable elevator of any size or make at any price until you get my big book telling you about the new Galloway.

Write Today for Low, Direct Factory Prices

Built with metal bottom, grain tight. Any length, 24 feet or more. Equipped for operating by sweep horsepower or gasoline engine. Simplest and most powerful hoisting arrangement ever used on any elevator—easier to raise and lower than any other. Will handle a load of corn or small grain in two to five minutes. Requires less power to operate. Power can be applied from either side. Wagon dump will work on either side. Is suitable for either single or double cribs. Has overhead lifts so you can use it at butchering time to advantage. It's just the outfit you have been looking for.

Write Today Without Fail

for low, direct prices. Get our big catalog telling all about it. Write now, before you put this paper down. Just address:

NEWS OF THE SALE RING

The Larson Duroc Sale.

An unusually large crowd of breeders attended the sale of O. S. Larson, Logan, Iowa, on August 7th and he dispose of forty-one head at an average of $72.43. Nineteen head of boars sired by King The Col. made an average of $98.50, the top being the two-year-old King The Col. Jr., who went to John Garis, Rhodes, Iowa, at $475. Mr. Garis had traversed the state the past three weeks looking for a boar and finally wound up by buying this splendid hog. The top of the spring boars were Nos. 30 and 21 that went to J. Wellendorf and Will Moderow at $115 and $135 respectively. Thirteen sows bred to old King The Col. made an average of $60. It was an unusually good sale, especially for this season of the year and Mr. Larson has every reason to be pleased with the outcome. Colonel Kraschel cried the sale. Below will be found a list of the sale offering:

1.	John Garis, Rhodes, Iowa	$475.00
2.	John Garis	70.00
3.	C. A. Zelmar, Atlantic, Iowa	60.00
4.	T. E. Giddings, Logan, Iowa	55.00
5.	Joe Seddons, Persia, Iowa	56.00
6.	Sam Stewart, Kinnard, Iowa	50.00
7.	T. E. Giddings	46.00
8.	H. E. Evenson & Son, Roland, Iowa	52.00
9.	Willard Robbins, Lyons, Neb.	64.00
10.	Henry Stuthman, Pilger, Neb.	67.50
12.	Wm. Moderow, Beemer, Neb.	65.00
13.	Oakwood Farm, Gorhman, Ill.	62.00
14.	Herman Toelle, West Point, Neb.	73.00
15.	Oakwood Farm	60.00
16.	John Carr, Logan, Iowa	36.00
17.	Willard Robbins	132.50
18.	Oakwood Farm	50.00
19.	Rude & Son, Moorehead, Iowa	36 00
20.	F. E. Merrick, Osceola, Neb.	125.00
21.	F. A. Schoefield, Columbus, Neb.	102.50
22½	Rumsey & Son, Washington, Neb.	72.00
23.	Henry Stewart, Missouri Valley, Iowa	41.00
24.	J. A. Kiddee, Osage, Iowa	40.00
25.	C. F. Johnson, Logan, Iowa	35.00
26.	J. W. Kent, Auburn, Iowa	51.00
27.	Chas. Leonard, Logan, Iowa	30.00
28.	Rude & Son	26.00
29.	A. L. Neville, Aurelia, Iowa	39.00
30.	J. Wellendorf, Algona, Iowa	115.00
31.	Wm. Moderow	135.00
22.	A. B. Dowlin, Maryville, Mo.	80.00
33.	John Thompson, Lake City, Iowa	85.00
35.	H. E. Wegter, Sheldon, Iowa	55.00
36.	J. J. Castle, Inwood, Iowa	72.00
37.	Geo. H. Willsie, Prosper, Minn.	85.00
38.	Rude & Son	32.50
39.	Carey Cameron, Herman, Neb	45.00
40.	Rude & Son	32.50

Swan & Ellis-Sells Sale.

The Duroc Jersey sale of Swan & Ellis and N. W. Sells, Indianola, Iowa, brought out quite a good attendance, but those that came were mostly looking for the very tops. The fall boar, I Am C.'s Wonder, went to Fred Swan at $240 and his litter brother was purchased by Waltemeyer Bros., at $272.50. The former boar was the larger of the two and he will make a great boar, especially for those who are wanting size and smoothness. The Waltemeyer boar was the former of the two, a trifle smaller and better in some points and it was a toss up with them as to what hog they really wanted. However, either one of these boars will have a great outcome to them and they were cheap at the price paid for them. The Sells Crimson Wonder Again litter out of H. A.'s Queen averaged $141.80. There were a lot of other good boars in the sale, some of which were from the good herd of Swan & Ellis, and Mr. Sells also had some that did not bring what they were worth, because as we said above those that came were mostly looking for outstanding herd boar material. The sows, many of which were very excellent were not appreciated like they should have been, possibly because of the earliness of the season. The average on everything was something over $50. Cols. Kraschel, Allen and Putnam cried the sale. We herewith list those that sold for $25 and above:

1.	Fred Swan, Missouri Valley, Iowa	$240.00
2.	Waltemeyer Bros., Melbourne, Iowa	272.50
3.	Waltemeyer Bros.	67.50
4.	Waltemeyer Bros.	65.00
5.	G. W. Mead, Corydon, Iowa	64.00
6.	W. M. Bartholomew, Indianola, Iowa	30.00
8.	H. S. Allen, Russell, Iowa	40.00
9.	A. B. Dowden, Maryville, Mo.	45.00
9½.	Theo. Foss, Sterling, Neb.	25.00
11.	C. L. McLaughlin, Panora, Iowa	27.00
13.	C. L. McLaughlin	25.00
16.	J. B. Ashby, Audubon, Iowa	50.00
18.	John Tupper, Woodbine, Iowa	44.00
21.	W. M. Bartholomew	30.00
22.	Ike Story, Indianola, Iowa	27.00
23.	W. M. Bartholomew	30.00
24.	J. S. Snethen, Davis City, Iowa	25.00
25.	J. O. Grof, Tecumseh, Neb.	56.00
26.	P. W. Weberg, Denison, Iowa	35.00
29.	H. J. Luymes, Boyden, Iowa	50.00
30.	W. A. Scholes, Onawa Iowa	44.00
32.	Lewis Kreitzberg, Griswold, Iowa	25.00
38.	H. S. Allen	26.00
39.	O. S. Larson, Logan, Iowa	45.00
40.	W. M. Bartholomew	77.00
41.	A. G. Weghter, Sheldon, Iowa	35.00
45.	Chas Bloomer, Joy, Ill.	28.00
49.	S. A. Strahn, Prole, Iowa	38.00

Adams' Poland China Sale.

C. F. Adams, Owasa, Iowa, held his sale of big-type Poland Chinas as previously advertised in this paper. Several of the best sows in the sale were fine specimens of the best in big-type Polands and sold much below their value. Zock Kinne, Michigan, secured two excellent sows in Nos. 3 and 4 at $115.00 and $127.50 respectively, as did Frank Pemberton in No. 19 at $115.00. Mr. Adams entertained the crowd well and conducted the sale in his usual straight-forward, business manner. Cols. W. B. Duncan and W. H. Cooper did the selling in a highly satisfactory manner. A list of those selling above $40 is appended:

2.	Wm. McBride, Alden, Iowa	$ 40.00
3.	Zock Kinne, Three Oaks, Mich.	115.00
4.	Zock Kinne	127.50
5.	Wm McBride	57.50
6.	Ed Herring, Laporte City, Iowa	80.00
7.	Wm. McBride	75.00
8.	Wm McBride	50.00
9.	Wm. McBride	47.50
11.	D. R. Keefer, Mt. Carroll, Ill.	70.00
13.	Mr. Sager, Owasa, Iowa	40.00
15.	Chas. Jackson, Owasa, Iowa	47.00
18.	F. W. Trickey, Owasa, Iowa	62.50
19.	Frank T. Pemberton, Iowa Falls, Iowa	115.00

CORN HARVESTER with Binder Attachment cuts and throws in piles on harvester or windrow. Man and horse cuts and shocks equal with a corn Binder. Sold in every state. Price $20. W. H. Buxton, of Johnstown, O., writes: "The Harvester has proven all you claim for it; the Harvester saved me over $25 in labor last year's corn cutting. I cut over 500 shocks; will make 4 bushels corn to a shock." Testimonials and catalog free, showing pictures of harvester. Address
NEW PROCESS MFG. CO., SALINA, KANSAS

ADDITIONAL FIELD NOTES.

Storm Lake Silo at State Fair.

The Storm Lake Tub & Tank Company will make an interesting exhibit at the Iowa State Fair. It will include a full line of goods turned out by that concern, and in particular the Storm Lake silo with its hinged door, which is especially valuable. This door is air tight, easily and quickly detachable and has other good qualities. Be sure to see the exhibit or write to Storm Lake Tub & Tank Co., Storm Lake, Iowa.

The Bovee Furnace Announcement.

When a farmer buys a Bovee furnace he saves from $30 to $50 over the ordinary cost. More than that he secures a furnace that will burn any kind of fuel economically and at a saving which will in a few years pay for the entire cost of installation and still have a heater that will last for years. The manufacturers of the Bovee will be glad to give any required information. Write to them giving plan of building. Address Bovee Furnace Works, 204 Eighth St., Waterloo, Iowa. See advertisement on page 20.

SalTone at the Fair.

The SalTone exhibit of stock food and Hampshire hogs from the SalTone Stock Farm will be among the interesting sights at the Iowa State Fair. SalTone is a compound manufactured under the direct supervision of John E. Robbins who for thirty years has been a well-known and successful breeder of live stock. His hogs which made good winning at the International Live Stock Show, in Chicago, last December, are being shown at the fair this year to give Iowa farmers an idea of Mr. Robbins' success as a stockman, and also to show the excellency in live stock produced by SalTone. The John E. Robbins Company, Greensburg, Ind., distributors of SalTone, have a large advertisement on page 11 of this week's issue.

Canada Field Crops.

Advices from western Canada indicate that this year's crops are remarkable in both yield and quality. Up until a very recent date the natural possibilities of western Canada soil were an unknown quantity. The investigations of farmers together with the assistance of the Ontario Agricultural College have been successful in developing the agricultural resources of Canada until today they occupy a most important position in the producing world. A number of books presenting these facts and others have been published by the Canadian government and may be obtained by addressing a request to M. A. Thornton, Colonization Agent, Canadian Pacific Railway, Chicago, Ill., or either of the addresses named in the advertisement on page 16.

Free Trips to the Fair.

The Strong Electric Company, Des Moines, Iowa, who will have a very good exhibit on the state fair grounds, offer to pay the fare of all visitors to their exhibit who buy any time during this year. The only stipulation they ask is that the copy of the advertisement which appears on page 18 of this issue be brought to the exhibit. This company has taken this means of securing actually interested parties who are contemplating buying a lighting system. The Strong electric plant which will be shown at the fair has a great many good features and runs with little attention. The plant has been worked out for farm use and it is giving satisfaction everywhere it is installed. If you contemplate buying an electric lighting system this fall do not fail to see this system while at the fair and if you buy it will operate as a means of securing your fare free.

See the Kalamazoo.

At the Iowa State Fair will be found an exhibit of the Kalamazoo center shear cutter and silo fixtures. The sickle-edge knives of this cutter will handle alfalfa, cutting it one-eighth inch in length, making ideal feed for stock and poultry. See advertisement on page 13 of this issue.

Winton Seed Corn Rack.

This rack is claimed by the manufacturers to be the only rack suitable for use in connection with a seed tester. It will be exhibited at the Iowa State Fair. This is an excellent rack, and we would suggest that all our readers interested look up the exhibit. See advertisement on page 13 of this issue.

The One Minute Exhibit.

One of the most interesting exhibits to be seen at the Iowa State Fair will be the exhibit of the One Minute Manufacturing Company, Newton, Iowa, manufacturers of washing machines, grain graders, manure spreaders and others goods. The well-known Newton grain grader and cleaner will be shown in actual operation. Dirty grain will be cleaned, separated and graded. This machine separates oats from wheat, weeds from clover and grass seed. We would suggest that our readers who are interested in planting good seed on their high-priced land look up this exhibit. See advertisement on page 13 of this issue.

SHEEP

ELK GROVE SHROPSHIRES

I AM offering thirty choice rams for sale. Twenty-four yearlings, five two year olds and one five year old, bred by Henry L. Wardwell. Prices $25.00 to $50.00. Address

FIELD MEN.

M. T. White, western Iowa and Nebraska (north of the Platte river). Address 4015 Izard St., Omaha, Neb.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

A. T. Cole, Missouri, Kansas and Oklahoma. Address 3900 Holmes St., Kansas City, Mo.

John C. Halderman, Kansas. Address 4347 Harrison St., Kansas City, Mo.

J. C. Price, southern and western Nebraska. Address 145 So. 28th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

H. S. Hoard, Wisconsin. Address Room 201 Washington Building, Madison, Wis.

FIELD NOTES.

The advertisement of Bert A. Randell, Mt. Zion, Iowa, offering Chester White boars and gilts and Shropshire rams for sale appears on page 26.

Chester White spring boars are advertised for sale by A. C. Orme, Nodaway, Iowa, on page 29. He is making specially low prices on these boars. Write him your wants right away, and kindly mention The Homestead.

On page 22 is the advertisement of B. F. Clark, Albia, Iowa, quoting prices on registered yearling Lincoln rams. Mr. Clark writes that he has ten very choice ones sired by a 350-pound ram and out of choice large ewes.

Davenport & Mack, breeders of Poland China hogs, Belmond, Iowa, announce on page 26 that they are now prepared to sell some extra good boar pigs. They are of big lines of breeding, thrifty and right every way. Write for prices.

Some very choice Red Polled heifers, bred to the champion bull, Ruperta's Goods, are advertised for sale by Frank J. Clouse, Clare, Iowa, on page 27. He also offers some good young bulls for sale. Write him about these right away or go and see them.

Seven head of good Duroc Jersey fall boars and thirty head of spring boars are advertised for sale by Henry E. Wegter, Sheldon, Iowa, on page 31. These go at from $25 to $40 while they last and if you want a good one send your order to him at once and kindly mention The Homstead when doing so.

Fifty choice Duroc Jersey boars are advertised for sale by Heiko Gruis, George, Iowa, on page 31. He is pricing these at $25 and $30 and they are cheap and good. If you order now you will be able to get one of the pick of the bunch. He has a corking good bunch of pigs and he will guarantee satisfaction. When writing Mr. Gruis kindly mention The Homestead.

A. L. Robison, Jr., of the well-known Percheron firm of A. L. Robison & Sons, Pekin, Ill., has arrived home from France with an importation of Percheron mares, all young ages, that were the best that could be found in France. Mr. Robison also brought over an outstanding young stallion for use in the Leslie Farm stud. The mares included in this importation will be offered to the public at the annual Leslie Farm sale in December.

Before the winter season begins every home should be equipped with a kitchen appliance which will make the women's work as pleasant as it is possible for that work to be. The best and strongest point in the equipment is a Monarch Malleable range such as is advertised on page 18. Read the arguments presented in favor of it and then if you want to take advantage of the special offer mentioned write at once to Malleable Range Co., 356 Lake St., Beaver Dam, Wis.

In an advertisement on page 31 F. Christensen offers for sale Duroc Jersey pigs of spring farrow and a number of sows bred for August and September litters. Mr. Christensen has a herd of nearly 300 head on his farm and is reserving all his spring gilts for his winter sale which promises to be one of unusual importance. Some of his brood sows weigh up to 750 pounds and all carry the best strain of blood. Address F. Christensen, Fairmont, Minn., and kindly mention The Homestead.

W. H. Hurd, Collins, Ohio, wants to get prices on Single Comb White and Brown Leghorn pullets. His advertisement appears on page 17.

John Krebs, Riverside, Iowa, is offering some big, smooth, heavy-boned Duroc Jersey boars for sale on page 31. He can please you at a very reasonable price.

Hugh M. Ficke, Long Grove, Iowa, can supply some extra good fall Duroc Jersey boars with size and quality. He also has some extra good spring pigs by some of the most noted boars of the breed.

G. F. Marshall, Monroe, Iowa, will be at the Iowa State Fair with a good lot of spring pigs sired by Giant King and Jumbo Giant. He has March pigs weighing 200 pounds and will be glad too see anyone interested when at the fair.

For high-grade Holsteins cows, well marked and due to freshen soon, write W. C. Kenyon & Son, Elgin, Ill., whose advertisement appears on page 15. They can furnish one or a car load. Kindly mention this paper when you write.

C. J. C. Cold, Berlin, Iowa, announces a dispersion sale of his Scotch and Scotch-topped Short-horns to take place at his farm on October 21st. Mr. Cold has sold his farm which necessitates closing out the cattle. Full particulars will appear in this paper in due time.

The Huber Peterson Mfg. Co., Cresco, Iowa, will make a complete exhibit of Cresco all-metal and portable corncrib at the Iowa State Fair of next week. These cribs are made in all sizes and widths. They afford perfect ventilation and protection from rats as well. If unable to see the exhibit write for particulars to Huber Peterson Mfg. Co., Cresco, Iowa.

G. W. Curtis, Winterset, Iowa, announces on page 15 that he is prepared to sell Holstein-Friesian cattle at very reasonable prices. He has two pure-bred bull calves, a few pure-bred cows and heifers and a number of high-grade cows and heifers. Most of the latter are due to be fresh this fall. For additional descriptions write to the address named.

M. S. Pratt, Frederika, Iowa, offers yearling Duroc Jersey boars sired by the International grand champion, Volunteer, and out of a daughter of Mc's Dream, the grand champion sow at the same show. He also has a yearling by Model Wonder and one by Proud Ohio Chief. Mr. Pratt has a fine lot of spring pigs of the very best breeding for sale. See page 31.

The Cushman motor has ably demonstrated its value on the binder. Now it appears that it is equally as worthy of use as a power for operating the corn binder on the ensilage cutter. See the advertisement of the Cushman people on page 8 of this paper and for additional facts that should be in the hands of every farmer write the Cushman Motor Works, 2029 N. St., Lincoln, Neb.

The Goodyear people make an important announcement concerning Goodyear tires on page 6 of this paper. Everyone who has had tire trouble will appreciate the fact that Goodyear No-Rim-Cut tires at the same price as others are rare bargains. Read the advertisement. For particulars, description and reasons for the reduced prices address the Goodyear Tire & Rubber Company, Akron, Ohio.

Jurgen Schmidt, Everly, Iowa, the well-known breeder of Duroc Jerseys reports 125 head of spring pigs and he ha ssome good ones. The most of these are sired by Col.'s Model, a son of Col. Grant, and out of a W. L. A.'s Choice Goods sow. This is a most excellent boar and he has done splendid service in the Schmidt herd. He will have some good boars to offer the trade a little later in the season.

Twenty big-type fall Poland China boars are offered for sale by E. W. Kreischer, Mt. Vernon, Iowa, one page 30. They are sired by the 1,060-pound boar, Mastodon Chief, (used so successfully in the W. W. Wheeler herd) and Tecumseh Prince. These boars are large, heavy-boned, smooth fellows and will please anyone wanting a good boar at a reasonable price. Write for price mentioning The Homestead.

The A. A. Berry Seed Company, Box 103, Clarinda, Iowa, advertises high-yielding winter wheat of the Kharkov variety on page 13. Some growers say that it has yielded from seventy to seventy-five bushels per acre, while the Kansas Agricultural State College reports forty-seven and one-half bushels as a three-year average, and the Nebraska Experiment Station 66.9 bushels. For prices or other information write to the address given above.

The popularity of Sal-Vet as a worm destroyer and conditioner is rapidly growing in all communities in which it is introduced. It is well understood by stock growers and especially by hogmen that if worms be destroyed there is 50 per cent more chance for thrifty and profitable growth and an added strength of vitality which protects the hog from the attacks of ordinary disease. Sal-Vet is advertised on page 32 The advertisement contains testimonials from a number of hog raisers who have given it a trial and whose evidence should be accepted as proof of its value. The manufacturers are offering to send this preparation on trial to any readers of this paper. The particulars are set forth in the advertisement. All that it is necessary to do is to fill out the coupon in the advertisement and forward it to the S. R. Feil Co., Dept. I H, Cleveland, Ohio.

The National Lead Company places an announcement on page 21 of this issue that is not only attractive, but a source of information as well. It tells just why Dutch Boy White Lead is the kind that preserves wood and extends the length of its attractiveness. A handy book on painting together with other information of value to the farmer may be obtained by writing the National Lead Company, Chicago, Ill.

Now that the harvest season is over farmers have time to turn their attention to the various means by which they may better their business and add to their incomes. The Flour City tractor advertised on page 13 presents an opportunity that will accomplish both these ends. An extensive exhibit of the Flour City in three sizes will be found at the coming Iowa State Fair. Other facts referring to it may be obtained by writing to Kinnard, Haynes Company, 857 44th Ave., Minneapolis, Minn.

In the fall most farmers give more or less attention to such buildings as may be needed on their farms. Buildings of the sort in question demand the use of lumber and other building materials such as are advertised on page 12 by the Peter J. Seippel Lumber Company. This firm produces lumber direct from the tree and by this manner of production is able to give the buyer the benefit of the reduced cost of making and handling. Read the advertisement carefully and before building write to Peter J. Seippel Lumber Co., 204 So. Locust St., Dubuque, Iowa.

Scotch Collie pups of strictly high-class breeding are offered for sale by Chas. Irvine, Ankeny, Iowa. They are by an important sire that was a reserve champion at the Chicago show and at a show at Columbus, Ohio. The dam was an imported animal that was a member of the exhibition lot of Scotch dogs shown at the various state fairs last year. She was the dam of three pups that were winners in a field trial in Scotland last year. These pups are of both sexes, six months old and will be sold at very low prices. A few Beadle hound pups are also for sale. Address Chas. Irvine, Ankeny, Iowa.

The Positive Tire Vulcanizer Company, Davenport, Iowa, are putting out a device for vulcanizing that shoulld be in the hands of every farmer owner of an automobile. The device acts upon the same principle as the big vulcanizers in tire factories, but it has been simplified so that any farmer may use it and do a perfect job. Most automobile owners have had experience which will convince them that an implement of this sort will pay for itself in a single season. Repairs of a tube or casing may be made in twenty minutes or even less. The device weighs but three pounds and it is sold at a remarkably low price. Further information may be secured by writing to the address given above.

Frank T. Pemberton, Iowa Falls, Iowa, claims October 10th as the date for a dispersion sale of his herds of Short-horn cattle, Percheron horses and Poland Chinas. Serious illness in his family necessitates his leaving the farm and dispersing his pure-bred live stock. The offering will consist of fifty Short-horns, forty of which are of the best Scotch breeding; eleven Percherons, seven of which are young mares safe in foal and fifty Poland Chinas which consist of fall boars and sows and a few spring boars. This sale will afford many bargains as does any sale where so much stock is to be sold in one day and for this reason everyone interested should keep this date in mind. Full particulars will appear in later issues of this journal. Send Mr. Pemberton a postal asking him to place your name on file for a catalog and when so doing kindly mention The Homestead.

John Justice, Ankeny, Iowa, is one of the breeders of Duroc Jersey hogs who always has something on hands of high quality, although he seldom makes much noise about it. This year he has better than 100 March and April pigs, all excepting one litter of which are by Cherry Boy, a hog of unusual conformation, good bone, up-standing legs and strong feet. Cherry Boy is by Chief's Model, he by Model Chief His dam was a daughter of Golden Chief, he by Golden Model and his second dam a Crimson Wonder bred sow. The blood lines and the crosses are those which have been productive of the greatest prize winners and most excellent breeding animals. The dams of the crop of pigs are largely of Model Chief and Crimson Wonder strains. They are good ones and they have produced a lot of pigs that cannot fail to prove satisfactory to discriminating buyers. A few weeks later announcements concerning these pigs will appear in our advertising columns.

Schug's Poland China Boars.

On page 26 of this week's issue we begin the advertisement of Robt. A. Schug, Coleridge, Neb., who is offering forty head of his large-type Poland China boars for sale. Mr. Schug formerly owned the grand champion boar, King Mastiff, and he has quite a few boars and sows by him and he is offering some of these for sale. He is also offering boars sired by Great Columbus, Nebraska Model and Model Goliath. Some of these boars are out of daughters of King Mastiff, and the dams of these are among the very best that Mr. Schug has in his herd. If you want a good boar you can certainly buy one of Mr. Schug and the time to do it is right now. Write him at once for price and description of these

boars and kindly mention The Homestead.

Herdsman Wanted.

A good herdsman who is a good feeder to prepare cattle for a sale is wanted by J. R. Horswell, Estherville, Iowa. Write him at once and mention The Homestead.

Rainler's Shropshires.

If any of our readers want a good Shorpshire ram they should write Frank Ranler, Logan, Iowa, who is offering thirty head of these for sale. He has an imported ram in the bunch that is one of the best in the country. He is pricing these at from $25 to $50. Write him at once and mention The Homestead.

French's Belgians at State Fair.

R. F. French, Independence, Iowa, will make an exhibit of high-class Belgians at the Iowa State Fair next week and the following week. He will have a string of stallions and mares that will look good to a horse judge. He will be pleased to meet all interested and show them his horses. See the advertisement on page 2).

Thompson's Durocs.

Will Thompson, Jesup, Iowa, offers ten fall Duroc Jersey boars for sale on page 31. These boars are sired by Victor 3d, a Golden Rule bred boar and are out of sows that trace to Prince of Cols., the noted sire of champions. These boars are large, smooth fellows and Mr. Thompson is pricing them right and guarantees them to please anyone who orders one by mail. Write him for prices mentioning The Homestead.

Some Fine Farm Buildings.

August Toepfer, Madison, Wis., a son of one of the prominent Holstein breeders of southern Wisconsin, has just completed one of the finest dairy barns of the state. The barn is 36x160 feet, with a concrete basement. The equipment is steel, and the floors are of concrete. It is well lighted on all sides, and in every respect is an ideal dairy barn. Mr. Toepfer has a small herd of pure-bred Holsteins which he is increasing rapidly.

King Gano 13311.

Those of our readers who want to see a great yearling boar should see King Gano 13311, the most sensational Duroc Jersey yearling of the year and the greatest living son of Col. Gano. He weighs 725 pounds, is smooth as an apple and a wonderful breeder. See him while you attend the Iowa State Fair and buy one of his sons. He is owned by that well-known breeder, O. E. Osborn, Weston, Iowa, who will show him at Des Moines. He will have some splendid spring boars by him at the fair.

Forty Duroc Boars for Sale.

With this week's issue we begin the advertisement of B. W. Hunt, Denison, Iowa, who is offering forty Duroc Jersey boars for sale. Among these is fifteen head of fall boars and the remainder are spring boars. These are sired by the 1,000-pound boar, C. H.'s Special, King The Col., Grand Chief, Gold Dust Prince and Model Advance. He is prepared and ready to ship these boars at any time and will be pleased to hear from Homestead readers who are on the market for a Duroc Jersey boar. When corresponding with him kindly mention The Homestead.

Fitch's Poland China Boars.

With this week's issue we begin the advertisement of John H. Fitch, Lake City, Iowa, who offers thirty-five head of big-type Poland China fall boars for sale. These are sired by the splendid boars, Giant King, Black Kruger and Jumbo Chief. These boars are bred in the strictly large-type lines and are out of sows that will weigh from 700 to 800 pounds. He also has some good spring boars. He is offering to sell these boars at from $25 up and if you send him an order now you will be sure to get a good one. When writing Mr. Fitch kindly mention The Homestead.

Fairbanks, Morse & Company at the Fairs.

Faibanks, Morse & Company will start out on their annual educational tour the week of the Iowa State Fair. They will show in addition to their regular display of farming implements a complete residence electric lighting plant, complete residence pneumatic water system, Fairbanks-Morse fresh water systems, portable engines, oil tractors, etc. The exhibits will be found at the Iowa State Fair, Nebraska State Fair, Ohio State Fair, Interstate Fair at Sioux City, Michigan State Fair and Illinois State Fair.

Justice's Turkey Red Wheat.

On page 13 John Justice advertises the fact that he has for sale quantities of Turkey Red wheat. In a letter ordering this advertisement Mr. Justice writes: "For about thirty years we have been growing winter wheat with but one failure, and for several years have been trying to encourage farmers in general to raise more of it in the place of oats, for it is less liable to fail. Last year was our bumper crop for winter wheat in this section, many pieces making fifty bushels per acre and better. And while it seems that this year we are taking a step backwards in the wheat yield, yet it is a much better paying crop than oats. Most wheat is making about the same number of bushels per acre as oats, twenty-five to forty bushels per acre. Our wheat is pure and clean, free from other grains or weed seed. Best grain sacks furnished free at $1.10 per bushel. Ask for free sample and try a patch this fall from our own grown Turkey Red seed. One who holds the highest record at the state and county shows. Meet us again at the Iowa State Fair this fall in the agricultural building and inspect our samples."

Sexsmith's Polands.

When you go to the Iowa State Fair make it a point to see Fred Sexsmith and his good pigs that he will have with him. He will have some of those good Big Orient boars with him and the man that is going to want a real herd header will like them. He will be at the fair and he will have the glad hand out for all the boys when they come around.

Holstein Cows and Heifers.

Sixty-five head of registered Holstein-Friesian cows and heifers are advertised for sale by the Rock Brook Stock Farm, Station B., Omaha, Neb., on page 15. These are nearly all due to calve in the fall to Sir Pontiac Ragapple Korndyke, or a son of King of The Pontiacs. Special prices are being made on these cows and heifers for the next sixty days. They also have a few serviceable bulls for sale. Write about these at once and kindly mention The Homestead.

Handlon's Chester Whites.

L. I. Handlon, Farmington, Iowa, is advertising fall boars, winter and spring pigs of both sexes for sale at reasonable prices, on page 28. Mr. Hanlon has the best bunch of pigs he has ever raised; his herd is headed by St. Patrick, a great yearling boar bred by Wm. Hoover. Mr. Hanlon would price this boar to someone wanting a high-class herd header. The boars he is offering are good in the back, head and feet and well quartered. His boars are of fall farrow as well as some January boars and gilts and March and April springs pigs

Cyrus A. Tow's Herefords.

Cyrus A. Tow, Norway, Iowa, is a gentleman who is widely known as a breeder and exhibitor of Hereford cattle and more particularly of the Disturber family. Since the purchase of Disturber and much of his progeny Mr. Tow has been extraordinarily successful in the leading show yards of America and a demand for his stock has come from every state where beef cattle are raised. Mr. Tow will have a full herd out on the circuit this fall starting at Des Moines and ending at the International Stock Show. His show herd is in fine condition and he will have strong contenders for the leading prizes in each class. He will show a herd of pure-bred steers and a herd of grade steers. The grade steers are an ocular demonstration of the value of pure-bred bulls in the production of prime steers. On October 21st Mr. Tow will sell at auction sixty-five Herefords, consisting of twenty-five bulls and the balance cows and heifers. Full particulars of this event will appear in later issues of this journal.

Sam Stewart's Durocs.

For those Duroc Jersey breeders who are going to want something good this fall we will say see the herd of Sam Stewart & Sons at the Nebraska State Fair and take a look at the many good things they will show you. They had intended showing at Des Moines, but have changed their mind and will meet the boys at Lincoln. The Stewarts have bred some splendid Durocs and some of the greatest boars that have been used at the head of some of the best herds in Iowa and Nebraska were bred by this firm. One of the best boars that the Waltemeyer Bros. have had in recent years was the hog they purchased at the Iowa State Fair from Mr. Stewart last fall and by far the best boar that Oran Stevens ever owned was a full brother to the Waltemeyer hog. Sam also bred to a dam of Jack Ashby's 1,055-pound boar, Colonel Sensation, and they have bred many others that are in the same class. Make it a point to see the Stewart herd when you go to the Nebraska State Fair. They will make a public sale on October 14th when they will offer a grand good lot of boars of the strictly herd-heading kind.

Affairs at Pioneer Stud Farm.

John G. Truman, of the Pioneer Stud Farm, Bushnell, Ill., writes: "We had a very pleasant visit from our old customers, E. L. McClurkin & Son, Louisa county, Iowa. These gentlemen were looking for the very best Shire and Percheron stallions that they could find and were looking especially for grays. We sold them a dapple gray imported Shire stallion and a dapple gray imported Percheron stallion. Both of these horses have weighed while in our possession over 2,200 pounds each. Another of our old customers from Louisa county, Iowa, C. A. Blanchard, was on the lookout for the best young Percheron stallion that he could procure and he finally selected one of our very best colts that we were exhibiting at the Iowa State Fair. Mr. Blanchard has a stud of pure-bred Shire mares and is an old and valued customer of ours. To Dan Jordan and Arthur Blackburn, Marshall county, Iowa, we have sold a pair of imported Shire mares. We have also sold to Samuel Insull for his Hawthorn Farm, a yearling Percheron filly sired by Intitule, which horse stands at the head of the Hawthorn Farm Percheron Stud. This filly is one of the grandest animals it has been my pleasure to see. Plenty of weight and backed up by more quality than I ever saw on a yearling Percheron filly. She has been greatly admired by a number of Percheron breeders who have seen her. We also sold the same gentleman the imported Percheron mare, Ironie, a beautiful drak dapple gray mare, weighing considerably over a ton and only recently imported. She is extraordinary wide and deep, beautiful head and neck, set on oblique shoulders; good back and strong loin, standing on the very best of feet and joints. We predict a great future for this mare and we hope to have the pleasure of seeing her in the Hawthorn Farm exhibit at the Illinois State Fair and International this year. These two grand animals will greatly strengthen the Percheron stud at Hawthorn Farm."

A Fine Jersey Bull.

The Jersey herd of Otto Walters, Waupun, Wis., is headed by the imported bull, Swift of Oaklands 88009, a son of Nobles of Oakland who sold at the Cooper sale for $15,000. Mr. Walters' herd is practically all of the St. Lambert strain.

Choice Fall Boars.

On page 31 G. C. Everts, Audubon, Iowa, advertises twenty head of excellent Duroc Jersey fall boars for sale sired by Golden Model 3d and the low price of $25 to $50 takes them while they last. He also has fifty head of good spring boars and he is booking orders for these at from $25 to $35. If you want a good boar at a reasonable price send your order to Mr. Everts at once and kindly mention The Homestead.

Adams' Big-Type Polands.

C. F. Adams, Owasa, Iowa, is making special prices on boars and gilts of spring farrow, for the next thirty days. He has a grand lot of them sired by Mammoth Jumbo, by Big Jumbo, Maid's Halver 1st, a son of Big Halver and Long Maid, Adams' Big Hal and Long Columbia. These pigs are out of a herd of sows that are hard to equal for size, smoothness and heavy bone. A representative of this paper recently looked over these pigs and he has seen no growthier, or healthier pigs this season. We know that anyone who will send Mr. Adams an order for one of these pigs will be well pleased, and the better judge he may happen to be the better he will be pleased. Mr. Adams has the goods when it comes to big-type Polands. It is worth while for any of our readers who can to visit his farm and look over his herd. If you want to buy a good boar look up his advertisement on page 30, write him for prices, and send him your order.

Davidson and His Crimson Wonders.

Our old friend, U. G. Davidson, is now located at Algona, Iowa, where he still persists in raising a few of his favorite Duroc Jerseys and he still clings to much of his famous old Crimson Wonder blood. He has Golden Model at the head of the herd, who in turn is a descendant on the dam side from a Crimson Wonder sow. His other boar is Crimson Wonder Am I, and he is a son of Crimson Wonder I Am. He is an intensely bred Crimson Wonder boar and he is siring him some good pigs. In fact, both of these boars are doing well for him. He has nine fall boars on hand that are sired by Golden Model Jr., out of Crimson Wonder I Am dams, and he has some that are going to make good herd boars. He also has twenty spring boars that are sired by Golden Model Jr. and Crimson Wonder Am I. You cannot lose Grant Davidson in the Duroc Jersey shuffle and he has bred as many right good ones as the best of them. He will be pleased to hear from Homestead readers at any time or would like to have them call and see him.

Horswell Disperses Angus.

On October 1st, at his farm near Estherville, Iowa, J. R. Horswell will make a dispersion sale of his well-known Aberdeen Angus herd, comprising in all about eighty or ninety head of cattle. There are many good things in his sale, including a splendid lot of Blackbird, Trojan Erica and K. Pride cows and his splendid herd bull, Black Ensign. This bull is a four year old and is a son of the noted Black Woodlawn. His dam is Ellore by the great bull, Western Star. His second dam was a daughter of Esmond of Ballendalloch and he was a son of the noted bull, Iliad. He is a Blackbird-topped Trojan Erica, a splendid individual and just such a bull as most of our breeders should have at the head of their herd. This bull was a prize winner at both the Iowa State Fair and the International without any special feeding. It is, we presume, the last chance that breeders will ever get to buy as good a son of the mighty Black Woodlawn as this bull is and we hope that Angus breeders will not make the mistake to overlook this bull when sale time comes around. We will tell you more about the Horswell offering in later issues of The Homestead. In the meantime write him for catalog and kindly mention this paper.

Good Horses at State Fair.

At the coming Iowa State Fair C. G. Good, importer and breeder of Belgian and Percheron horses will make an extensive exhibit of animals of those breeds. Some of them are from the importation made this summer and of a necessity they will be somewhat thin in flesh although they are right in quality and breed characteristics. Some of them are very large. A three-year-old stallion will go into the ring at 2,100 pounds. He has wonderful bone and promises when fleshed up to develop into a remarkable animal. There will be two year olds, three year olds, and four year olds, both stallions and mares. The colts in particular are a choice lot, among them some good enough to go into any company. An illustration on another page show three of the good stallions from the late importation. Mr. Good makes a special invitation to all readers of this paper to visit his stalls at the Iowa State Fair and inspect his horses. Of course, while he wants to sell he is more particular just at the present time in having people visit him and see the character of the stock of which his importations are composed. He will also be glad to entertain visitors at his home farm at any time. He is located at Ogden, Iowa, on the main line of the Chicago, Northwestern Railway and on the Minneapolis and St Louis Railway, with excellent facilities for getting in and out without loss of time from any direction. Address inquiries to C. G. Good, Ogden, Iowa.

Eugene Haws' Shropshires.

With this issue of The Homestead, Eugene Haws, Charleston, Neb., is starting an advertisement in which he offers a number of Shropshire rams and a few ewes. Mr. Haws is pretty well known to Home tead readers and those that have purchased breeding stock of him in the past are the best reference that he has, but we wish to add that the stock that he has for sale is of such high quality and of such breeding that they are bound to please those looking for the real good stuff, and the prices are as low as one can afford to grow them. We have come in contact with this strain of stock in different hands and in all cases giving the best satisfaction. An order placed immediately will be a good business move, and when writing Mr. Haws, kindly mention The Homestead.

L. B. Williams' Polands.

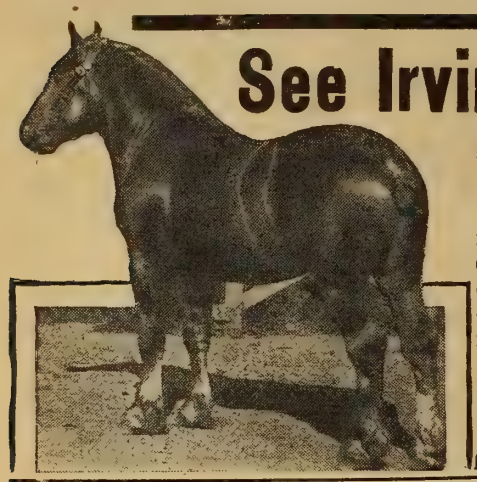
On November 6th, L. B. Williams & Sons, Villisca, Iowa, will make a public sale of forty head of their large-type Poland Chinas, and they will have a far better offering than they put up last year. They will make the sale at Sciola, Iowa, their nearby town on the Atlantic Northern & Southern railroad, unless they should change their minds before that time. They have a splendid crop of big, stretchy spring pigs—ninety head in all—and they have great size and length this year. In fact, they are far ahead of their pigs at this time last season, and if everything goes right they expect to sell the best bunch they have ever offered. They have twenty-three head of fall boars and sows and five summer sows that they expect to put into this sale. These are sired by W.'s Quality, a son of the great Blue Valley Quality; Orphan Wonder, a son of The Big Orphan; Big Tom Jr., a son of the prize-winning boar, Big Tom, and a few by New Tecumseh and Big Orient. We will tell you more about their offering later in the season.

Calkins' Duroc Jerseys.

One of the younger, but well-bred Duroc Jersey herds in northern Iowa, is owned by E. A. Calkins, Ruthven, and while his crop is not large this season, he nevertheless has some good ones. He has for herd boars, Prince The Col., a son of old Prince of Cols. and out of a dam by Shafer's Col. He is a line bred Prince of Cols. boar and a very good one. He has plenty of stretch, a good back and good bone and he is siring him a good lot of pigs. His other boar is Wonderful Crimson Lad, a grandson of the champion Crimson Wonder Again. He has pigs by both of these boars, also by Freed's Col., Model Advancer, Dusty Wonder and some fall boars by the noted boar, Volunteer and Royal Col. Mr. Calkins has collected a splendid assortment of brood sows, among which are daughters of Prince of Cols., Shafer's Col., Superba, Chief's Col., B. & C.'s Col., King The Col., Crimson Wonder Again and Model Advancer. Three of his fall boars are sired by the noted boar, Volunteer, and are out of a Superba dam, and four are sired by Royal Col. and are out of a Freed's Col. dam. He will be pleased to hear from his farmer and breeder friends at any time, and will quote them prices on either spring or fall boars. When you write him kindly mention The Homestead.

Irvine's Belgians at State Fair.

One of the greatest horse exhibitions at a great horse show will be that put up by Chas. Irvine, Ankeny, Iowa, at the coming Iowa State Fair. It will include forty head of big Belgian and Percheron stallions and mares. In particular the Belgian consignment is one of unusual interest and importance. It includes Frison, Falcon 2d and Mon So Hoit, three stallions which Mr. Irvine imported particularly for use on his own farm. Others possessing perhaps as much merit will be presented and offered for sale. Frison is a beautiful sorrel two year old that won medals in Belgium before having been imported. He has promise of development into a massive fellow with all the bone necessary to carry heavy weight and general excellence of draft character. Falcon 2d is also a sorrel two year old, a little more flashy in color, a good mover with heavy bone, good quality of feet with promise of size and at the same time carrying the popular American type. Mon So Hoit is also a two year old and a sorrel, a little lower in type with wide clean bone, extra good feet and an impressive character that cannot fail to strike the lover of good horses as being about right. The entire consignment, however, carries size and weight with ruggedness and evidence of maturing into just what buyers are now demanding. Robert 2d De Rum that has for five years occupied a leading place on this farm and each year been a prize winner at the Iowa State Fair, will now be offered for sale. He is of the right type and will weigh 2,200 pounds, being sound in every respect. There will be younger stallions down to suckling colts, all of which show extra quality, having show-yard type and general attractiveness. Among the Percherons will be a two-year-old stallion that has every evidence of development into a 2,400-pound matured form. He is a dark gray, clean boned and at present a little thin in flesh. The mares of which there will be about twenty head will fill all classes. Some of them are weighing up to 2,150 pounds in their three-year-old form while the two year olds will tip the scales at 1,800. We might go into further details with respect to this show lot and still re-



See Irvinedale Horse Show at Iowa State Fair

40—Belgians and Percherons—40

I will make a complete show of imported and home-bred Belgian and Percheron stallions and mares, from mature animals to sucking colts. Prize winners at Chicago, Des Moines and Sioux City, and holders of medals won in Belgium. Stallions with established breeding records. Mares of proven producing capacity. Colts with wonderful promise. They have size, bone, draftiness, and true breed type and character. They are not fleshed up, but are thrifty and coming. Every one carries a veterinarian's certificate of health and soundness. High quality and low prices rule in my barns. Come and see them. An automobile will be at the barn ready to take you to Irvinedale Farm if you want to go.

Chas. Irvine, IRVINEDALE FARM, Ankeny, Ia.

main within the limits of what could truthfully be said, however, we want every reader of this paper who attends the Iowa State Fair to visit Mr. Irvine's barns and make a personal inspection. The horses are right and they will be sold right.

Weberg's Bred Sows and Boars.

On page 31 will be found the advertisement of P. O. Weberg, Denison, Iowa, who is offering thirty choice Duroc Jersey boars for sale and ten head of good sows bred for fall litters. At the head of the Weberg herd stands two great boars, Crimson Wonder 3d, the grand champion boars at Nebraska and Illinois State Fairs and he is offering sows bred to this noted hog. He also has some splendid spring boars sired by him and these are strictly all right. He is offering these at prices that are strictly right for the man that is in need of a boar that will be a credit to head his herd. He also offers some good sows bred to C. H.'s Special. This is the boar that weighed about 1,000 pounds when he was shown at Des Moines and is one of the best breeding boars today in the West. Mr. Weberg also offers some splendid fall boars sired by C. H.'s Special and among these are some boars that will look good at the head of any herd. He also has some boars by Crimson Wonder Again. Write Mr. Weberg about these boars and kindly mention The Homestead when corresponding with him.

Porter's Duroc Jerseys.

A representative of this paper last week visited the farm of J. C. Porter, Ogden, Iowa, and found that gentleman with his usual number of growthy, thrifty Duroc Jersey hogs. He does not aim to raise more than seventy-five pigs, but he does plan to raise them right and nearly always succeeds in doing so. This season's crop is by R. J.'s Chief and King Gayno. R. J.'s Chief is a Harding bred hog by Belles Chief I Am, he by Ohio Chief and his dam was a daughter of Harding's King of Cols. The blood lines involved are good and they have shown a marked effect on the pigs on the farm. King Gaynor is by Col. Gaynor, dam by Claremont's Model and back of that are blood lines of the right sort. Mr. Porter has not aimed to produce a wide range of strain, but has confined his operations to those which have been productive of best results. He has Crimson Wonders and Model Chiefs as his main strains, with a few sows carrying the blood of High Col. and Choice Goods. He has on hand a number of fall gilts and three fall boars by R. J.'s Chief and out of Crimson Wonder dams. These are all thrifty, growthy and of good form. They will be sold at fair prices.

Windom's Poland China Sale.

The Poland China sale of Alvin Windom, Nodaway, Iowa, on August 22d, is full of good things both in the way of boars and sows and it will be made up of an unusually large number that are good as he has ever put through a sale ring. This is especially true of the grand good bunch of sows he is selling in this sale and it is also true of the fall boars that he is listing for this occasion. We are willing to stake our reputation that he is offering some of the best fall boars that will be driven through a sale ring this fall and the beauty of this is that they are nearly all sired by his great boar, Pawnee Nelson. We made special mention of several of the best of these boars last week and we will again say that there are several of these boars in the sale that will weigh 400 pounds, and they are good enough to head any of the best herds in the country and we do not care who owns them. This is saying a great deal for his bunch of boars, but Windom has the goods to show you and if you are on the market for a large-type Poland China boar, one that has the size and the quality to go with it, then you will necessarily be interested in this sale. Then he has a number of very choice spring boars, and some of these are sired by Pawnee Nelson and Progression, the latter being the large Expansion-bred boar that he has been using in the herd. Mr. Windom has selected thirteen head of the best sows in his herd for this sale and he has bred them to Pawnee Nelson for fall litters. Any sow that he is listing for this sale is good enough to go into any of the best herds and the fact that they are bred to Pawnee Nelson for fall farrow is in itself sufficient to show that they will be money-makers for any breeder who will buy one. He is listing some of the best fall and yearling sows he has ever owned sired by Pawnee Nelson and these are bred to his great young boar, Windom's A Wonder. The latter boar is going to be one of the largest sons of old A Wonder and Mr. Windom is growing him out with the expectation of making him one of the largest Poland China boars in southern Iowa. The Windom sale is one where we know there will be some great bargains. He is not a man that says very much, but he does breed hogs and he has some of the best that can be found anywhere. It will be one of the very best sales that we know of where we think breeders will get bargains and the man that wants a boar or a sow will unquestionably find as many choice bargains in his sale as any that they will attend this fall. Write for his catalog at once and be sure to attend the sale. If you cannot do that M. T. White will be there in the interest of The Homestead and will care for any bids you may send him.

Thompkins Wright, Holstein Breeder.

Thompkins Wright, Waupun, Wis., is one of the most successful breeders of Holsteins in the state of Wisconsin. He has developed some wonderful cows and the size, conformation and well-developed milk organs of his whole herd show a careful selection from good foundation stock. In the Wisconsin cow competition Mr. Wright won the first prize for December, 1909, with Leland Maid; February, 1910, with Leland Sunbeam; February, 1911, with Lady Oak Homestead Ormby. He was also awarded fourth place in the class for highest production of butter fat by ten cows in any one herd for one year. His herd bull, Johanna Bonheur 2d Segis, is a very large animal, showing great capacity. Mr. Wright's farm is located two miles south of the city, where he is glad to show his pets, as he calls them, to any one interested. From time to time he has for sale some young animals from this herd.

Tutt's Chester White Boars.

In a recent letter from G. H. Tutt, Marathon, Iowa, the well-known Chester White breeders, he says: "A few lines to you in regard to my stock. It is growing like weeds. I never have had a better lot to offer. My spring boars, many of them have size enough to weigh up to 200 pounds now, and for quality, say, that is outstanding on them. These boars are hard to fault and I am sure will please the most critical buyer. They are worthy of heading some good herd to which some of them have already gone. If any of The Homestead readers are in need of a good herd boar, something they can feel proud of and not afraid to show to their neighbors, with the best of breeding behind it, I will be glad to show them or give an accurate description of them to any of the boys." Write Mr. Tutt about these boars and send him an order and get in on the ground floor before the best are gone.

Otto R. Bellows' Duroc Herd.

One of the good herds of Durocs, especially among the newer ones is the herd owned by Otto R. Bellows, Fairmont, Neb. Mr. Bellows is a gentleman that has had the advantage of a splendid farm training as well as a liberal education in the better universities of the state, and has engaged in the Duroc business because he likes the business, feels that he will be doing the live stock industry a bit of good by his efforts, and also because he believes that he can make more money with the very best than with the ordinary sort. With this end in view he has purchased of the very best herds, such of the tops as they would sell, and the careful selection have demonstrated that they were the right sort. A son of Crimson Wonder Again is doing good service in the herd. A few litters are by the old boar, Model Prince, but they are a little late and do not show up quite as well as the other stock just at present. A litter by Model Chief 8th and out of Lady Russell by Crimson Wonder Again is very good and look as though they would make exceptionally valuable stuff. Also the litter out of the famous sow, Missouri Lady by Valley Chief and sired by Crimson Wonder Again look as though they would make good stuff to tie to. F. H. Allen, Tobias, Neb., has a fall litter of this very mating that are among the toppers of the season. They will be at the Nebraska State Fair. A few herd sows are by Wonder Boy by Lincoln Wonder. Miss Bob 2d and Lady Bob from the Kirkpatrick herd have done well in the herd. They are out of Miss Bob which was the dam of Miss Bob's Lady, a sow that in four years produced $4,000 worth of stock for J. S. Beem, formerly of Bethany, Neb. Mr. Bellows has a nice lot of boars that he will now sell. They are of such breeding that anyone can use them, and individually they are of a high order, although they have not been specially fitted. The writer has great faith in this stock, as we know their past record, and have every reason to believe that they will make good. Kindly notice the advertisement on this page and when you write mention The Homestead.

Sheridan's Chester Whites.

The other day we called on P. H. Sheridan, Vail, Iowa, and found he had 125 spring pigs, the most of which are sired by All Right, his splendid old herd boar that he has been using for several years. Others are sired by Silver Boy, a son of Lewis E., and some others by Honest Boy and Monarch. A great many of these are out of immune sows, his herd having gone through the cholera last year. Mr. Sheridan will be at Des Moines with some good boars and a good sow or two and he will be pleased to have the boys look him up at the show. If you are going to be in the market for a Chester White boar this fall see him when you go to the fair. He also has quite a bunch of fall boars on hand and he can fill your order for anything you may need in the boar line.

Chas. A. Slepicka's Chester Whites and Short-horns.

The writer recently called on the well-known stockman, Chas. A. Slepicka, Tobias, Neb., and we wish to report that we found some very fine stock on this farm. The Chester White herd came into prominence a couple of years ago when the great boar, Plainview Choice, was the champion boar of a number of the western hog shows. This boar is surely one of the real good ones of the breed at present. He is not only a show boar with a great reputation, but he is also a sire of the very highest order. Last year Mr. Slepicka lost nearly the entire spring crop with the bad weather and for that reason there was very little stuff offered last season that was the get of Plainview Choice. This year there will be only a limited number for the reason that Mr. Slepicka kept only a few sows. These are very choice, however, as good as we have seen to date, and as Mr. Slepicka is anxious to turn them soon, he will name prices that make them real bargains. The writer watched the development of this class of stuff, and we have paid particular attention to the get of sons of Plainview Choice and we must say that in every case they have made good. A fall boar by Plainview Choice and out of Nancy by Wonder is one of the good propositions of the season that we have seen. He is just a few days too old to show as a senior pig, otherwise he would undoubtedly make a strong competition in that class this season. This boar is for sale and we do not hesitate to recommend him. He is mightly big and smooth, and is a typical Plainview Choice boar. Wonder was the first-prize boar at the Iowa State Fair, 1911. There are also some spring boars of the same blood lines and they are really headers for the good herds of the country. These boars can be bought worth the money, and to hesitate is to lose a good thing. The Short-horn herd is headed by the good young bull, Diamond Digger by the champion Diamond Goods. This is a very fine bull of the Queen of Beauty family, and he is showing up some of the best calves we have seen this season. Last spring Mr. Slepicka made a sale of Short-horns, retaining about a dozen of his very best cows. These calves are from them, and they are, and should certain-

TOO LATE TO CLASSIFY.

KING GANO 13311

Weight 725 lbs. at 17 months

The most sensational yearling of the year and the greatest living son of Col. Gano. Be sure to see him at the Iowa State Fair and buy one of his sons.

O. E. OSBORN - WESTON, IOWA

Imported Herefords at Public Sale

Two-year-old bull, Farmer, an English champion, included in the sale.

Aurora, Ill., Friday, Aug. 29

50 Head---16 Bulls

THESE cattle were selected by one of the best judges in England, and come from the leading herds of that country. There are 20 bred cows, 2 to 5 years old; 16 bulls, including the sensational Farmer, 28 months old, considered by competent authorities the best Hereford bull ever imported to this country; 12 yearling bulls of size, substance and conformation and some extra good bull calves. This is the first lot of imported Hereford cattle that has been offered to the public in over a decade, and every Hereford breeder and admirer should give the sale hearty support. Write today for catalog, mentioning The Homestead, to

Cols. Carey M. Jones and Fred Reppert, Auctioneers.

Geo. Leigh or Wm. George, AURORA, ILLINOIS

ly be good ones. These young bulls will be offered at any time from now on. If interested in this good stuff, write Mr. Slepicka and mention The Homestead.

Fargo Farm.

E. J. Fargo, Lake Mills, Wis., has one of the largest and one of the best selected herds of Holstein-Friesian cattle in this vicinity. His herd now numbers nearly ninety-five head of pure-bred cattle and it is an interesting sight to see them in the pasture. Mr. Fargo is devoting more attention than ever to his herd of beauties and the way they respond to this care and attention is evidence enough that breed coupled with feed will produce the records which make it a pleasure to be in the pure-bred game. Although Fargo Farm is exceptionally well equipped with buildings, yet with the expected increase in the near future it will be greatly crowded for room. The barns are equipped with a vacuum cleaner for cleaning horses and cattle and for keeping the barn free from dust and cob webs. The farm is scarcely half a mile from the city and is completely furnished with electric lights and motors, making it an ideal place to care for cattle.

Waltmeyer's Durocs.

Waltmeyer Bros., Melbourne, Iowa, will as usual have a high-class lot of Duroc Jerseys at the Iowa State Fair. These gentlemen have been consistent winners at the leading state fairs for several years and after looking over their show herd we believe this year will be no exception. They have bred nearly all of their winners in the past and this year every animal they will show will be of their own breeding. It is the work of a master hand to so mate animals and feed and develop them good enough to win in competition with the best in the land and these brothers have been doing this repeatedly. Good judgment and a persistent effort to reach the top in their chosen vocation accounts for their phenominal success. We are not going to mention any particular animals they will show, but suffice to say that in every class they will have strong contestants for high honors and they will have strong candidates for championship ribbons. Duroc breeders in general will find much of interest in their exhibits and this firm will be glad to show their hogs to anyone interested. On September 20th they will sell about forty boars at public auction, largely of the same breeding as their winning show herds.

The Big Ridge Hog Farm.

At Dexter, Iowa, a young man has taken up the business of breeding pure-bred Poland China hogs in a business like manner. He has selected an excellent farm of small proportions which is particularly adapted to the business. He will devote his entire attention to the feeding and care of his hogs and permit other farmers to raise the feed. Frank Roberts, the young man in question, has started out with excellent judgment. He has now at the head of his herd two excellent hogs, Giant Jones and Pawnee Wonder. Giant Jones is a big fellow, strong of bone with symmetrical conformation and other qualities that are appreciated by those who know Poland Chinas. His sire was the Wigstone hog, Big Jones 3d, and his dam Hunt's Giantess, an animal that not only proved herself a rare producer, but also made an enviable record in the show ring. Pawnee Wonder was a son of Fesenmeyer's A Wonder, his dam Giant Adair tracing to Rude's Giantess. During the past season in order to establish his herd along popular lines Mr. Roberts bought a number of sows from representative herds each of which produced a litter. He has one litter by the champion Columbus, one by Big Black Jumbo, one by Gerstdale Wonder, two by A Wonder, two by Big Joe, one by Big Orange, three by King Wonder and one by Smooth Price. There are also a number by his herd boars first mentioned. Most of these pigs are of March and April farrow. The brood sows are of popular lines of breeding, being daughters of A Wonder, Big Joe and other good strains. Mr. Roberts made a sale last winter which averaged right at $50 per head and the popularity of the blood lines which have been added since that time lead to the expectation that he will have fully as good a sale when he makes his next offering. Mr. Roberts' fall sale will take place October 14th, but additional information will be given concerning it in later issues of this paper.

Hurless' Chester Whites.

Harry Hurless, Ogden, Iowa, breeds Chester White hogs. A representative of this paper looked over his herd last week. He found it in splendid condition and it contains an excellent lot of pigs of very uniform size and general excellent quality. They are mostly March and April pigs, the get of Onward 2d, White Wonder and Mahaska Boy. Onward 2d was by Wildwood Prince, he by Onward. His dam was a Vaughn hog. White Wonder was by Crescent, dam a Crystal Beauty by White Oak 2d. This is a bog with an extra good back, a splendid head and ears and good quality throughout. Mahaska Boy is by Grand Leader and his dam was Fancy Girl. He carries a line of prize-winning blood that has been prominent at most state fairs. The brood sows that produced the present crop of pigs are by Mahaska Boy, Grand Model, Wildwood Prince, Eclipse, Iowa Chief, Iowa Harvey and Chief Combination. It will be realized from this enumeration that the strains of blood involved in this herd have come from the best breeding herds in the land. There are eighty-four spring pigs. They are not fat, but are in the most thrifty and growthy form. They carry wonderfully good length, strong backs, good feet and legs and considerable style and quality. There is every evidence that these pigs will grow into animals that will be a credit to the breed. Mr. Hurless offers pigs for sale and guarantees satisfaction. Throughout his entire sale season of last year while he sold a great number of pigs he had but a single dissatisfied customer. This is an enviable record. For prices and descriptions write to Harry Hurless, Ogden, Iowa.

Sale of Imported Hereford Cattle.

The live stock world in general and the Hereford fraternity in particular should be widely interested in the offering of imported Hereford cattle to be made at Aurora, Ill., Friday, August 29th, by George Leigh and William George. As has already been stated in these columns these cattle were carefully selected by one of the best judges in England from the leading herds in that country and were bought on an order sent over by Mr. Leigh and Mr. George, whose instructions were to select the best cattle that could be found, with expense as a secondary matter. These gentlemen, from their years of experience in the cattle business, realized that the time was ripe for an infusion of fresh blood into the herds of this country and their enterprise in this matter should certainly be appreciated by the American buyers. Among the fifty head of cattle they will offer will be found some of the best things that have been offered to the buyers of this country in a great many years. Sixteen bulls are listed, headed by the twenty-eight-months-old Farmer, a champion at some of the best England shows and without doubt one of the greatest bulls that the breed has ever produced. There are fifteen young bulls, from calves up to long yearlings, with plenty of size, bone, substance and the right conformation, and among them are some outstanding propositions that merit the attention of the most discriminating buyers on sale day. Twenty breeding cows, from two to five years old, are in the offering, many of them with lusty calves at foot and all bred to high-class bulls in England. These cattle were recently inspected by the writer at the farm of George Leigh near Aurora, at which place the sale will be held, and while many of them are in rather thin condition, owing to the fact of their recent importation, yet we have no hesitancy in thoroughly endorsing the offering to the fullest extent. Mr. Leigh, who is one of the pioneer Hereford men of this country and who has imported more white faces than any other man in America, considers it easily one of the very best lots of cattle that he has ever had anything to do with, and his judgment in this matter will be confirmed by all those who see the cattle on sale day. This is the first importation of Hereford cattle that has been made to this country in over a decade and the thanks of the Hereford men generally are due to Mr. Leigh and Mr. George for their enterprise in the matter. The catalog should have wide distribution, copies of which can be secured by writing to George Leigh or William George, Aurora, Ill., as per the advertisement on this page. When you write kindly mention The Homestead.

Hampshires From Imported Stock.

There is no prettier sight than a nice flock of sheep quietly grazing in the meadow. This may be seen on the Twelve Oaks Farm of Ritchie Bros., Sun Prairie, Wis. For several years they have been breeding pure-bred Hampshires, using only imported rams and practically all imported ewes. They now have a fine flock of over 100 of these big, strong sheep. They won several firsts at the Dane County Fair with their flock. They are also breeding registered Percheron horses, which have likewise won several prizes at the local fair, including a silver cup. For further information write Ritchie Bros., Sun Prairie, Wis.

Will Crow's Poland Chinas.

If you want to see a good bunch of spring pigs go and see Will Crow, Webb, Iowa. He has 125 of them, big stretchy fellows, maybe no larger than some we have seen, but in the main much larger and smoother than the average crop that you will see from week to week. The remarkable evenness of the bunch is the best evidence that Will Crow is raising a practical, easy-feeding kind of the large-type Poland Chinas. We remember well a great many years ago when he had old Crow's Model at the head of the herd. He was not a beauty by any means, but he had plenty of size and he was a breeding boar. He certainly left a lot of good sows in the Crow herd and they were practically the foundation of his success. He has very few of these left, but the blood of old Crow's Model is still in evidence through his many granddaughters. Then followed Up To Date, a large boar of the easy-feeding type and his get were of the same kind. Today his chief herd boar is Crow's Kind, a son of that noted breeding boar, Big Orange, and he is out of Big Castle, a daughter of Big Wilkes, and she is one of the best sows in the Crow herd. This boar is an unusually large and a wonderfully thick hog and he will weigh as much as most of those that they are calling 1,000 and 1,100-pound boars. As to his breeding ability we will simply ask our readers to take a look at his get and you will agree with us that his get are large, big in bone and uniformly smooth. One of his best spring litters by this boar is out of Model 1910 and she is a daughter of Hadley's Expansion. There are four boars and three sows in this litter and they are large, smooth and not a poor one in the bunch. Another Crow's Kind litter is out of a Big Surprise dam and they are just like the first-named litter. A litter of four by Big Surprise, out of Miss St. Louis A, (a Mouw sow) will be very large and they are well grown out and will be right for any breeder to buy. The old sow is one of the best he has in the herd and she is rebred for fall litter to Crow's Kind. He has a splendid yearling boar in the herd called Brilliant and he is going to make one of the largest and best boars he has ever owned. He is a son of Model Monarch by Big Surprise and he is out of a dam by Hadley's Expansion. A perusal of his pedigree reveals some of the most noted sires of the breed and we regard this boar as one of the best that Will Crow has ever bred. He has a number of litters by him and they are showing up well. Another good boar that he is using is Straight Edge, a son of Prospect by Guy's Prospect and out of a daughter of Big Victor's Improver, he by Charlie Lonergan's Big Victor. This boar is an evenly turned fellow, with very few holes in him, and he is breeding well for him. He also has a few good litters by Big Porter, a boar that he sold some time ago and these are showing up quite well. He has three good fall boars that are sired by Crow's Kind that are worthy a place in any breeder's herd. One of these is out of Princess Lady, a litter sister to Crow's Princess, and the other two are out of a Crow's Model and Big Surprise dam. If you are on the market for a boar write Will Crow and let him send you a description of some of these best boars. When corresponding with him kindly mention The Homestead.

RED POLLED CATTLE.

Maple Grove Red Polls Offering choice bull calves and young cows and heifers. W. B. Danforth, Little Cedar, Ia

Eakle & Sons' Durocs.

S. E. Eakle & Sons, Prophetstown, Ill., have one of the best herds of Duroc Jerseys in the state. This Homestead representative has been familiar with the products of this herd for several years and knows that these gentlemen are working along right lines. At the present time their herd is in fine condition and they have the best lot of boars of fall and spring farrow that they have ever owned. They have a large, smooth, easy-feeding type with vigorous constitutions. At the head of their herd is the great boar, S. E.'s Premier Col., a son of Premier Col. He is a large, smooth, rugged boar and very active. They also owned Disturber for two years. This is the great boar that now heads Mr. Browning's show herd. Messrs. Eakle have two crops of pigs out of him and at present they have fall and spring boars that are right sired by this great boar. They own the dam of Disturber and she has a great litter sired by S. E.'s Premier Col. These half brothers to Disturber are corking good ones and will make show hogs. They have a great litter sired by Disturber and out of a Model Chief sow. This litter has extra size. There is another litter by S. E.'s Premier Col. and a Defender sow out of Proud Lucy that are good. They also own Proud Lucy, a litter sister to the dam of Disturber that has a good litter sired by Volunteer. A full sister to this litter topped the H. E. Browning sale at $315. There are some herd headers in this litter. There is a litter by Cherry Chief that would have made a good showing if properly fitted. These gentlemen have the best herd of brood sows in northern Illinois sired by Chief's Col., Defender, Model Chief, Chief Select, Premier Col., Proud Col., Golden Model, Top Col. and others. The pigs from these sows and S. E.'s Premier Col., Disturber and Captain Model have the breeding, size and quality combined. Any of our readers wanting a herd boar should visit this farm and see this great herd of hogs. You can find the breeding and individuals to suit. Prophetstown is thirty-five miles from Rock Island and twenty-five miles southeast of Clinton, Iowa. They will be glad to answer any inquiries regarding prices, breeding or description. This firm are honorable gentlemen with whom to do business and treat their customers fairly. See their advertisement on page 26 and when writing them mention The Homestead.

We guarantee safe delivery and record them at

25 DOLLARS EACH

They are sired by Big Expansion (the 800-lb. son of the noted Dorr's Expansion), Big Bone 2nd (weighing 900 actual pounds, a son of Big Bone), Chief Leader (weighing over 500 lbs. at 14 months old), and Ideal Chief, and other noted boars. **The dams are sows weighing from 500-lb. yearlings up to sows of over 800 lbs.** If you are in the market for the biggest blood lines, from big sires and dams, send your check, tell us the kind of pig you want and we will send him or return your money. You will not buy such boars, such breeding, at the price again this year. Buy your boar now and save 20 to 50 dollars on him.

W. H. COOPER - - - - - - - - - - **HEDRICK, IOWA.**

BIG BONE 2d 161497.

Faulkner's Famous Spotted Polands

"Are Leaders of Their Kind."

150 May and June pigs now ready to ship. The special price of $35 single, either sex; $65 pair, no akin; or $90 trio, no akin, will sell them all in the next thirty days. Start right with the kind of our forefathers. Mail your check with first letter. Everything registered.

HOMER L. FAULKNER - Owner Highview Breeding Farm - JAMESPORT, MO.

LAWSON'S SENSATIONAL BIG POLAND CHINA BARGAINS

THE home of the noted breeding boar, **Long King's Equal** (weight 965 lbs. in breeding condition, weighed in the presence of forty breeders). Sows bred to him and **A Wonder's Jumbo** for fall litters. **150 Choice Spring Pigs** that I am now offering at private treaty. Will not hold fall sale and will sell these out privately at less than half the money they would bring in a sale. Now is the time to get your bargain while the good ones are here. Write me at once for description and prices and mention Homestead.

JOHN B. LAWSON - - - - - **CLARINDA, IOWA**

C. F. Adams' Big-Type Poland Chinas

I AM making special prices on spring boars and gilts for the next thirty days. Good Judges Feed and Recommend SAL-VET For All Stock

L. H. COOCH, Editor of the Practical Farmer, Philadelphia, Pa. says—"After feeding "SAL-VET" to my horses and cows for a month, I am glad to give the preparation my hearty endorsement. 21 cows fed "SAL-VET" showed a condition that was really remarkable."

ROSCOE M. WOOD—Sec'y The Standard Delaine Merino Record, Saline, Michigan, says. "We have found a worm preventive in "SAL-VET" when proper conditions are maintained and it is kept constantly before the flock so they can eat all they want and have no other salt."

Hon. A. J. LOVEJOY, Roscoe, Ill., Pres. International Live Stock Exposition, Sec'y Berkshire Swine Breeders Ass'n, and State Senator of Illinois, writes: "SAL-VET" is the best thing we have ever used. We can heartily recommend it to all sheep and swine breeders."

President

Registered Pharmacist; Graduate National Institute of Pharmacy

Now I Ask You to Judge It For Yourself

I am willing to let you decide on your own farm, the real value of using SAL-VET on your own stock. I have PROVED to the satisfaction of thousands of prominent farmers and stockmen, breeders and prizewinners, agricultural colleges and experiment stations, that SAL-VET is DEATH TO WORMS—is a big profit producer—that it prevents losses by putting stock in condition to better resist disease—that it saves feed—saves worry and makes healthier, thriftier, more valuable animals. Notwithstanding the fact that I can refer you to hundreds of breeders who have used SAL-VET I STAND READY TO PROVE ALL THIS TO YOU ON YOUR STOCK BEFORE YOU PAY ME A PENNY.

SAL-VET

REG. U.S. PAT. OFF.

The Great Worm Destroyer and Conditioner

is a wonderful medicated salt, prepared especially to rid farm animals of their greatest enemies—the stomach and intestinal worms. These destructive pests cause 90% of live stock losses and no telling how much in wasted feed. They keep your animals in a weakened, unthrifty condition and consume the feed that ought to be making your profit. You may not always notice their presence, but all stock are infested and cannot thrive until you rid them of these pests. Let me rid your stock of these profit-eaters. Let me make your stock healthier, sleeker, more profitable. I'll prove my claims before you pay.

I'll Feed Your Stock 60 Days Before You Pay

Just tell me how many head of stock you have, or want to feed—Fill out the coupon below—Send it to me personally according to the address given, and I'll ship you enough SAL-VET to feed your stock 60 days. DO THIS NOW. Don't take chances. Insure good health in your herds and greater profits.

Stock Relish It—Doctor Themselves

There is no drenching—no dosing—no trouble—in feeding SAL-VET. Simply put it where stock can get to it. They'll make better gains with no more feed. You will be repaid many times over in bigger profits and protection against loss.

Don't Send Me One Cent—Just the Coupon

Mail the coupon properly filled in—tell me how many head of stock you have and I'll ship you enough SAL-VET to last them 60 days. You simply pay the freight charge when it arrives. Let your stock run to it freely. In 60 days report results. If SAL-VET does not do what I claim I'll cancel the charge, and you won't owe me a penny. I could not make you a fairer offer.

These Men Have Fed It

"Sal-Vet" was a great asset in feeding our undefeated home-bred animals at the fall shows, and we must have it to produce winners for the next season. The Champion Oxford Ram at the 1912 International has had constant access to "Sal-Vet."—Geo. McKerrow & Sons Co., Pewaukee, Wisc.

"Will say that "Sal-Vet" is the best stock remedy I ever used; beyond all doubt, it clears the worms from all stock, gives them soft, smooth, glossy hair, and tones up the system better than any stock powder I have ever tried."—J. M. Hodges, M. D., Physician and Surgeon, Cranberry, N. C.

"Since I have fed "Sal-Vet" I have not lost a single hog nor cow this spring. Everybody else around here has lost hogs and a great many cattle are dying in the neighborhood."—Lewis E. Choate, McAlester, Okla.

"After using "Sal-Vet", I find it possesses the essentials to a good stock remedy: 1st—its handiness to feed, 2nd—the fact that it is effective for all kinds of stock, 3rd—its low cost. Am very well pleased with the results."—A. H. Loucks, Aurelia, Iowa.

"I have seen such great improvement in the condition of my stock that I am fully satisfied that your "Sal-Vet" does even more than you claim. It cleared my horses of worms, after all other medicines had failed. You have a great stock remedy."—R. C. Pecht, Milroy, Pa.

"I was losing my lambs right along, until I began feeding "Sal-Vet"; since then, I have lost only one. After six weeks, I shipped them to the Pittsburgh market, where they sold for $9.30 per hundred, which was 5 cents over and above anything that sold in the market that day. This is what "Sal-Vet" has done for me."—Geo. Horn, Gambier, Ohio.

"Sal-Vet" surely is a great medicine. My lambs were dying at the rate of one or two every day. After I began feeding "Sal-Vet" I lost but one that was nearly dead by the time the remedy arrived. Since then I have not had any more losses and the lambs are all in tip-top condition. I would not think of keeping sheep without "Sal-Vet."—J. A. Biedert, R. No. 3, Findlay, Ill.

"My hogs certainly did fine while fattening, and I did not lose a single one, while some of my neighbors lost their entire herds. I must, and do give "Sal-Vet" credit for these results."—J. Wales Munroe, R. 6, Plainfield, Ill.

Look For This Label

on all SAL-VET Packages. Don't be deceived by imitations.

Don't buy "Sal" this or "Sal" that. Get the original genuine **SAL-VET.**

PRICES: 40 lbs., $2.25; 100 lbs., $5; 200 lbs., $9; 300 lbs., $13; 500 lbs., $21.12. No orders filled for less than 40 lbs. on this 60-day trial offer. Never sold in bulk; only in Trade-Marked SAL-VET packages. Shipments for 60 days' trial are based on 1 lb. of SAL-VET for each sheep or hog, and 4 lbs. for each horse or head of cattle, as near as we can come without breaking regular size packages.

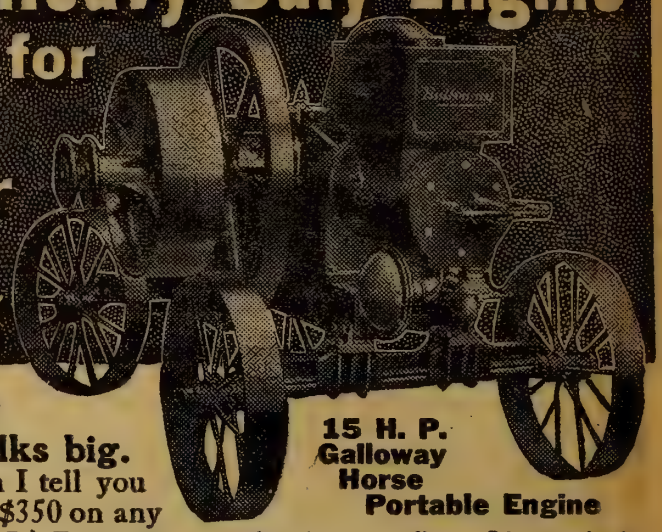
I'll Tell You How to Save $250-$350 On a Galloway Heavy Duty Engine

7½—10—15 H. P. for Running Any of Your Large Power Machines

Write Me Today!

Wm. Galloway, Pres.



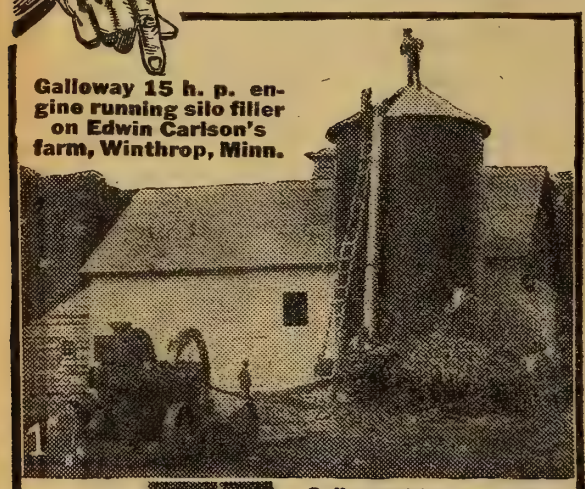
15 H. P. Galloway Horse Portable Engine

That's talking **big money but real money talks big.** I'll back up every statement when I tell you that you can actually save $250 to $350 on any Galloway Heavy Duty (7½ — 10 — 15 H. P.) Engine that you select from my line. It's an absolute fact and I can prove it to you in a flash when you get my offer.

Take my 15 H. P. Portable shown in the picture. **I sell it for half what you'd have to pay for a trust-made engine of the same power.** I said I'd prove your saving on any engine. All right, just drop me a line and I'll send you my big, illustrated engine catalog and Special 90 Day Price Offer. If anybody else wants to sell you an engine, **show him my prices and dare him to meet them.** I positively know that there isn't a single manufacturer in America who can meet my prices without losing money. My tremendous output and the direct selling plan that I have built up, make my low prices possible. When you buy a Galloway you pay just the bare cost of material and labor with only one small manufacturer's profit added. Compare that plan, backed by years of proved success, with the Trust way of adding four to six profits and you see how easy it is for me to save you $250 to $350 on your engine or your complete outfit. Now, I just want you to **investigate**, that's all. It's money in **your** pocket—**big** money. Write me a postal or a letter for my big engine catalog today. Remember, these engines are made in sizes from 1¾ H. P. to 15 H. P., either stationary or mounted, and are

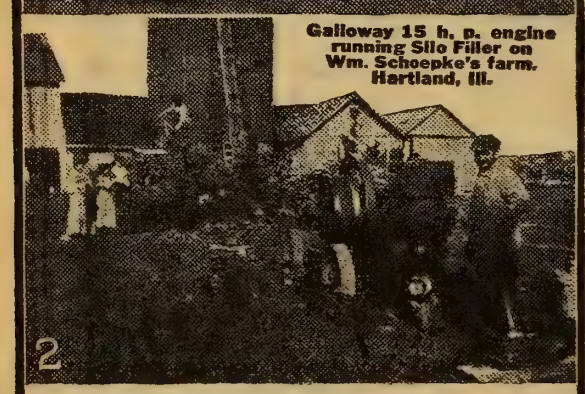
Sold Direct from My Factory to Your Farm

All Galloway Engines are made right in our own big chain of factories at Waterloo. There are no better made engines on the market. Galloway Engines are easy to start. Will run without attention as long as you want them to. Use less fuel per horsepower than any other engines on the market. They are proved engines. Over 30,000 in use today and all sold with the privilege of testing them 30 days on your own farm before you decide to keep them, backed by a five year warranty on materials and $25,000 legal bond. Every user of a Galloway Engine is a booster for them. That's why we sell more of them than any other concern in the world selling engines direct to the user. Isn't that proof enough that it pays to buy the Galloway and save from $250 to $350.



Galloway 15 h. p. engine running silo filler on Edwin Carlson's farm, Winthrop, Minn.

1



Galloway 15 h. p. engine running Silo Filler on Wm. Schoepke's farm, Hartland, Ill.

2

Get a Complete Galloway Silo Filling Outfit and Save Big Money

Remember, I can sell you complete Silo Filling Outfit, Shredder, Big Corn Sheller, Irrigation Pumping Outfit, Corn and Grain Elevator and Dump, and many other big combination outfits—all at money-saving prices. Just write me and tell me what you want and let me quote you the lowest prices ever made on these outfits. Write me without fail today for my complete Silo Filling Outfit. Hundreds in use and all giving complete satisfaction.

Free Service Department

My free Service Department, composed of the best engine experts, will give you all the information you want for the proper installation and use of your engine. They will tell you the best size engine to buy for handling your different machines, size pulleys, etc., and how to equip your engine for doing the best possible work This service costs you nothing, but is worth a great deal to you.

Here's the Real Proof

I just want you to look at these five illustrations here, showing 15 H. P. Galloway Engines at work in different sections of the country, running ensilage cutters and threshing machines. These are only a few of the many views of Galloway Engines at work running different machines, which we have on file. My big Engine Book shows a lot more. Sent FREE.

View No. 1 shows 15 H. P. Galloway Engine filling silo on Edwin Carlson's farm at Winthrop, Minn. Notice how smooth the engine is running in picture and without any attention. No. 2 shows a 15 H. P. Engine running a 20 inch cutter filling 16x32 silo on farm of Wm. Schoepke, Hartland, Ill. Mr. Schoepke said it took them only twelve hours, refilling and all, and that he filled four silos last fall. He paid for his engine the first year doing work for his neighbors at $10 to $15 a day. Good money to be made with a Galloway Heavy Duty Engine everywhere.

View No. 3 shows a complete Galloway Silo Filling Outfit on Mr. Galloway's own farm at Waterloo filling two twin hollow-block silos, each 50 feet high. How's that for silo filling? The pipe is 54 feet long. No. 4 shows Galloway 10 H.P. Engine running threshing machine on Walter J. Anderson's farm, Newman Grove, Neb. Mr. Anderson says, "I put it to hard work and it did fine. I had two other kinds but yours beat them." No. 5 shows a 15 H. P. Galloway Engine running threshing machine on W. H. Stuckmeier's farm near Waverly, Iowa.

Write for Catalog and Prices Today

Write me first. Get my 90 day special prices before you buy any other style or make of engine. It will be the best investment you ever made. I am selling more Heavy Duty Engines than ever before in the history of this big business because the men who have bought and used Galloway Engines are helping me sell them. Galloway Engines are their own best advertisement.

Remember, if you want a small pumping engine, or medium sized engine, I can supply you at a big saving. We make all sizes from 1¾ to 15 H.P. New Pumping Engine Catalog just out. Let me send you a FREE copy.

Get My Special 1913 Offer

Then as a clincher I am making the most liberal 1913 Co-Operative Profit Sharing Offer I have ever made, which is a tremendous, big inducement for you to buy the Galloway. It will actually help you get your engine partly or entirely without cost to you in the end.

Just mail me a postal or letter for my big illustrated engine catalog and I will give you all particulars of this special offer by return mail. Write me today. Do it before you lay this paper down. Address

DES MOINES, IOWA, THURSDAY, AUGUST 21, 1913.

Is Sweet Clover Growing a Fad?

How one of the Commonest of Roadside Weeds is Living Down Its Past History and Making a Record for Itself as an Economic Plant

WITH a "weed" record of almost 200 years on American soil it is not surprising that men have winced under some of the eulogies that have been passed in recent years on the so-called bee or sweet clover. A roadside plant of remarkable persistence on account of its ability to produce seed, it has been fought as an unwelcome invader. Its promotion from the weed to the economic class has been the result of the work of a few enthusiasts during the last decade and one-half and as yet the doubting Thomases greatly outnumber the true believers.

After wading through field after field of sweet clover along with 500 fellow farmers on the farms of Mr. Frank Coverdale, of Clinton county, Iowa, we are convinced that there is a place for this legume on the farms of the corn belt. Mr. Coverdale has been growing it fifteen years and during that time has worked out some of the knotty problems connected with sweet-clover production. He has found that a stand of sweet clover can usually be obtained by seeding it with an early-maturing spring cereal. This means that it is not necessary to give up the use of the land for a year, which is sometimes the case in alfalfa growing. In this connection attention should be called to the fact that sweet clover will stand more hardship on account of dry weather after the removal of the nurse crop than will red clover. Millions of dollars have been lost by farmers of the corn belt during the last three seasons as the result of a two or three weeks' period of dry weather after harvest. This has. in thousands of instances, completely destroyed the new clover. If sweet clover will stand that siege, and apparently it will, then the crop is one that cannot be belittled with impunity.

Sweet clover is a biennial. This means that it must be allowed to reseed the ground if it is used as a permanent crop. One of Mr. Coverdale's fields has been in clover for a period of fiteen years and there is a perfect stand in that field today.

How about sweet clover as a pasture and forage crop? That is a matter that has been thoroughly tested by Mr. Coverdale, who finds that it makes exceedingly valuable pasture for cattle and hogs, that it never produces bloat, that it makes a hay equivalent in value to red clover or alfalfa, and, furthermore, under anything like favorable conditions, it will outyield the other legumes. The United States Department of Agriculture says that hogs pastured upon sweet clover will make gains that compare very favorably with those obtained from alfalfa or red clover. The digestible nutrients in a ton of sweet clover are even greater than in a ton of red clover, though, of course, its feeding value depends upon the stage of cutting and how it is cured.

Like all legumes sweet clover thrives best where there is considerable lime in

CHAMPIONS OF THIS GREAT LEGUME UP TO THEIR WAISTS IN THEIR FAVORITE CROP. JUDGE QUARTON, ALGONA, IOWA, (TO LEFT) AND MR. FRANK COVERDALE, DELMAR, IOWA.

the soil. On a rather thin hilltop on the Coverdale farm an application of two and one-half tons of ground limestone more than doubled the crop the first year. It matters not how stiff and hard a soil may be, if it is sweet. For best results inoculation is absolutely necessary, though in most cases the seed carries with it its own inoculation. Some claim that it is better in the first instance to use unhulled seed, as the dust in the hull inoculates the soil.

Sweet clover, if seeded with a nurse crop in the spring, seldom produces a cutting the first year. If conditions are favorable the first crop will be ready for the mower in June of the following year. It should be cut for hay before any blossoms make their appearance and before the stems become woody. Two crops of hay may be taken from the land and the third allowed to produce seed. The price of seed, however, has been such during the last few years as to justify the practice of letting the second crop go to seed. If there is a good stand and the soil is reasonably productive a yield ranging from six to twelve bushels of seed per acre may be expected. The crop is not hard to handle, but may be cut with a binder and threshed with a clover huller.

Mr. Coverdale has learned from experience that sweet clover should never be cut close to the ground, but as he says: "Cut it just above the lower branches of the plant." When this is done the following crop makes rapid growth, whereas if it is cut down to the ground the clover is invariably killed there and then.

The "weed" characteristics of this plant are shown by its adaptability to fit into varying conditions. It is found in semi-arid regions where timothy and red clover are unknown and it produces satisfactory crops in some of the eastern states on both acid and alkali lands. According to the National Department of Agriculture, "It will grow on soils too sandy to support ordinary field crops, and appears to be even better adapted to raw clay and loose cuts and fills, where scarcely any other vegetation is able to establish a foothold. It also makes an excellent growth in gravel pits and stone quarries, but for some reason does not seem to do well on unsettled, cultivated soil. It makes its best growth where the soil is compact and not crowded with other vegetation."

In the clamor for sweet-clover seed some farmers have been duped. They have been furnished seed of the yellow variety, which, while properly classified as sweet clover, is a low-growing, early-maturing type that is in reality more of a weed than an economic plant. The kind of sweet clover that makes good produces a white blossom, grows tall, branches profusely and matures its seed uniformly. While it is in reality the common roadside clover, yet cultivation is improving it so that men like Mr. Coverdale are beginning to recognize "varieties" within the species. There is surely a great work

WHEN AND HOW TO APPLY LIME.

More and more men are recognizing the fact that production is often found to be at low ebb even when there is an abundant supply of plant food in the soil. This is especially true on types of soil showing a high percentage of acidity, a condition that can be very quickly remedied by an application of lime.

In a recent bulletin issued by the Wisconsin Experiment Station the question of applying lime to such a soil is discussed somewhat in detail. According to this bulletin any form of lime should always be applied previous to planting the crop which is to receive the benefit of liming. To be most effective, it should be applied to plowed land and thoroughly worked in by harrowing. Either fall, winter, or spring applications may be made on clay soils, but on light soils spring application is preferable so as to prevent leaching, which may occur on this type of soil.

There are several ways in which lime may be applied to the land, depending upon the facilities at hand and the condition of the lime.

Any form of lime which is damp enough to prevent blowing can be spread very well with a shovel directly from the wagon. A little skill in handling the shovel will enable the operator to spread it both quickly and evenly. Without any standard of measurement it is difficult, in spreading lime in this way, to determine just how thickly to spread it in order to apply the proper amount per acre. A square rod, which is a block of ground a little more than five paces each way, is a good unit of measure for surface, and a rounding shovelful a good unit for the lime. If, for example, the material is damp ground limestone to be applied at the rate of two tons per acre, every square rod should receive twenty-five pounds, which is equal to about two rounding shovelfuls. At this rate, a load of one ton will cover a strip two rods wide and forty rods long. Again, if the material is damp refuse lime (air and water-slacked lime) to be applied at the rate of two tons per acre, each square rod should receive twenty-five pounds, which is equal to about four and one-half rounding shovelfuls. It is very disagreeable and almost impossible to spread any dry, finely divided lime satisfactorily from the wagon.

Dry, air-slacked lime, kiln-dried marl, or dry, pulverized limestone can be most satisfactorily applied by the use of fertilizer distributor, or a lime spreader. Rock phosphate and lime distributors are attached to the rear of the wagon box. It takes one man to shovel the lime into the hopper from the box and another to drive. Lime spreaders built on the plan of an ordinary grain seeder may be had on the market. Some of these machines are attached to the rear of the wagon, and the lime is shoveled into the hopper from the wagon box, as in the case of the phosphate distributors. In some cases an ordinary seeder has given very satisfactory results when the lime is dry and free from coarse, hard lumps.

When there is much lime to be applied, a lime spreader would be a profitable investment. Two or more farmers can easily co-operate in buying a machine, securing the lime, and in getting the material spread on the land.

Sometimes a manure spreader may be used to spread lime. The spreader is set at its lowest gear, a few inches of fine manure spread over the bottom of the box to hold the lime in and the lime distributed evenly on top of this thin layer of manure. If three tons of refuse lime are to be applied per acre, and the machine is set at four loads per acre, as on lowest gear, then each load must contain at least 1,500 pounds of lime.

If quicklime is to be used, it can be hauled to the field and placed in little piles on the plowed land. Fifty pounds in each pile and the piles placed two rods apart each way, will give an application of one ton per acre. This lime may be slacked either by pouring a pailful of water on each pile or covering each with moist soil. As soon as the lime becomes slacked, the finely divided material should be carefully spread, the contents of each pile to be spread over four square rods. When this is done, the field is harrowed to work the lime well into the soil where it must be to do its work in correcting the acidity.

Under no consideration should quicklime ever be applied as a top dressing on young clover or alfalfa, for the caustic properties of this form of lime will kill the young plants.

The application of lime as a top dressing on young clover or alfalfa growing on sandy soils may prove very satisfactory if kiln-dried marl or finely ground limestone is used, though better results may be obtained by liming the plowed field before seeding. The openness of a sandy soil enables the fine lime particles to work their way down into the soil. Top dressings on heavy clay loam or silt loam have not, on the other hand, given very satisfactory results, for these soils will not permit the easy entrance of the lime particles as in case of sandy soils.

Sometimes, however, after harvest or in the fall, a farmer wishes to lime his spring's seeding of clover or alfalfa on clay loam, for example, in order to increase the yield of hay the next year, if possible. In such a case, partially air-slacked or water-slacked lime applied at the rate of a ton or a ton and a half per acre early the next spring before the frost is out, may prove very beneficial. Such an application should never be made after the young plants have started their new year's growth, because there may be sufficient caustic lime present in the material applied to kill them. A sandy soil may be treated in the same way.

DRAGGING A GRADED ROAD.

A Nebraska subscriber, Mr. F. J. Rist, gives his experience in dragging a road after it has been well graded. Among other things Mr. Rist says:

Much has been said in your paper concerning good roads. Most farmers are interested in good roads. They are a direct benefit to a farming community or any community. It has been my observation the past few years that when a farmer buys an automobile he begins to drag the roads. If autos will make good roads, "blessed be the auto."

In my estimation a good dirt road will be the road for the corn belt for some years to come. The split log or King drag is the machine that will build or keep up our roads if properly used. It is a comparatively easy matter to have good roads on paper, but constructing and keeping up a good road is a different thing. The road running by our place had never had any grading except at the culvert just in front of the house. It was low in the center and as the drain was toward the culvert from both directions, the water would drain down the middle of the road and make the road almost impassable at times. In April 1912, this road was graded in just one day with a four-horse grader, at a cost of $10 to the precinct, which allows $5 per year for keeping the road up. The grade is twenty feet wide and high enough in the center to drain well. I always make two rounds with an eight-foot split log drag when dragging. I have raised the center of the grade about six inches with the drag the past year. This road is nearly always smooth and solid, and is termed the "speedway" by autoists. No road should be graded unless it is to be kept up with a drag as it is a waste of money to grade the roads and not keep them up.

The main difference between the views of those who are "cranks" on dragging and those who believe in the sensible use of the drag relates largely to the emphasis that is placed upon grading previous to dragging. This paper has always claimed that in the case of soils that do not drain freely the first important thing is to put up a grade in order that water may freely flow to the sides of the highway. Some drag enthusiasts believe that the grade should be gradually made with a drag because in so doing they claim that an impenetrable crust is formed, one that is absolutely impervious to water. Theoretically this principle might apply, but practically it will be observed that the best roads are found in those communities where grading precedes dragging just as has been done by this subscriber.

A RURAL BANK SYSTEM.

During the past week the farmers' co-operative bank movement has been brought to a head by the introduction of a bill in congress by Senator Fletcher, of Florida, for the establishment of a chain of rural banks throughout the country, working in conjunction with a national rural bank, under direct governmental control and supervision. The matter is now squarely up to congress for the first time.

It will be recalled that the act making appropriations for the department of agriculture for the fiscal year ending June 30, 1914, contained a "rider" authorizing the president to appoint a commission of not more than seven members to travel throughout Europe and study "co-operative land mortgage banks, co-operative rural credit unions and similar organizations and institutions devoting their attention to the promotion of agriculture and the betterment of rural conditions." The president appointed Sen. Duncan U. Fletcher, Sen. Thomas P. Gore, Congressman Ralph W. Moss, Mr. Harvie Jordan, Mr. John Lee Coulter, Dr. Kenyon L. Butterfield and Mr. Clarence J. Owens.

This commission returned from Europe a fortnight ago and in a preliminary report, issued during the past week, favored the general plan of the co-operative rural banks of Europe, proposing to issue a much more extended report, together with a letter of recommendation to the governors of the various states, in the near future. In the meantime, the $25,000 which congress appropriated for the necessary clerical hire and office expenses in Washington is to be used to open up headquarters and distribute the commission's literature favorable to the rural co-operative banking plan.

Although Senator Fletcher did not accompany the federal commission to Europe, he is apparently satisfied with the finding of his confreres and is willing to stand sponsor for the bill to provide a similar banking system in this country. The bill which he introduced in the senate last week provides a system of local national rural banks, owned and operated by farmers; a state national rural bank in each state, owned and controlled by the local rural banks as stockholders; and the national rural bank of the United States, to be located in Washington, and to be owned entirely by the state rural banks. To supervise this proposed chain of rural banks there would be created in the treasury department a division of rural banking, under the direction of a rural banking board, to consist of the secretary of the treasury, the secretary of agriculture and the secretary of labor. The division would be under the immediate supervision of a director of rural banking, to be appointed by the president. The main purpose of the banks would be to furnish bonds to farmers on long-term bonds or notes, secured by liens on farms at not exceeding 60 per cent of their assessed value. Loans would be secured first by the local bank, then by a state bank, and last, by the national rural bank of the United States, and they would run from twenty to fifty years. The national rural bank is designed to have a capital and surplus exceeding $100,000,000, while the stock of each local bank would be limited to $2,000,000.

Speaking in the public prints in favor of his bill and the proposed chain of rural banks, Senator Fletcher said:

It is obvious that the only method of furnishing capital for requirements of the farmer is the creation of a long-term first mortgage bond, secured on his land, which bond shall contain a sinking fund provision, so that an amount shall be set aside each year to pay off the bond when it matures. The farmers' loans should run from twenty to fifty years. No bank can loan money for such a length of time. The money must be borrowed from the investing public. Here is where a special system of banks is needed which will be authorized to use their credit in guaranteeing such bonds under restrictions which will reduce the risk of such guarantees to a minimum.

This matter promises to come in for widespread discussion throughout the country generally within the next few years. It will not be universally favored. Financial, economic and agricultural conditions are so different in America from what they are in Europe that there will be those who will oppose any European co-operative system as altogether impractical for adoption in this country, even were it needed. At the same time, there will be those who will maintain, and with good reason, that the farmer should be given every facility for obtaining long-time loans at lower rates than the city man is enabled to obtain money.

Out of this pro and con discussion will come educational good, whether the European plan is found to be feasible for adoption in this country or not. Anything that will make it easier for the farmer to obtain "the sinews of war" is commendable, although it will not do, by any means, to belittle or question the agencies which have contributed so materially to his advancing welfare in the past. This whole subject is too big and too fraught with national success or failure to be settled off hand or without free and full discussion of every feature, both for and against.

CHARCOAL FOR SWINE.

Hogs that are kept under the more or less artificial conditions prevailing upon every farm seem to crave substances which contain little nutriment and which would not seem to be the result of a healthy appetite. But at any rate mineral matter is constantly demanded by hogs of all classes, and if it is not supplied we often see nice green pastures being spoiled by hogs rooting them up to find mineral matter. If this is furnished in the feeding lots it will do as much or more to keep the animals from rooting as hog rings. Mineral matter is required principally for the building up and strengthening of the bones. A considerable amount goes also to purify the blood, the condition of which for good or bad has a great deal to do with the power of the hog to withstand the disease-germs that would attack him. A plentiful supply of mineral matter will often prevent the brood sows from getting "down in the back." Sometimes this ailment is occasioned by kidney worms, but more often it is caused by a lack of mineral matter in the feed, thereby causing the sow to draw upon her own supply in the bones to supply the pigs, and this naturally causes the sow to lose strength and perhaps her back becomes very weak.

This craving or requirement of the hogs for mineral matter is sometimes satisfied by the feeding of coal slack. While it is true that this is not the best corrective of the kind which may be employed, yet if the animal's appetite for it at the start is satisfied there cannot be any danger in feeding all of this material that the hogs will consume. Experienced hog feeders generally prefer charcoal to coal slack, however, that made from corn cobs being considered the best. Cob charcoal is now recognized as a most valuable supplement in the feeding of hogs and the majority of hog feeders provide a regular supply of it for their animals. Charcoal not only furnishes a fair amount of mineral matter, but it is also a preventive of disease, as it has an absorbent property that makes it a cleansing and effective internal antiseptic. It absorbs the foul gases, poisons and germs of disease and keeps the intestines cool, open and healthy, thereby often preventing indigestion when a heavy grain ration is being fed. Charcoal is not a cure for disease, but so far as an absolute remedy for any disease is concerned the most positive "cure" is prevention, and charcoal is a preventive of the first order.

The farmer need not purchase a supply of charcoal, as he can easily make it at home with but little, if any, expense. It is unnecessary to construct a permanent kiln to convert corncobs into charcoal. Simply make a hole in the ground three feet in circumference at the top and three or four feet deep, tapering the sides sufficiently so there will be no danger of its caving in. Then start a slow fire of corncobs in the bottom of the pit, adding more cobs to the fire from time to time at such a rate that the fire will be gradu-

ally drawn to the top of the pit when completely filled, while the whole bottom of the pit will be a mass of partially burned cobs. The cobs will settle somewhat as they char so that a considerable amount of charcoal can be made at one time. After all the cobs have become well burned, cover the pit with a piece of sheet iron or boiler iron secured for the purpose and throw dirt on it about the edges to exclude air. Then leave the mass to smoulder until the fire is exhausted, which will be in a day or so, according to the size of the pit, when the cover may be removed and the charcoal be taken out. If desired a certain amount of wood may be added to the cobs as they are placed in the pit.

The charcoal should be fed to the hogs as often and in such quantities as their condition indicates the need of its use. A teaspoonful of finely powdered charcoal to each animal is about the right proportion where fed regularly with each feed. As good a method as any, however, of feeding the charcoal is to construct a shallow box which is to be kept full of charcoal and placed where it is accessible to the hogs at all times.

IOWA STATE FAIR OPENS.

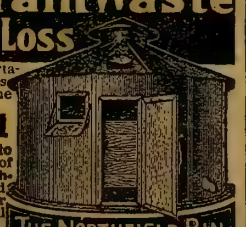
The fifty-ninth Iowa State Fair opened in Des Moines today, with splendid prospects. Although the anticipated excursion rates on the railroads were not forthcoming (the regular two-cent-a-mile fare being charged) there is every indication of a large attendance. With a billion-dollar rain saving the corn within the last week and experts figuring that the total corn yield for the state will range from 375,000,000 to 400,000,000 bushels, Iowa farmers confront a winter of prosperity and are well content to take a week off and visit the exposition which, in such striking manner, displays the extent and versatility of their welfare to the world.

In our issue for next week we will present the story of the opening days of the fair, while The Homestead of September 4th will contain the full story and the final awards, together with pictures of the prize-winning animals in all classes and departments. The Iowa State Fair has become such an institution of learning, as well as of enjoyment for the whole family, that a report of the fair in its entirety, such as the next two issues of The Homestead will contain, will be a veritable text-book on agricultural prosperity in the richest and greatest state of the union.

We repeat our invitation for all Homestead friends to make the down-town publishing plant (at West Third and Locust streets) and The Homestead booth on the main street of the fair grounds their resting and meeting place. Every visitor will be given a hearty welcome and provided with the accommodations necessary for the comfortable enjoyment of a visit to the capital city and to the fair.

Austria not only sells timber but timber products from its forest lands, and disposes of about 1,500,000 railway ties a year. There is no provision in the United States by which the national forests can dispose of manufactured lumber, though the policy of selling standing timber is well established.

Stop Grain Waste And Money Loss



Thousands of these portable, rust proof granaries now in use. Everyone giving satisfaction.

2 GRAIN BINS IN 1

Can be partitioned to store 2 or more kinds of grain at once. The Northfield combines all good features found in other makes and has several new improvements.

Saves More Than Its Cost Every Season

THE NORTHFIELD BIN AND COMBINATION CORN CRIB

Costs but a trifle more than wood and is permanent. Insures your valuable grain against fire, dampness, rats, thieves, etc. It will dry out and preserve your grain better than the best wooden bin. Is ventilated through floor and sides, under eaves and by cupola. Holds flax or any small grain and is easily converted into a vermin proof corn crib. Anchor bolts make it wind proof. Only bin with a perfectly smooth rain proof floor. Side and floor sections connected by patent interlocking cleats. Easiest and quickest to set up. Sections all interchangeable. Cannot get mixed. The heaviest bin of its size. Built to stand rough usage. Most reasonable in price compared to its weight.

Sold on 30 Days' Trial. Satisfaction Guaranteed

Write direct to factory for FREE samples of sheet metal, catalog, prices and easy payment terms.

Hints on Filling the Silo

Subscribers Who Have Had Years of Experience in Filling Silos Give Details Pertaining to this Important Task.

W. I. RAYMOND, Madison county, Iowa:—In filling the silo there is a right time to get the best results. So be ready. Have the cutter on hand early if a new one is to be purchased, or overhauled, sharpened and adjusted, if the old one is to be used. See that the binder is in good condition. In fact, be ready to cut and fill when the corn is exactly right. This stage is when the ears are mostly dented so that the advanced ones will shell when the knives strike them and the later ones will be in the milk or roasting stage. Better be on the side of overripe, however, and add water (of which I will speak later) than to cut too green.

Cutting too green means a loss of nutrients which you may save by cutting later. It means a development of too much acid. It means a washy feed, which is not desirable. If the ears are at the point of development I speak of above and the stalks and leaves are green with the exception of the lower leaves extending perhaps to the ear, you will have sap enough in the plant to make the silage, provided it is cut fine enough and tramped close enough to exclude all the air.

We find that with an average-size cutter (one which will put away about ten or twelve tons an hour) you will need as to crew, if the haul is near the silo, five or six teams with driver, low wagon and flat racks. Each man throws on his own load, throwing it as high as convenient, which will make load enough, for it is heavy material to handle. Have the bundles small as the binder will make them. Two men should feed the cutter, each feeding alternate loads. Have two or three men in the silo to level and tramp, being particular to keep the feed higher next to the wall and extra well tramped at that point so the silage will not tend to settle away from the wall and thus let the air go down from the top and spoil the silage the same as if it went in through the wall. An engineer and water hauler finish the crew with the exception of the man who runs the binder. This size crew and cutter with a twelve to fifteen horse-power engine, steam, will put away about 100 to 125 tons of ensilage in a day or fill a fourteen to sixteen by thirty-foot silo in a day if ten hours' time is put in.

The corn should be cut with a binder, which should start a good half day ahead of the cutter so as to have four or five acres cut ahead, then it the teams gain on the binder they are not apt to catch it until the silo is filled. The corn does not wilt in the half day enough to hurt.

Should the corn be overripe or frosted before filling you will need another man to haul water for the silage. The best way to apply it I have found is this: Fix a barrel elevated about two feet from the ground. Take eight or ten feet of inch or inch and a half hose and syphon the water from the barrel into the blow case of the cutter. You will find it will go up very readily and from the force of the blast will become incorporated into the silage and through it so that it looks and is very much like silage made from green corn. Run in a stream from the size of a lead pencil up to three quarters of an inch, according to how dry the corn is. We have made good silage from shock corn which was frosted, cut and shocked at once and ensiloed two weeks later.

If you shuck the last two or three loads you will lose by rotting on the top only the fodder, which would be a loss anyhow if left in the field. Go to the top for ten days after filling and tramp the surface well in order to hasten heating and decay on top. Thus the air will not penetrate and spoil the feed to a depth exceeding four to five inches. When opening the silo, if you have left the ears on, take the spoiled top off and spread it in your pasture with the manure spreader. The hogs will eat all the grain out leaving the refuse fodder as manure.

If you purchase a new cutter, buy one (other things equal) with the larger throat. Silo cutters are mostly all built outside of Iowa where the ears do not grow so large and we find some cutters do not let the bundle pass in readily when it comes to the ears. Thus you will see how the larger-throated machine will be the most desirable. Have the binder make small bundles as possible, as they feed easier for the reason explained above, and are still heavy enough to handle. Feed into the cutter butts first with the bundles lapped a little. With a steady stream of bundles going into the machine it feeds easier, is easier on the machine and puts the feed away faster. Do not cut the bands. The twine is not injurious to the feed, nor the stock, even should they eat it.

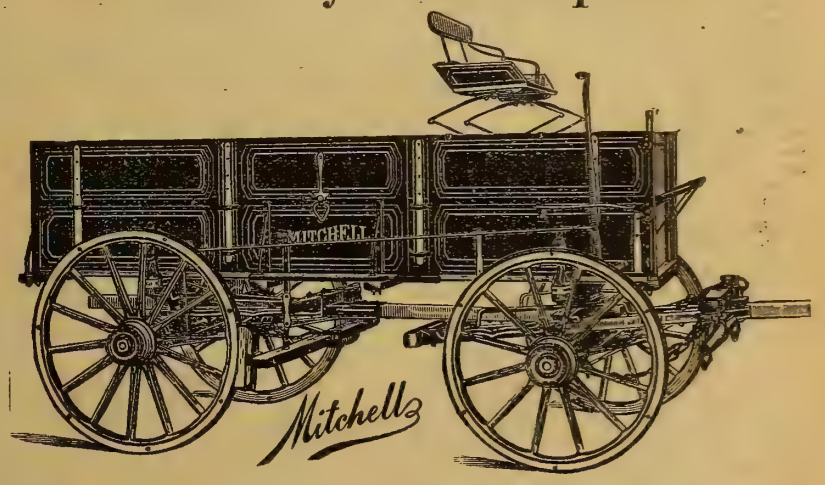
Following the plan outlined above for six years, owning the cutter, but hiring the engine and binder, I have found it costs me not to exceed an average of sixty-five cents a ton to fill our silo.

J. LEO AHART, Crawford, county, Iowa:—After having had some experience with a silo, and, consequently, with the filling of a silo, we find that the operation does not require extraordinary skill and that it should not be the cause of any worry on the part of the owner of a silo, or a prospective owner. Our silo is one of ordinary capacity—120 tons—and with everything running as it should, it takes about two days to fill it. A reliable cutter, plenty of help, and sufficient power are the main things necessary to do the job properly and with dispatch. It may be mentioned that filling a silo does not, for any reason, require any undue haste, at least not any more than threshing or other similar jobs. We find that it takes six teams where the cornfield is close to the silo and eight teams will do it where the corn is eighty rods or a little more away from the cutter. We use a thresher engine to run the cutter and have sufficient surplus power. When we think the corn is about right or when the kernels are partly glazed and the first two or three (lower) leaves are dry, we proceed as follows:

One-half day before starting to fill the silo, we start a corn binder in the field to be turned into ensilage. The bundle carrier is taken off and the binder adjusted to make small bundles, so they will be lighter and thus more easily handled. The binder is started a half day before so that it will be able to keep ahead of the wagons, as the cutter will take the corn faster than one binder can cut the corn. Common hay racks are used to haul in the corn. Low-wheeled wagons are much better than high-wheeled ones for this purpose. In either case, the sides are taken from the racks. Each man loads his own rack, letting his team follow the stubble row, laying the bundles all one way so they will unload easily and quickly. There is only one man at the cutter and he does the feeding. The cutter we use is very simple, having the cutting knives attached to the blower wheel and the cutting and elevating is done by the same mechanism. We use a flexible spout inside the silo to distribute the ensilage evenly. It is twelve feet in length and was made for us by the local tinsmith. It is in two-foot sections which are detached as the silo is filled. This is facilitated by snaps and rings on each section. The tube is controlled by a rope fastened to the lower section until it can be taken ahold of. We have two men in the silo to do the tramping. This is necessary to make good silage and to get the full benefit of the silo's capacity. The edge, especially, must be tramped well. When within six inches or so of the top we run enough wet straw through the cutter to finish filling the silo. For a sixteen-foot silo, a good big hayrack load will be enough for this. About so much of the top

(Continued on page 10.)

Are you prepared to haul your crops?



IF you need another wagon on your place, get one you can depend on 20 years or more after buying as much as on the day you buy it. The advantage in owning a

Mitchell Wagon

is that you don't take any chance on having just what you want; that's because the Mitchell is made by a company that has been building good wagons since 1834, and is using the same careful methods and well selected, air seasoned material as ever.

Better look into the Mitchell the first chance you have.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

These are the days when Old Sol and the crop killer both shine. The daily reports from such a large area of the corn belt must almost make the pessimist feel good.

Folks are again talking about "blessings in disguise." They say the present drouth is causing many farmers to secure a more permanent water supply, thus they secure a blessing they otherwise would not have. How about the man who has dug a dozen wells and found no water?

Hay is going to be hay this year, so cut up plenty of roughness to take its place. Plenty of corn fodder is a good thing to have any time and more especially when high-priced hay may be saved by its use.

Anticipate your wants in the way of corn binder repairs. Remember that the boxing that is worn may need replacing before the end of the harvest and certainly before the start of another harvest, so get the new boxing and have it ready the instant it is wanted. When possible, I like to make repairs on machinery before a breakdown comes.

The corn shock is best tied around the top as soon as it is made, not after it has time to settle crooked or the winds have blown down some of the outer bundles. I find the shock that is tied rather close to the top keeps best—the top hasn't a chance to fall apart then.

The children should be kept away from the silo filling machinery when it is in use. I have seen mere children playing around flapping belts and rapidly revolving wheels. The wonder is there are no more accidents than there are.

The market page is the popular part of the daily paper these days. A neighbor's mail box is near mine, and I notice when he comes for his mail he reads the markets before he leaves the box. As the saying is, "Every man is up on his toes."

The dry summer is proving hard on the vine crop. I am afraid my Yankee appetite for pumpkin pies must be satisfied for the year to come out of cans instead of from pumpkins raised around the old stack yard.

I believe in the deep well, the one so deep surface drouths do not affect it. Of course when deep water is unfit for use, then the deep well is not worth trying for, but where deep water is good it is the only water that can be depended upon in dry seasons.

Heat expands and cold contracts. Heat expands the air of the auto tire, and those who carry high pressure in hot weather, over hot roads, are quite likely to have blow-outs through casings that would otherwise hold. Remember to cut down about ten pounds on the air carried in tires this hot weather.

It is not so much a question of having to feed milk cows that are on pasture, but a question of its paying to do so. It most certainly pays when the grass is so short there is a shrink in the milk, and very often it pays to feed before the shrink is noticeably apparent, as it is easier to keep up a flow of milk than it is to bring it up after it has gone down.

When pastures are short and brown like they were a couple of weeks ago it becomes necessary to furnish the cows with green feed in order to keep the milk flow "flowing." For this purpose there is nothing better than a nearby field of growing corn. If this corn is cut and thrown over the fence into the pasture the fence must be a real fence or the cattle will soon be in the field helping themselves.

Trying to keep too many cows has discouraged more dairymen than any other cause. With our present knowledge of the corn plant the feed problem is practically solved, but the labor question is still with us. No man feels satisfied if he must work like a galley slave "from early morn till close of day." Don't forget that one cow well kept will yield a profit where two cows will be quite liable to be kept at a loss.

There is trouble ahead for the owner of a stave silo who forgets to loosen the hoops on the silo when it is filled. The swelling and shrinking of the lumber is about the only objection there is to a stave silo.

No matter what method is used in filling the silo there is always some waste at the top. The one who learns the best way of overcoming this will have something to tell that "book farmers" would like to hear or read.

The canning season is with us with all its sweetness. Let us enjoy it to the limit and see that enough fruit is put up in glass jars to make the memory linger all winter. The tin variety of preserved fruit may be good, but it is not quite good enough for the farmer.

See that the binder is well oiled and the knotter greased to prevent rusting before leaving it for its long and often ruinous "rest" until another harvest comes.

We have a very good weed law, but it is doubtful if it will kill many weeds. To the man who is a farmer from choice every weed is an outlaw and is treated accordingly, law or no law. To the other kind of farmer all weeds are flowers and the enforcement of the weed law means a lawsuit.

The race that excites the most interest at fair time is the annual stunt between Jack Frost and King Corn. Both are in training now and their race will be as interesting as ever.

DISTRIBUTING IMPROVED GRAINS.

The Iowa Agricultural Experiment Association has already done much to interest farmers in the plan of carrying on investigational work for themselves. During the present year nearly a thousand farmers are conducting experimental work on their own farms and it is the purpose of the association to greatly increase that number during the coming year.

Prof. John Buchanan, director of the experiments, now announces that he has two superior varieties of winter wheat ready for distribution. He proposes to send one and one-half bushels of one variety only to each experimenter, upon the receipt of $1.75 in payment for same. The only condition imposed by Professor Buchanan is that this amount of wheat must be sown on one acre and adjoining it a similar area must be seeded with the variety that is grown in the locality.

Fearing that the supply available will not be sufficient to meet the demand, Professor Buchanan has outlined another experiment which requires the use of but five pounds each of two varieties of winter wheat. These are to be sown on plots one-twentieth of an acre in size and side by side with them there must be seeded the regular home-grown variety. For this experiment no charge will be made for the seed.

We believe that every man who will painstakingly carry out either of these experiments will be well repaid for his trouble and may reasonably expect to obtain a variety of wheat that will excel in quality and in yielding ability the kind that is now being grown. For further information write Prof. John Buchanan, Agricultural College, Ames, Iowa.

Imperial

$1650
—buys extraordinary value in IMPERIAL "34"!

In purchasing your automobile you are out to get the best motor car value that your money will buy. You want the highest efficiency, the greatest power, the best comfort and the lowest possible upkeep in the car you purchase.

IMPERIAL "34" is, therefore, the car you want, because nowhere for the price — $1650 — can you buy equivalent motor car quality. For that reason hundreds of progressive farmers, who are the most critical buyers, have selected it.

We do not offer you a cheap car, cheaply built—one that is short-lived and lacks power and durability. Imperial "34" is a moderate-priced car but you will find that every cent you pay for it is built right *into it.* It will be giving service when lower priced cars have gone to the scrap pile

Your Money Buys—

A simple, accessible motor of 4¾ inch bore and 5¼ inch stroke—one that will take the steepest hills in your country and plough easily through the sandiest and roughest roads.

A Unit Power Plant—combining clutch transmission, motor and control levers. This keeps all working parts in perfect alignment, eliminates dangerous friction and keeps the oil in and the dirt out.

Control Levers—right over transmission. No complicated parts to get out of order.

Seat Springs, Cushions and Upholstery—the kind that you find only in the very high priced cars. You *sink right into* an Imperial seat with the same comfort you find in your big, fire-side chair.

118 inch Wheel Base—making it a long, graceful, attractive car.

A Big, Five Passenger Body—built to make it a comfortable family car.

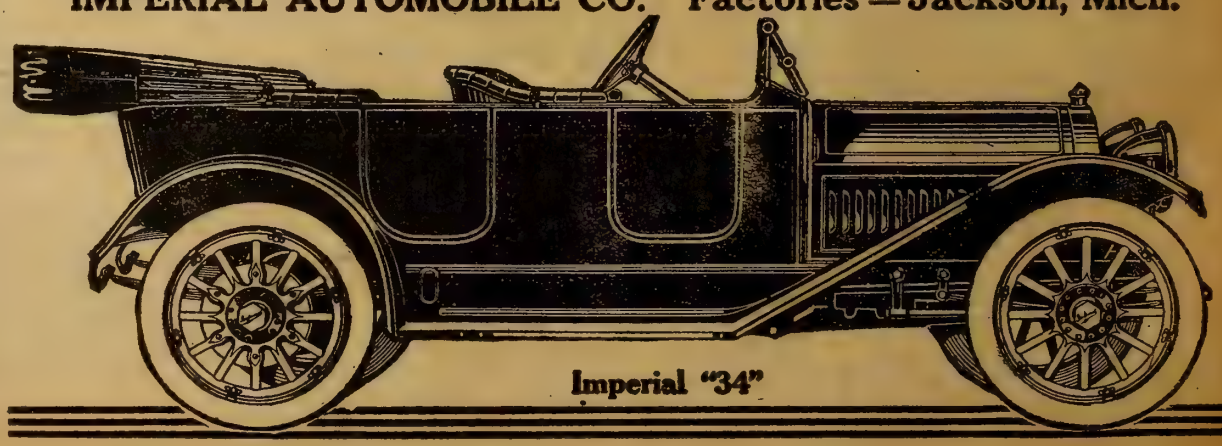
Electric Self Starting and Lighting System that is positive, simple and fool proof. It will *always* start your motor. You can depend on it.

See Them At the Fair

Visit the Imperial booth at the Iowa State Fair and see for yourself the merits of our cars. A courteous demonstrator will point out just why they are *"honest cars selling at honest prices."*

Don't select your car until you read our 1914 Catalog. Write for *your* copy today. It contains specifications for Imperial "34" and other cars that comprise our line. We will send the catalog immediately and see that you meet our dealer in your locality.

IMPERIAL AUTOMOBILE CO. Factories — Jackson, Mich.



Imperial "34"

CURRENT EVENTS

ANOTHER popular idol seems to have fallen. Gov. William Sulzer, of New York, has waged many a political campaign on the issue of friendship for "the common people." He has long been especially strong in the poorer quarters of New York City, where his homely brand of democracy has made a strong appeal. It has been his lifelong ambition to serve as governor of New York state. When he was elected a year ago the nation looked for an administration that would be remarkable for reform and political purity. The governor started out well. He demanded of the legislature an act giving the people of the state the right to name their candidates by primary ballot. When the legislature refused to enact a primary law Governor Sulzer called a special session and enlisted the aid of progressives and republicans in a non-partisan campaign for ballot reform. About this time, he was thrust into the limelight through a breach of promise suit brought by a young woman, who averred that the governor had not kept his word with her. Last week came the culmination of his personal troubles when the legislative investigating committee reported that the governor had falsified his sworn campaign expenses, that he had collected several thousand dollars more than he had admitted and that he had used public campaign contributions for speculating in stocks on Wall street for his own enrichment. So serious are the charges that the legislature voted his impeachment. His usefulness as a public servant would seem to be at an end, as a result of the public loss of confidence in his personal integrity. Had Governor Sulzer made good at Albany he might have been called to still higher things by his party.

MEXICAN affairs have been quieter during the past week, although the situation is still grave. Ex-Gov. John Lind, of Minnesota, the special representative of President Wilson, arrived in Mexico City in safety and was unofficially received by the minister of foreign affairs, notwithstanding the earlier announcement of President Huerta that his presence in the country was not desired. Several days were spent in consultation with American residents in the country, in an attempt to learn exact conditions and what policy would be best to pursue. In the meantime Ambassador Wilson, whose resignation has been accepted to take effect October 14th, continued his policy of embarrassing the Wilson administration and attempting to force recognition of Huerta by giving out public interviews criticising his chiefs and even endeavoring to make trouble with Great Britain and other big powers. It is quite apparent that President Wilson will never consent to the recognition of Huerta, unless the latter becomes the duly elected president. Whether the president will be successful in his hopes of peaceful mediation remains to be seen, but the United States has taken a firm stand on the issue of moral right and wrong in Mexico, a stand from which it cannot recede with either dignity or equity.

A NATION-WIDE movement to interest the American rural population along financial, business and social lines, as a means to strengthen the position of the farmers, increase their income and their production and to lower the cost of foodstuffs to the consumers is planned by the American commission on agricultural co-operation which recently returned from a summer spent in investigating farming conditions in Europe. Rural organization and co-operative banking systems, similar to the plans successfully tried in Europe, are depended upon for success in this country. In this respect the commission says: "The commission is deeply impressed with the vital importance of a thoroughly organized and united rural population. In this respect the countries of Europe offer a lesson which may not long be disregarded in America without serious consequences. The agricultural interests of most of the European countries visited by the commission are organized along one or more of the following lines: Credit, production, distribution and social organization for the betterment of country life. Organizations for the provision of credit facilities for European farmers follow the natural division into short-time personal credit and long-time land mortgage credit. The organizations for the provision of personal credit facilities are as highly developed as are the systems of commercial banking. The prevailing rate of interest paid by the farmers for short-time loans is from 4 to 5½ per cent. The terms offered European farmers are generally better designed to meet the peculiar requirements of agriculturists than are the terms obtainable today by the American farmers." A working plan will be outlined and submitted to governors of various states for whatever legislation may be necessary for the experiment.

IOWA SHORT-HORN BREEDERS' MEETING.

A meeting of the Iowa Short-horn Breeders' Association will be held on the Iowa State Fair grounds, Des Moines, Tuesday evening, August 26th. Several important business matters are to be presented at that time while in addition the officers of the association are prepared to receive suggestions from the members concerning the matter of making the association more useful to breeders. The exact place of meeting has not yet been fixed, but this information will be easily acquired on the day of the meeting.

No part of the fifty million dollar fund for moving the crops will be allotted to "wild cat" banks that indulge in speculation.

John Deere Spreader

The Spreader with the Beater on the Axle

The Low Down Spreader With The Big Drive Wheels

The main reason why the demand for John Deere Spreaders has been greater than those interested in the spreader business thought possible, is because the John Deere Spreader is built the way you would build a manure spreader, to suit your own requirements.

What You Want

Here's your chance to get exactly what you want in a manure spreader.

One that is easy to load, light for your horses, free from constant repairing, and one that will last as long as you think it ought to.

What You Get

With a John Deere Spreader you get a low down Spreader in which the advantage of big drive wheels is not sacrificed for the low down feature.

You get a spreader that is easy for your horses because it has these big drive wheels together with roller bearings, few parts, the fact that the center of the load is comparatively near the horses and the load evenly distributed over all four wheels.

There are no clutches to get out of order, no chains to give trouble, no adjustments necessary.

Built with a steel frame, securely braced like modern railway bridges, it is very strong and durable.

Why You Get These Things

Mounting the beater on the axle makes all these things possible in the John Deere Spreader.

It does away with some two hundred trouble-giving parts. It makes the spreader low down. It permits the use of big drive wheels. It does away with clutches, chains and adjustments. It puts all the strain and stress of spreader on the rear axle, where it belongs, not on the sides and frame of the spreader.

It does a lot of other good things, too. They are fully illustrated and described in our new spreader book.

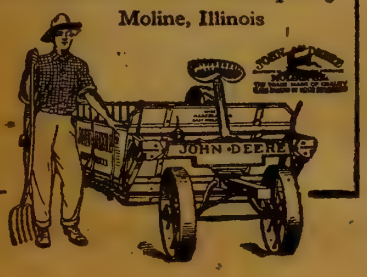
Get This Spreader Book

It tells how the John Deere Spreader is made and why it is made that way. It contains illustrations of the working parts and colored pictures of the John Deere Spreader in the field. It also has valuable information in regard to storing, handling and applying manure to the land.

Get one of these books free, by asking us for our spreader book, Y 27

John Deere Plow Company

Moline, Illinois



Symbols of Protection

Ancient Egyptians carved over their doorways and upon their temple walls the symbol of supernatural protection; a winged disk. It typified the light and power of the sun, brought down from on high by the wings of a bird.

Mediæval Europe, in a more practical manner, sought protection behind the solid masonry of castle walls.

In America we have approached the ideal of the Egyptians. Franklin drew electricity from the clouds and Bell harnessed it to the telephone.

Today the telephone is a means of protection more potent than the sun disk fetish and more practical than castle walls.

The Bell System has carried the telephone wires everywhere throughout the land, so that all the people are bound together for the safety and freedom of each.

This telephone protection, with electric speed, reaches the most isolated homes. Such ease of communication makes us a homogeneous people and thus fosters and protects our national ideals and political rights.

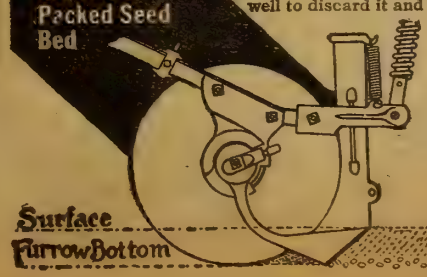
The Only Drill With a Perfect Furrow Opener

HERE'S the drill that will greatly increase your crops and profits, just as it has done for hundreds of other progressive farmers. It is equipped with our wonderful DISC SHOE FURROW OPENER, the only one that combines every advantage of the single disc for cutting trash and penetrating hard ground, with every advantage of the shoe for forming the furrow and depositing the grain. It's the only furrow opener that packs the seed bed after the disc has opened the furrow. The shoe carries the seed to the bottom of the packed furrow. Every seed counts. Every seed is sown at a proper, even depth. So every stalk comes up and ripens evenly and the grain grades up best. The shoe prevents any dirt from falling into the furrow until after the seed is deposited.

The New Peoria Drill

Is the only one equipped with this Disc Shoe Furrow Opener. So the New Peoria is the drill that is sure to increase your crops and save your seed. It is the drill that insures every seed the three essential requirements for successfully growing small grain—Heat, Air and Moisture. Even if you have a new drill of some other make, it will pay you well to discard it and buy a New Peoria.

Every Seed Laid in a Packed Seed Bed

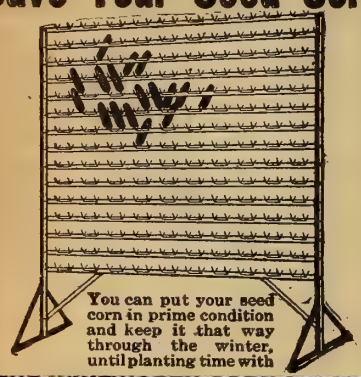


Do not think that the wonderful Disc Shoe Furrow Opener is the only advantage of the New Peoria Drill. Every other part is just as superior. Let us prove it. You take no chances on the New Peoria. Every drill sold on an absolute guarantee. Let us send you a booklet and all the facts and figures, also opinions of men who know. Send your name and address on a postal now. It's worth money for you to know all the details.

Peoria Drill & Seeder Co.

2435 North Perry St., Peoria, Illinois

Save Your Seed Corn



You can put your seed corn in prime condition and keep it that way through the winter, until planting time with

THE WHITWORTH CORN DRYER

Dries every kernel thoroughly; no moulding. Will hold 600 ears, each one separately and rigidly in its place. You see them all at a glance. Rack is 6 feet high, 5 feet wide. Frame of heavy steel bars; pins heavy galvanized steel wire.

Price only $6.75—We have a special Combination Offer that will interest you. Write us about it.

Champion Mfg. Co., P. O. Box 4358, Cedar Rapids, Ia.

Ground Limestone Will Increase the Fertility of Your Soil

RECOMMENDED by Agricultural Experiment Stations. Destroys acidity and largely increases crop production. Cheaper and easier to apply than burnt lime, and can be stored without danger or loss. If you will send us your name and address we will send you sample and quote you prices.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

LAW QUESTIONS CONSIDERED.

SCHOOL ROAD—BREACH OF CONTRACT.

An Iowa Subscriber.—Two years ago a new road was opened on a section line through my land by the school board. The agreement between us was that I was to give free right of way, providing the school board would drain a slough through which the road would pass. This agreement was written on a sheet of paper and pinned to the petition when it was signed. The road was graded through the slough, and has been traveled for two years, but nothing has been done towards draining the slough. The school board refuses to do anything and the county board of supervisors will have nothing to do with it. (1) Can I close the road if the slough is not drained? (2) What can I lawfully do about the matter?

Answer.—(1) You cannot close the road. (2) You can bring suit against the school corporation and recover as damages the amount required to drain the slough.

BOND TO KEEP THE PEACE.

A Subscriber, ——, Ohio.—A man who lives in a small Iowa town, and is divorced from his wife, goes about the place telling people that he intends to kill her, and she hears of it and is fearful of danger from him. What can be done about it?

Answer.—The wife can make complaint to a justice of the peace, and have her husband arrested and made to give bond to keep the peace generally, and towards her particularly.

OPENING ROAD—REMOVAL OF FENCE.

Mr. Joseph Howle, North Crandon, Wis.—The town is about to build a public road across my land on the quarter-section line. The land is fenced. When can the authorities move the fence?

Answer.—The authorities cannot require the fence to be moved between the first day of April and the first day of November. At any other time the town board can give you written notice to move the fence within a reasonable time not less than thirty days from the time of giving notice, and if you do not comply with such notice the town board may cause the fence to be removed at your expense.

DRAIN ACROSS RIGHT OF WAY.

Mr. D. B. Cummins, Ute, Iowa.—In order to tile drain my land I will have to extend the tile drain across the right of way of the C., M. & St. P. R. R. company. The company claims that I must sign a contract with it before I can extend my drain across its right of way. Is there any statute law or court decision in Iowa which requires me to sign a contract with a railroad company in order to cross its right of way with a tile drain?

Answer.—Under the law of the Twentieth General Assembly, section 1955 Iowa code, a land owner was authorized to notify the railroad company to construct a drain across its right of way and on its failure to do so the owner could do it at the company's expense, but this law was declared unconstitutional by the Supreme Court in the case of Fleming vs. Hull, et al., 73 Iowa Report, page 598. Under a law passed in 1909, now in force, in order to drain across a railroad right of way, you must file an application therefor with the township clerk setting forth a description of the right of way to be crossed, and of the proposed drain, and thereupon the clerk will fix the time for hearing the same before the township board of trustees and notify the railroad company. The trustees will determine the right to cross and fix the compensation to be paid by you to the railroad company, and also cost of construction, and you must deposit amounts thereof with the clerk. The railroad company may then construct the crossing, and if it fails to do so you can do so, and have the construction cost returned to you. No contract is required by law.

PROPERTY OF HUSBAND AND WIFE.

A Subscriber, Maxwell, Iowa.—A and B are husband and wife and have no children. They own real estate in Iowa, the title to which is in the name of the husband. (1) If the wife should die first how would this property be divided? (2) They also own personal property which is in the names of both. How would this property be divided if the wife should die first?

Answer.—(1) The real estate would not be divided at all. The title being in the name of the husband he would continue to own it after the death of his wife. (2) The husband would retain one-half of the personal property, in his own right and be entitled to one half of the other half, as heir to his wife. In short, three fourths of the personal property would go to the surviving husband, and the remaining fourth would go to the heirs of the wife, her parents, if living, or if her parents are dead, her brothers and sisters.

Under a new law passed by the Wisconsin legislature the owners or occupants of any land can hunt and kill rabbits on their property at any time and may also hunt and kill squirrels on their land during the open season without having to procure a license.

Let the Horses Do the Work

IN all the operations necessary to the raising of corn, from the preparation of the seed bed in the spring to the planting and cultivating, you use power-drawn machines. Why stop a reasonable method and go back fifty years or more at harvest time? Why take the horses off the work just when the hardest job is to be done? This year buy a corn binder and let the horses do all of the work incident to the corn crop.

There is not alone the saving in work to be considered; there are other important savings resulting from the purchase and use of an I H C corn binder. Properly used it saves the one-third of your corn crop which the old method wasted. Each corn binder saves the wages of four or five extra men or saves about four-fifths of the time spent in harvesting the corn by hand. No matter how you look at it, you will make money by investing in an

I H C Corn Binder

Corn is hard to cut, but the practical design and strong construction of I H C corn binders make them last and do good work for years in all kinds of corn, either short or tall, standing, down or tangled. When cut at the right time and cured in the shock the whole corn crop, ears, stalks and leaves are ready to be turned to profit by being run through an

I H C Husker and Shredder

Deering, McCormick or Plano

In years when the hay crop is short and prices high, a plentiful supply of nutritious stover enables you to bale your hay and sell it in the best market without detriment to your stock. Shredded fodder is eagerly eaten by the stock and is especially good winter feed, because of the large amount of heat-producing materials it contains. It is better to use corn stover in the barn than to waste it in the field; especially, since it comes to you as clear profit and at practically no expense.

I H C local dealers will assist you in deciding on the right machines for you to buy and they will give you cheerful and willing service, both before you buy and afterward, as long as your machine lasts. Get catalogues and full particulars from them or, write the

REPAIRING THE FARM AUTO.

To the Editor of The Homestead:

I have been closely reading the articles written by Mr. Henry Hatch and others, "Blacksmiths and Automobiles," and must say Mr. Hatch surely has the correct opinion of the matter. While the blacksmith is the farmer's closest friend, works hard, earns his money and the farmer could not get along without him, I like to see him prosper, as I was at one time a blacksmith myself.

Since I graduated from a course of automobile engineering I can reflect on the past and see where I made serious mistakes tinkering on motorcars and gasoline engines before having the required knowledge.

In past years I have been called to straighten out dozens of jobs when blacksmiths have tried and failed, often leaving things in several dollars worse shape than when he started.

In the first place not one out of fifty blacksmiths have made a study of the automobile, so he is not capable of the work. Again, he does not have the proper tools and machinery to work with.

Every blacksmith who intends to do automobile work should go to school and learn it, and not begin working on cars at other people's expense. I have seen several magnets entirely demagnetized through rough handling and several expensive platinum interrupter points burnt off through improper setting or smoothing. Many of these small parts require a setting to one-hundredth of an inch, and a glass polish. How many blacksmiths have the ability and tools to successfully handle a job of this kind? Yet there are several willing to try at the owner's expense. There are dozens of carburetors thrown out of adjustment, expensive transmission and differential gears ruined and dozens of other things I could recall come back to the manufacturer continually as the result of inexperienced workmanship of some country blacksmith or other untrained workman.

In regard to making springs will say that after years of automobile experience I find that valve springs, etc., should not be made by anyone but special manufacturers who practice making them, as they work too rapidly and under too great a strain to be made by anyone who does not thoroughly understand their construction and the breaking of a spring may result in other serious mishap such as carburetor explosion, etc., so they should always be ordered from the factory. Again he speaks of various kinds of steel. I have never yet seen the blacksmith who could correctly analyze the various kinds of carbon, nickel, chronium, vanadium, uranium and tungsten steel used in automobile crankshafts, magnetos, transmissions, different drive gears and almost countless other places throughout the automobile.

When your watch gets out of order you would not think of taking it to the blacksmith for repairs and the automobile has many settings made to the same standard of accuracy of a watch.

I could name hundreds of other reasons why a blacksmith without training should not be allowed to tinker with an expensive automobile, but I think I have explained enough, and after years of automobile engineering experience, my advice to the reading public is: Place your automobile repairing with the best machinist obtainable. W. H. Ruther.

ECONOMY IN FEEDING HOGS.

To the Editor of The Homestead:

As a general thing, on the average farm too much time is used in feeding and caring for hogs. Unnecessarily slow and tedious methods are employed, whereas shorter cuts in feeding than those practiced at present would produce equally good results either by the use of horse labor, by the rearrangement of the feeding yards and troughs, by the more careful use of pasture and crops that may be harvested by the hogs, and thus reduce the number of hours required to care for the animals and at the same time save labor.

Where one is feeding many hogs it frequently is a labor saver to use a horse in transporting swill, water and feed directly from tank and bin to the pens, yards or field in which the animals are kept. This is much easier on the feeder and is more quickly done. Wide-alley hog houses permit of the one-horse truck, not alone for hauling feed in, but for hauling out the manure and thereby keeping the surroundings clean and sanitary.

There are few who have taken the trouble to separate the shoats according to size so that they could be fed more easily and satisfactorily. Many prefer to feed hogs of all sizes together, either continuing the feeding until all are full or else wasting time chasing the larger ones away until the smaller ones are fed. Feeding all the animals will hold is a wasteful method, while beating up the big ones while the smaller eat is not conducive to gains in either the old or young. In both cases too much time is consumed and without good results. It is always well in feeding hogs to sort according to size and limit the number to twenty or thirty in a feeding place. A sufficient number of feed troughs should be provided so that all the hogs in each feeding place can eat at once. The troughs should be located under swinging panels so that the hogs can all be shut out until the slop has been placed in the trough. This saves slop and labor and the pigs do better. Much more time is gained in feeding when not annoyed by the hogs while slopping than when feeding in the ordinary manner. Subscriber.

Wood Shingles Won't DO!

In this **20th Century AGE OF STEEL**, wood shingles are fast disappearing. They cost too much; they rot out too quickly; too much trouble to put on; too apt to catch fire. That's why 100,000 men have come to put these beautiful **Edwards STEEL** Shingles on their buildings.

Edwards Steel Shingles **never** burn nor rot. Come in big clusters of 100 or more, which makes them ten times as easy to put on as **wood** shingles. Each Edwards **STEEL** Shingle is dipped in **molten zinc AFTER** it is cut. No raw or exposed edges. No chance for rust ever to get a foothold. And the patented Edwards Interlocking Device, which allows for expansion and contraction, gives **PERMANENTLY water-tight** joints.

Edwards STEEL Shingles

Get Prices As to prices, these **STEEL** Shingles are far below wood. For we sell direct from factory to user and pay the freight ourselves. Just get our latest Steel Shingle Books and Prepaid Factory Prices. Then compare. Then see if you can afford common wood shingles when you can buy genuine Edwards **STEEL** Shingles at these prices. Give dimensions of your roof if possible, so we can quote price on entire job. Send postal today and our Catalog 890 and Prices will reach you by return mail.

The PERFECT CORN HARVESTER

SOLD DIRECTLY TO FARMERS

$18.00--Freight Prepaid

The correctly adjusted machine to **cut for shock or silo.**

Works in all kinds of corn and on all kinds of soil.

No breaking off of ears or pulling of stalks. Absolutely safe.

Cut from five to ten acres a day with one man and one horse.

Kerrick, Ill., Nov. 18, 1912.

I take great pleasure in recommending the Perfect Corn Harvester to anyone who has corn to cut. I used two machines purchased from you in corn that would make 60 bushels per acre. Two machines, two men and two mules cut 40 acres of corn averaging 60 bushels per acre and cut 96 shocks per day, 16 hills square, and fed three car load of steers every day, besides doing other chores, and were all through with their day's work by six o'clock every night. I would be glad to have you refer anyone to me for any further information. Very truly, L. H. Kerrick.

Send today for booklet on "Cutting Shock or Silo Corn."

LOVE MANUFACTURING COMPANY,
Dept. 15, Lincoln, Ill.

Get Championship Yields
Next Year With
"Corn King" Seed Corn
Dryer and Storage Racks

Boost your corn yield by drying your seed corn *perfectly*. Corn King Storage Racks can help you do it. Seed Corn for the first prize corn in Illinois last year was dried in "Corn King" Racks. These racks let you "pigeon hole" each ear by itself. Thousands of cars can be stored in one room without any two cars touching.

This is the *easiest* and *most economical* way ever known for drying and storing seed corn. Hang the racks in sections—one rack below the other.

Here's a mighty handy outfit to have when testing seed corn—every ear in the whole rack is easily within reach.

Last year Iowa men increased their corn crop 11 bushels per acre. This is due, almost entirely to care in drying seed corn. You can do as well and maybe better—get a few Corn King racks and see. Only a few bushels increase will more than pay for your racks.

Each rack holds 100 ears—enough seed corn for seven acres. Racks are easily shipped anywhere. Freight prepaid.

Write for prices and "Boosting the Yield Per Acre." Address

A Silo Book Free

This is Vol. 37 of the celebrated Cypress Pocket Library, and its 120 pages discuss the silo proposition in *all its phases.* Probably it is the most authoritative and exhaustive treatise on the silo subject ever published. It is not in any sense a manufacturer's catalog, but it contains WORKING PLANS and SPECIFICATIONS for building the best and cheapest "EVEN TEMPERATURE" silo ever invented. This silo is not patented *in any feature* —the plans are for YOUR FREE USE and profit.

A Silo Book That Is Authoritative:

Some of the subjects treated in this book are:

"Billion Dollar Waste"
Silos New; Theory Old
You Need a Silo
Dairy Farm Profits
Silage Makes Milk and Beef
Beware of Frozen Silage
Silo Superstitions
May Be Addition to Barn
Cost of Filling Silo
Investment Value of Silo
Must Be of Wood
Not Necessarily Round
Lumber Bill for Silo
May Be Built Inside Barn
Science Condemns Cement
Cement Too Expensive

and a dozen other topics, each given a free, full and fair discussion—handsomely illustrated. Full plans, detail drawings and specifications for building a silo that WILL NOT CRACK, EXPLODE, TUMBLE DOWN, or FREEZE—nor will it chill the silage at siloing time. This economic masterpiece is the CYPRESS "EVEN TEMPERATURE" SILO.

All the Books Are FREE
(FOUR FARM BOOKS)

Vol. 4 is the BARN Book, with plans for 4 barns; Vol. 20 is the FARM NEEDS Book, with plans for 8 farm outbuildings; Vol. 36 is the CARPENTRY BOOK, with 12 plans and sketches of difficult jobs in carpentry, and Vol. 37 is the NEW SILO BOOK.

CYPRESS LASTS PRACTICALLY FOREVER

Saves ½ the Cost Of Fall Plowing

You can put this small, light Hart-Parr Oil Tractor and "Self-Lift" plow up against the stiffest kind of fall plowing and easily save one-third to one-half the cost of horse plowing on every acre, and do it with less drudgery. You can plow deep—6 to 8 inches—finish 10 to 15 acres daily and do a better, quicker job. Work the outfit 24 hours every day, if necessary. Specially designed carburetor on tractor guaranteed to handle cheapest KEROSENE on heavy, light or no loads. No plowman needed. One man runs the entire outfit right from the engine platform.

The 27 B. H. P.

HART-PARR -OIL TRACTOR-

is built light, yet amply strong, with no dead weight to drag around or waste power. Every detail is simple in construction. Tractor has only 300 parts—that is 500 to 1200 less than all others. Drive wheels are solid steel castings—not built up, and afford 31% greater surface contact, due to wonderful wave form lugs. For extremely soft soil, drivers can be equipt with "Hold Fast" extension lugs, the lugs that hold to the soil with a bull dog grip, yet do not injuriously pack or tear it up.

The Hart-Parr "Self-Lift" Plow

is one-third lighter and has one-third less parts than any other. Automatic lift is operated by a slight pull on a rope attached to the clutch lever. Separate hand-lift attachment for raising or lowering any individual bottom without disturbing adjustment of rest of plow. Special spring beam coupler permits bottoms to skid around or pass over stones, etc. Furrow wheel keeps plow straight in furrow. There are several features about this Tractor and plow that you ought to know about before you invest in a power equipment. We build a power outfit for any farm, large or small.

Write today for illustrated catalog, special circulars, etc., and let us counsel with you on your power requirements.

95

With tractor in motion, engine operator is clearing a single bottom of trash. Adjustment of rest of plow remains undisturbed.

Hart-Parr Co.

Charles City, Ia.

Build Your Crib High!

And, at the same time, put in an old reliable Schroeder Upright Driveway Elevator. Save time, save trouble, save expense, and get more for your grain by holding out for highest prices. With a Schroeder Elevator built right into your crib one man handles all the work easily in any position.

It's wider than any elevator made and will carry more grain. It's built right, down to the very bolts. And you can use it anywhere in very short order.

Get an Old Reliable **SCHROEDER** Upright Driveway Elevator

It is the first grain elevator ever made and has never been approached by imitators. It leads the field in every way—in make, in capacity, in sales. For engine or horsepower.

Up-to-date crib plans with detailed drawings, specified bill of lumber with estimated cost, mailed to you free. ASK US FOR THEM NOW

FREE BOOK on request. Tells all you want to know about Grain Dumps and Elevators. Get a copy today.

H. V. SCHROEDER MFG. CO. 150 Third Ave., Minier, Ill.

Crop Maker Roller Bearing—Fanning Mill

The easiest-running fanning mill a man ever turned—therefore the one f :omplete service and biggest results.

Every farmer knows the value of a good fanning mill. If you don't own one now, you are probably thinking of buying. But before you do buy, let us send you a Free Book telling about our great offer, which enables you to prove to your own satisfaction the wonderful capacity of this Crop Maker for *perfect work.*

30 Day Trial—Direct Factory Price

We mean just what we say—*free* use of the Crop Maker on your own farm for a full month, without obligation to buy, with the machine *yours at factory price* when you find that all we claim for it is true.

The Crop Maker runs "like oil" because it has roller bearings. It cleans, separates and grades grains and seeds of all kinds—turns out perfect seed for planting—insures bigger crops and larger profits. You will make many times its cost in a single season. This machine goes *to you from us*—one small profit added to the actual expense of making. Be sure to write at once for the Free Book, detailed description, price and complete offer. Please write *today.*

ST. PAUL FANNING MILL CO., Station 6, ST. PAUL, MINN.

What Shall I Name Him?

This is a picture of a beautiful pony which I am going to give some lucky boy or girl, but first I want a name for him. Send me the name you would like for this pony to have and I will tell you how

You Can Win the Pony

Just like Blanche Barringer and Hazel Lippe won "Dandy" and "Duke" for their own. They answered an ad like this one and did as I told them and now they each have a beautiful prize Shetland.

1500 Free Votes to All Who Send Name

Just as soon as you send me a name for this pony, I will tell you all about my great offer and actually give you 1500 free votes to help you win him. Remember, I will tell you about my free offer and give you 1500 free votes as soon as I hear from you. Write me today.

Copyright, 1913, by A. M. Piper

A. M. Piper, 726 Popular Building, Des Moines, Iowa

HINTS ON FILLING THE SILO.

(Continued from page 5.)

will rot anyway and one might as well have straw there to rot instead of corn. When the ensilage has been well tramped, it will settle about five or seven feet in a thirty-two-foot silo.

Although we have never, as yet, filled the silo with corn that was too dry, as it is when the filling is delayed or when frost has caught the corn to be used, our neighbor, we observed, ran a one-inch stream of water into the blower from a hose attached to a nearby hydrant, while the cutter was in operation. In case the above method could not be carried out, we do not see why one could not syphon the water out of a tank with a hose directly into the blower. We do not think it probable that too much water can be put on the ensilage. However, there is more moisture in the stalk than one would naturally think, even when apparently dry. Ordinarily, if the corn be cut before frost there will be enough water in it without putting more on. When filling we take the corn right from the binder or as nearly so as possible.

From our experience we find that it requires from ten to twelve men, besides the engineer, to fill a silo, keeping the ensilage cutter busy. As we have already said, it depends on the distance between the field and the silo. The engine we use is hired and the engineer comes with it. Ten dollars per day is a fair price to pay for an engine and engineer, the farmer furnishing the coal.

GEO. B. HEWITT, Harrison county, Iowa:—In taking up the question of filling the silo we will assume that the corn is adjacent to the farm buildings to avoid unnecessary hauling. Go to the field, pocketknife in hand, and, after choosing an average plant in the degree of ripening, cut out a portion of the stalk about the ear, put a little of the pith in your mouth and chew it. If it has a sugary taste, in fact quite sweet, your corn is ready to cut. In my opinion the taste is better to go by than the sight, especially in a season like this one where the growth of the corn has been checked by dry weather in some parts of the country. The husks and blades are not the best test to judge from as to the degree of ripeness, as different varieties of corn will show a difference in ripening, and sometimes when the husks and blades are dry the stalk is in a very green and insipid condition.

Set the binder to make the bundles as small as you can. Do not use the bundle carrier, but drop them directly as bound, because when dumped in windrows they have to be pulled out from under each other. Start the binder about four hours ahead of the cutter and by the time your silo is filled you will catch up with the binder, assuming you have the large-size cutter, which is the size I use. Five men are needed, each with a team and low wagon and hay rack, the driver loading his own load. Let the team follow the stub row, starting and stopping as in husking corn. Pick up bundle by the band, placing the other hand on the butt of bundle and turn it over on wagon, loading all tops and butts the same way. If the rack is fourteen feet long about thirty inches high will make about 3,000 pounds, depending upon the ripeness of the corn.

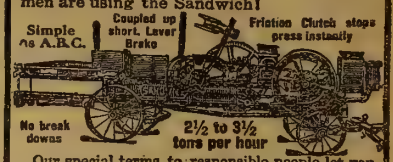
Drive to the cutter with the tops next to the carrier. Have a helper there to throw the corn off, a man at each end of the wagon. Pick the bundle up by the band and slide it toward the carrier to the point where it will overbalance with the tops in the carrier and the butts resting on the load. Each man on the wagon should keep his turn, laying the bundles down just as the preceding one starts off the feeder. By placing one hand on the tops and bearing down a little the carrier will do the rest. You can lap the bundles half way and will be surprised what a stream of corn will keep going into the cutter all the time and how quickly it will get away with a load of corn.

It is better to have the corn well over on the ripe side than to cut too green. It is always advisable to wet the corn, as there is no danger of getting too much water if it is inclined to be a little too dry or ripe. Water may be added by the use of an ordinary barrel with a half-inch hole bored near

(Continued on page 17.)

SANDWICH
(solid steel—money maker)
Motor Press

Puts you—or your boys—in the big paying, fast growing business of baling hay! "Net profit $18 to $22 per day," write Swartz & Mensch, Dixon, Ill. Other hustlers making $200 to $300 net profits monthly. And these men are using the Sandwich!



Our special terms to responsible people let you start with little money. And you pay from your profits. Unless we **know** the Sandwich will make you stacks of ready cash, we could not sell this way.

Gas Engine on Same Truck

Here's the most complete hay baling outfit in existence. Full power is driven from engine to press by heavy steel roller chain. It does away with slipping belts. The Gas Engine is the best quality—hopper cooled type—gear driven magneto—4, 6, 8, and 10-horse power.

The Sandwich has a simple time-tried self feeder and a big feed opening. A great windrow baler. Beats every ordinary press from 2 to 8 tons daily. 25 tons are an everyday job for the Sandwich; often 30 to 40.

This Book FREE

Write today for postpaid copy of this amazing story of profits others are making. And if you are interested in **Horse Power Presses,** let us tell you about our large line. Address

BOX 17 MORTON, ILLINOIS

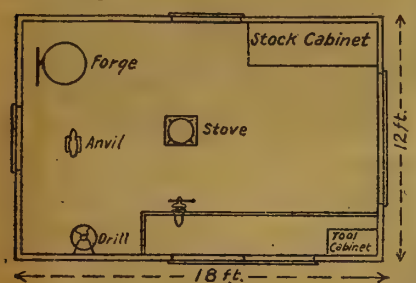
FARMER'S WORKSHOP.

To the Editor of The Homestead:

By no means would the shop of the farmer be called a model, for the tradesman would require a much more complete equipment. Yet to the farmer, his small equipment is of as much importance to him as the more elaborate one of the worker in wood or iron. I have had a shop of some description ever since I have lived on the farm and have come to regard it as a necessity from at least two points of view. It saves not a great deal in cost of repairs, though much more in time. Then it encourages the boys in the making of both necessary articles and work for their own amusement. And when a boy can get his amusement from useful work, I say let him.

If one is starting out with no tools, whatever, it is much better to get only a few at first and let them be good ones. For the worker in wood the first thing that will be suggested is the hammer, saw and steel square, but almost of as much importance is the draw shave, planes, a set of chisels and brace with set of bits. When you buy bits let them be of the solid center pattern, these will not spring so easily, and a stick of wood may be bored lengthwise with them. Don't get one larger than one inch. For the larger size let it be augers with an adjustable handle that will fit all. The ratchet brace is a great improvement. All of these tools will cost but a few dollars.

If a forge and anvil are to be added the cost will be greater, but the range of work that can be done will also be



greatly extended. A forge may be bought for $5 that will answer the farmer for light work, and a steel-faced anvil will cost about the same price. A solid steel anvil of good weight will cost $12 to $15. There will be but few more tools to add to this equipment. Tongs will be a good thing to learn on, and after a few failures the amateur workman will find that he can make a pair of tongs instead of buying. A good blacksmith hammer is one of the most important accessories; then will come a cold chisel and a few punches, a drill head with set of bits for drilling in iron and steel. One of the most useful tools I have ever found on a farm or shop is a set of taps and dies for cutting threads anew or in opening battered threads on old bolts. The cost is reasonable. I might go on enumerating tools that would be suggested, but these mentioned are the essential ones. The mail order catalogs furnish a desirable list at reasonable prices, but I do not think it advisable to buy a complete assortment as given in some of the collections advertised. There are so many tools that you will rarely need, that it would be much better to put that money in better tools though fewer in number.

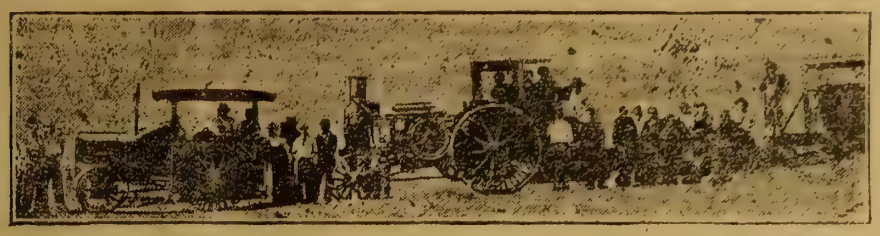
If shoeing is to be done, a small nail hammer, knife, rasp and buffer will be required. A dollar invested in an assortment of bolts and screws will be worth many times the cost, since it is often worth that much to be able to lay your hand on a single bolt of the required size.

Some of the more easily learned jobs in blacksmithing will be the sharpening of straight cutting edges as mattocks, picks, harrow teeth, etc. Then later on cultivator shovels may be handled. It will require considerable experience to do a good job in sharpening a turning plow. Learn how to temper the steel, and do not neglect this or leave a piece in the fire too long. For this reason it is best to practice on something of little value.

H. F. Grinsted.

I. G. Remmer, a Baron county (Wis.) farmer, boasts a yield of twelve tons of alsike and timothy hay from a three and a half acre field.

"I Will Teach You How to Run a Traction Engine Free" —Emory J. Sweeney, Pres. Sweeney Auto School



The purpose of this amazing offer, the good faith and reliability of which will be attested by the editor of this paper, is to demonstrate the superior equipment and facilities of this school, and also to celebrate the opening of the fall season in our magnificent new quarters, the finest and largest of the kind in the world.

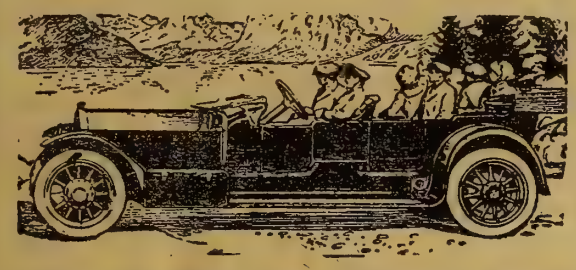
I want every young man mechanically inclined to investigate the BIG OPPORTUNITY for making more money that I can give him in a few short weeks, and knowing the demand for traction engineers I want to give all those who answer this announcement a FREE COURSE IN TRACTION ENGINEERING.

The Sweeney System of Practical Auto Instruction

is now universally recognized as the most thorough, practical and interesting course of automobile instruction, leading to certain and profitable EMPLOYMENT. It embraces every point worth knowing, including vulcanizing, brazing, oxyacetylene welding, lathe work, machine shop practice, testing, driving, truck repairing and operating, etc. AND YOU LEARN by doing the work on REAL CARS under the watchful eyes of skilled instructors. The only school equipped with all types of self-starters.

$50 Course Free to Men Who Answer this Advertisement

You know right in your neighborhood of the demand for traction engineers and mechanics. Factories want workmen and demonstrators. We are in close touch with a great traction factory here in Kansas City. We teach you on three different types of tractors in actual work and also give you FACTORY experience no other school can offer. Men are wanted right now for good jobs. Here is a wonderful opportunity for young men. You can learn in a few weeks. We want to start out a few graduates right away and so although the regular price of the course is $50 you GET THE COURSE FREE. Sign and return the scholarship coupon today. No previous experience is required.



Learn to Run and Repair Autos and Make Big Money

Here is your chance. I want you to come to my school and see for yourself how quickly and easily you can learn the business and become a HIGHLY PAID MAN. Six weeks after the day you enroll you will be prepared to properly repair any auto made, drive any car or truck or traction engine, or open a garage or repair shop of your own. You can learn the business thoroughly in my school because I have been years working out this system and the WONDERFUL PROMPT success of my hundreds of PROSPEROUS GRADUATES proves it.

Here's a trade where you are in demand 12 months in the year. Short hours, pleasant work. Outdoor life. Travel. Enjoy the world. Meet nice people. 90 per cent of the cars in use are not in proper adjustment on account of shortage of experienced mechanics. Grasp quickly this chance to make yourself a SKILLED MAN who is in demand and gets big pay for his work. No matter who you are we can teach you.

Eight Trucks in Daily Use Teach Students

We own a truck transportation company operating eight trucks and therefore give our students practical work in handling, repairing and driving trucks as well as giving them an insight into the livery and transportation business. NO OTHER SCHOOL in the world offers this valuable service to students, and from this alone you can get experience to open up a most profitable business of your own.

Our Men Learn Quickly and Easily, Because Practical Experience Is the Best Teacher

Study this picture. This is the only way to learn. Do things with your own hands. Practice beats theory. We do not merely tell you how; we show you how, and you then do the work yourself. We have over 40 cars of all makes on our floor, eight trucks, three tractors and our DRIVING TEACHERS keep out on the road nearly twelve hours a day. YOU GET PLENTY of WORK of all sorts.

No Books Used; Tools Furnished Free

The tuition is low and after you have paid that there are NO MORE expenses or extras you have to buy. If you could learn from a book there are lots published you could read at home, but PRACTICAL WORK is the only method and this is what makes my School different from all others.

Send Today for my big free catalog and we will also send you our monthly magazine free, the most interesting magazine for young men who want to get on in the world ever published. The catalog is full of fascinating PHOTOGRAPHS almost as good as a personal visit to the school. Send today, this very minute.

DAIRY

KEEPING UP THE MILK FLOW IN SUMMER.

To the Editor of The Homestead:

Summer feeding of dairy cows has its perplexities and problems as well as does winter feeding. Every summer there comes a decrease in the milk flow from the herd unless some special effort is made to meet and to overcome the conditions which induce the dropping off. The milk yield can be kept up through the season. Hundreds and thousands of dairymen are doing it. Every year a larger number are making an effort to overcome the conditions that induce the once regular dropping off in the milk flow and correspondingly the size of checks. They realize that the loss is more than temporary. It means more than a lessened income for two or three months. Many cows will not come back to the normal flow during the lactation period. Thus after having done well for perhaps two or three months she drops to a low and possibly unprofitable producer for the balance of the year.

What are the conditions that induce this summer decrease in milk flow and how are we to overcome them fully and economically? Almost anyone would answer quickly, "Dry weather and consequent short grass." We must all concede the wisdom of that answer. We must still go further. We must concede that the heat of summer is another big factor beside short grass. As a third factor we must give due allowance for the pesky fly. Our problem then is—to feed the cows well and to keep them comfortable.

Pastures will become short. The acreage that will feed a herd luxuriously in spring or fall is likely to be meager and scant if not dry and parched in midsummer. There is no way of getting around the proposition that additional feed must be supplied if the cows are to be kept in condition and the flow to be kept up. But how? Many things are possible. Fortunate is the man who has a summer silo filled with preserved succulence. In five or ten minutes he can feed his herd their daily portion and then go about his regular farm work. The summer silo has merits worthy of the consideration of every dairyman. The writer meets many men who are keenly studying this proposition. Recently he helped one progressive young man to plan a concrete silo with a concrete trough leading out from it in which the cows are to be fed in summer. In the future, more than at present, summer silos will be very common.

Soiling, or the use of crops fed green and fresh, has many advantages. Of course the summer silo cannot be made available if provision were not made last year, but soiling is in many cases possible although no special crops have been planted. Professor Kildee in charge of the dairy farm of the Iowa Agricultural College at Ames has done some very excellent work in determining the value of soiling crops. He has written:

Realizing that the production of dairy products in the state is lessened by the hot dry weather, flies, and short pasture, work is being carried on to see how this condition may be remedied. The summer silo, under many farm conditions, is the solution of the feed question, yet soiling crops have many points in their favor. During the past three years we have been supplementing our pasture with soiling crops and have secured gratifying results. We allow the cows to run in the pasture during the night and forenoon and then put them in the barn out of the sun early in the afternoon. They are given a liberal allowance of green feed when put into the barn and are sprayed to remove the flies. Thus handled the cows keep up the milk flow persistently and are much more profitable during the summer months. The milking herd of from thirty-eight to forty cows has had but nineteen and one-half acres of pasture in addition to eight to ten acres of soiling crops.

From our western state of Utah comes the report that six acres planted to a succession of soiling crops was so handled as to more than maintain thirty cows for three months. One hundred and forty-nine tons of green forage were produced on the six acres, an average of nearly 25 tons per acre. Of that 74 tons only were fed to the cows green. The balance when cured made 30 tons of hay. The cows had been fed 14 tons of alfalfa hay during the three months and also a small allowance of grain, though not enough grain to balance 16 tons of dry hay left after subtracting 14 tons to balance the 14 tons of alfalfa fed.

From the work in Utah with which the writer is familiar very intimately, we may draw a comparison between the silo and soiling. The yield of soiling crops was 25 tons per acre. Near by on land very similar corn was raised last year for the silo. The yield was 15 tons per acre. Always the soiling crops will outyield those grown for silage, but perhaps not to that extent. The comparison swings back with favor toward the summer silo when we consider the extra labor involved. In the Utah test a second plowing and planting was necessary. To cut the green feed and haul it to the cows meant the use of time very valuable for other farm operations at that particular season.

To get back to the problem of this particular season. The crops cut green and fed fresh to the cows will help to keep up the milk flow. Green fresh alfalfa has been fed many, many times with most excellent results and with only a small amount of danger from bloat as is the case when it is pastured. An early crop of field corn or sweet corn will be ready at the critical time. So will sorghum, or oats or oats and peas. Sometimes after some early crop has been removed millet may be sown for late soiling.

How about grain on pasture? Will it pay? Recently a young Greek who has made a remarkable success of dairying said: "The money that I spend for grain when my cows are on grass brings me the biggest returns of all the money I spend on the herd." His opinion is that the cows yield a little more milk at the time, but still greater they are kept in condition from which they will do better in future seasons. His idea corresponds closely with the results of experimental work, which briefly summed up is—that a light feed of grain on grass may return full value at the immediate season of feeding. In some cases it does not. However, the extra flesh and extra thrift of the cow insures an increased yield in future seasons that will justify the expenditure in feeding grain.

As to the matter of flies, putting the cows into a cool, clean barn and spraying them attends to that nuisance nicely. To prevent the accumulation of filth in which flies breed is a big factor in combating them. All manure should be drawn to the fields. That which drops in the barn yard should be broken up or removed. A cool shed with burlap hanging doors which will brush flies off as the cows enter are sometimes provided and the results are satisfactory.

The clean, cool barn provides for comfort also. However, not all milk cows have a large, light and airy barn attached to their shelter equipment. Shade trees or a cheap shed through which the cool breezes can blow will help. Plenty of clean, cool water is another factor to which we must pay particular attention. Briefly, feed the cow well, keep her comfortable and verily her returns will be profitable.

H. E. McCartney.

THE PASSING OF THE FARM CHURN.

To the Editor of The Homestead:

In sections where dairying has become a dominant feature the farm churn has become almost a relic of the past. Recently I spent a Saturday evening in a village in which there were more cows than people. All the good housewives were lamenting that they had no butter for Sunday and that there was not a pound in all the stores in town. An inquiry as to the reasons for all the families' buying butter revealed the fact that formerly all the dairy produce went to a co-operative creamery and was here

Plants at Chicago and Pittsburgh. Annual Output 12,000,000 Barrels

made into butter. It was a very easy matter for each patron to have carried to them by the cream haulers such amounts of butter as might be needed. About one year previous to my visit the business of the co-operative creamery had been taken over by a condensary which, of course, did not make butter. Few, if any, of the families had separators. Many of them did not require scrubbing. The co-operative creamery is a blessing to the housewife who is relieved of churning by it.

As a matter of economy, undoubtedly the creamery pays more for the cream than the market value of the butter would amount to, for under farm conditions not a high percentage of the total butter fat is secured in churning. The passing of the farm churn is one of the things that helps emancipate the farm woman from what has been considered drudgery.

H. E. McCartney.

THE HEART OF THE SUMMER.

To the Editor of The Homestead:

Very rarely have we in our section of the country felt the effect of dry weather in our dairy operations as we have for the past few weeks.

Dropping in at the rooms of the Guernsey dairy in a city of 60,000 in southern Central New York the other day, the man in charge told me his supply of milk had been cut off 50 per cent by the drouth.

"We have hard work to get what milk we absolutely must have, and every milk dealer in this city is frantic for milk," he said. Out in the country yesterday, speaking with a young man who has a herd of choice cows, he told me, "Our cows never shrunk as they have this summer. There is really nothing green in our pastures."

In the face of such a situation, a situation which affects all kinds of business, for the farmer is the backbone of the mercantile business, the problem is what to do to stem the tide when there is no rain. Feed is high in price, due to reports of a shortage in the West in the corn crop.

On our own farm we have begun to feed millstuffs. Last night we gave the cows gluten. We have also taken extra precautions that the water supply shall be kept good. The natural source of supply with us is a creek which runs through the pasture. There is some water in this yet, but it is stagnant and not very clean now; so we have hitched the gasoline engine to the pump at the drilled well and pump what the cattle will take, and they take a lot of it. We have a tank which holds twelve barrels and we intend that the cows shall find plenty of water in it whenever they come to the yard.

If there is any better way to keep up the milk flow I do not know what it is. We have two pastures, so that we can change off and provide as much variety as possible. One of these pastures we use through the day, while the other is reserved for the night pasture. We have a field of second crop alfalfa which we will probably mow and feed green soon.

Somehow, anyhow, the flow must be kept up as well as possible. If cows get badly reduced this time of the year, the chances are that they will not pick up again this fall. It is so hard to bring back the normal flow after the cows once fall off. We are praying for rain and that, too, speedily.

E. L. Vincent.

The total cost of producing milk containing 4 per cent butter fat is approximately four cents a quart, according to data obtained from tests conducted by the United States Department of Agriculture at New Jersey experiment stations. This figure is based on the cost of labor and the actual cost of growing and harvesting the products consumed, and includes incidental expenses such as bedding, stabling, interest on investment and depreciation, but not the time given by the former to supervision. The feeds used consisted of soiling crops of different kinds, corn, silage, mixed hay, oat and pea hay, alfalfa hay, corn stover, beet pulp, distiller's grain, wheat bran and oatmeal. The cost of feeding a cow a year was $169.95, based on the actual cost of growing and harvesting the products consumed, while, on the basis or market valuation of feed, the cost was $191.82.

An ingenious device for fastening wood buildings to concrete floors. Cannot rot. No bolts to rust off. Made in all sizes of heavy cast iron. Better, stronger and cheaper than all others. Ask your dealer for them or write for folder. Pat. and M'f'd. by E. A. PURDY, Amboy, Ill.

Stud Anchor. For barns, corn cribs, garages, using **concrete** wall, pier or floor. No sills needed, nothing to rot. Studs bolted to foundation.

Stud Anchor Works, Mendota, Ill.

HOLSTEIN-FRIESIAN CATTLE.

Pure-bred Registered

HOLSTEIN CATTLE

A leading agricultural paper speaks of the advantages to be derived by the American dairymen through the exchange of their small yield cows for large yield Holstein-Friesians.

"We then should not need 22,000,000 milch cows. We should be able to make our present quantity of milk with about 8,000,000 cows. Dairying would then be a safe and sane business, a paying and satisfactory occupation for our farmers."

Send for Free, Illustrated, Descriptive Booklets.

HOLSTEIN-FRIESIAN ASSN., F. L. Houghton, Sec'y., Box 113, Brattleboro, Vt.

65 HEAD REGISTFRED HOLSTEIN-FRESIAN COWS AND HEIFERS

I AM offering a splendid lot of cows and heifers for sale, due to calve in the fall to a son of King of the Pontiacs; or Sir Pontiac Ragapple Korndyke. Will make prices to suit for next sixty days. Also a few bulls of serviceable age for sale. Address ROCK BROOK FARM, Station B., OMAHA, NEB.

HOLSTEIN BULL AND COWS FOR SALE.

Come and see them or write.

FOX TERR'ERS FOR SALE--- The great little rat, watch and pet dog. Send for price list and description. W. Harr, Riverside, Ia.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

THE LATE-HATCHED CHICK FROM THE FARM STANDPOINT.

To the Editor of The Homestead:

When considering the late chick proposition, it must be borne in mind that there is a vast difference between the commercial grower, who makes a business of market chickens, and the farmer who raises chickens as a side line. The farmer has his regular customers and can realize a good profit on any of his products. Under this condition, the producer is able to procure a good price for broilers or fries at any time in the year. Ask a poultry packer in any average small town what he will offer for two to three-pound chickens in the late fall and winter, and he will offer you exactly what he is paying for grown stock, or about one-third what they would have brought in spring and early summer, and is averse to buying them at all unless there are enough to "fill a barrel."

We usually experience desperately hot weather in June and July and it is not conducive to good hatches. Parasites multiply rapidly under a sitting hen in torrid weather and it requires a continued warfare to keep them from using her up. Especially do mites wage war late in the season. The average farmer is not equipped to hatch with an incubator throughout the year, while the growers who make a business of poultry keeping are, and hatch every month in the year.

The sage advice is offered to farmers at institute and through the press to make a business of poultry and conduct it as the commercial growers. Every enterprise, no difference how small, requires a "business end," but when a farm flock is worked on the same basis as a flock cared for by a man whose sole business it is, then it is no longer a "farm flock," but a "business" of itself and will require the sole attention of one person.

Many methods of the commercial grower can be utilized by the farmer, but it is well to realize that there is a dividing line.

There is a place on the farm for a limited number of late chickens. The cockerels make fine fries through the fall and winter when one is tired of heavier meats. The pullets will never grow to quite the size of the early hatches, but they mature much earlier. it is a late chick, indeed, that does not get its feathers before cold weather. Nature has a few "instincts" of her own, and it is interesting to see a flock no larger than quail in full feather. These late pullets have their mission on the farm, but only in exceptional cases should they be used for breeders. They begin laying when the flock is getting broody and the eggs are not quite to normal size, but they are most acceptable either for the home table or market. Then all through the summer there are demands for roasts and these plump young hens fill the bill exactly.

The most successful late chicks we raise is where the hen, after raising an early brood, loafs and rests, and then "steals her nest," hatches eight to ten small biddies and hikes to the shady fields with them. This proceeding in July and August will beat the orthodox "June" hatch to a frazzle.

Minnie G. Stearns.

To paint and care well for buildings is economy, and it is loss to neglect to take good care of good property. The implement worth buying is worth taking care of, since its life may be prolonged and the usefulness continued. Many wagons grow old from neglect and exposure when they are little used. We heard of one man who claims that it is useless to build a shed or house for a wagon, for his wagon lasted a long time without such care—but it did fall to pieces finally, and from neglect, and not use.

The Kansas grain grading commission established a new grade of Kansas wheat. It will be known as red turkey hard wheat. The berries must be plump, round and smooth, the color dark brown, in fact, the finest wheat grown in the state. The grain men have been fighting for several years for the new grade, as it will establish a distinguishing Kansas wheat grade, a wheat grown almost exclusively in Kansas.

No More Scooping Corn Till You Drop!

Read the Verdict of the Farmer Jury:
"Any Farm Elevator is a hundred times better than the back-breaking drudgery of shoveling corn—but the Sandwich is the best by test!" These farmer jurors and near 15,000 back this decision by *owning* the Sandwich.

Sandwich Cypress Farm Elevator

Cribs corn liokety-split—stores small grain, too!

One boy with the Sandwich can crib as much as 7 men with scoops. Juror John F. Heikens' 11-year old son ran theirs as good as his dad, while the other children picked the crop.

Makes the Farmer a Business Man

Here's positive proof you are farming at a loss without the Sandwich. Corn huskers like picking where this Elevator does the drudgery. They'll work for less wages. They'll pick 10 to 15 bu., more per day. Juror C. H. Keller, Marshall, Minn., saved 1c a bu. this way. On hundreds of farms it has cut out the expense—the keep—of extra men and teams, and has added this too, to the farmers' profits. Some say this elevator increases their earnings 3c per bu.—some say 4c. Yet the Sandwich costs but little and is everlasting.

No Horse-Leaning Platform

The wagon-jack is overhead. And you drive right under with even the highest load. It dumps it in the hopper like clock work. Then hitch to the power—horse or engine—and the corn pours into your crib in a torrent.

No More Rotting in the Cribs!

The Sandwich Swivel Spout, roof extension or overhead conveyor puts corn in far corners where men never could. It fills your bins—your cribs—chuck to the top—like chain lighting!

No more rotting in the crib from shelled corn and silk. The Sandwich brand new Body Grate screens them all out. This Grate is closed tight when elevating small grain.

Write Quick for Free Catalog

And the name of a dealer nearby who will show you the Everlasting Sandwich. This book pictures it—tells the inside facts of Elevator construction—why we build of Cypress "the wood eternal," line it with steel and give you the best, though we make less money.

This book gives you, besides, the measurements and capacities of cribs and granaries. You'll want them if you ever build—you'll want to see the Sandwich anyway. Address now—

IF YOU WERE A CHICKEN

and ate from a dusty, dirty floor; drank from a questionable water pan, and slept, with a hundred others in a hot hen house, in the same clothes you work in, YOU WOULD APPRECIATE GERMOZONE. The difference in sanitary conditions between a wild chicken and most cooped chickens is almost as great as that between a chicken and yourself.

Germozone is more an antiseptic or germ killer than a medicine. It is especially effective for any germ disease of the skin or mucous membrane and that covers ninety-nine out of every hundred cases with poultry.

Germozone, given twice a week, with regularity, works wonders. Just a little in the drinking water. It purifies the drink; the food; the mouth, throat, crop and entire intestinal tract, giving those solid, slatey colored droppings, tipped with white, that every poultryman knows means chicken health. Don't wait until they get sick or quit laying.

Then too, **Germozone** is a ready and most reliable remedy for ROUP, COLDS, CANKER, SWELLED HEAD, SORE HEAD, CHICKEN POX, BOWEL TROUBLE, etc. It is the best known and most popular medicine for poultry. It is the most widely distributed in trade, handled by more than 10,000 dealers in the United States, at 50c per 12 oz. bottle. If you cannot get it from your dealer, send 10c for a sample bottle and name of nearest agent. "Lee's Poultry Book" and "Pointers for the Amateur," free.

IS SWEET-CLOVER GROWING A FAD?

(Continued from page 3.)

here for our experiment stations to select and fix a type of clover that is superior to the common roadside plant.

The result of this "sweet clover" picnic held on the Coverdale farms was to convince every one of the 500 hard-headed farmers that there is something to all this talk about sweet clover. In carrying on his work as a crop expert in Clinton county, Mr. M. L. Mosher had convinced farmers of that county that more attention must be paid to legume growing in the future than has been the case in the past. Mr. Mosher had induced these farmers to spend a day on the Coverdale farms in order that through their own observations they might be convinced that legumes actually benefit land. They found here cornfields showing every prospect of a seventy-five or even a 100-bushel yield, following a crop of sweet clover. They found thrifty live stock on these farms and viewed many fields that would produce an income of $100 per acre from seed alone, and bear in mind that these fields have previously yielded a cutting of two or two and one-half tons per acre. With these convincing lessons before them it is not surprising that the great majority were convinced, even against their will, that this so-called weed after all has an economic value that gives to it an important place as a soil renovator and as a revenue producer among the crops of the state.

INTERNATIONAL EXPOSITION ENCOURAGES HORSE BREEDERS.

For the purpose of encouraging horse breeders of the central West to produce more and better draft horses, the International Live Stock Exposition has inaugurated a sale and exhibition of grade mares and geldings, on a scale that has not hitherto been attempted in any country. At the 1913 exposition ten cash prizes will be given for single draft geldings or mares weighing over 1,800 pounds, shown to wagon. The first premium on this list is $150 and the tenth $25. Similar premiums are given for pairs of draft mares or geldings weighing over 3,600 pounds shown to wagon.

If Shire grades should win the first premium J. H. Truman & Son will give a sterling silver plate valued at $100, in addition to the cash premium, while if the winners are Percherons Mr. Fred Pabst offers a sterling silver plate valued at $100. J. Crouch & Son will give a sterling silver plate valued at $100 if the winners are Belgians and Mr. Henry Lefebure, of Fairfax, Iowa, will also add $100.

There is another feature of interest to breeders of draft horses. The International proposes to specially encourage horse breeding in those states which furnish the winners in the single mare or gelding classes in the 1913 exposition. To this end $150 will be distributed at the 1914 fairs to those states which furnish the winners in single mare or gelding classes.

INTERNATIONAL PRELIMINARY CLASSIFICATION LIST.

The dates for the coming International Live Stock Exposition in Chicago are from November 29th to December 6th. Entries close November 1st in the individual classes and November 22d in the car-load classes.

At this time we are able to announce that the preliminary classification list is ready for distribution. The classification is more liberal and complete this year than ever before, particularly so in the case of the draft horse classes and classes covered by ponies. There are futurities in Clydesdales, Percherons, Shires and Belgians and these classes should interest all draft horse breeders. A copy of the classification list will be sent free to all who will apply for same to B. H. Heide, secretary International Exposition, Union Stock Yards, Chicago, Ill.

T. H. Campion, principal of the La-Crosse county agricultural school at Onalaska, who succeeds F. E. Balmer, has assumed his duties at the school. Former Superintendent Balmer has accepted a position in the agricultural department of the University of Minnesota.—[Wisconsin Farmer.

How Cribbing is Done Without Scooping!

HERE is a truthful picture of a scene on thousands of farms every year. It illustrates how work, time and money can be saved by *any* farmer grain who now cribs corn and small grain by scooping. It shows how the "Little Giant," the famous 4-wheel Green Machine, dumps and elevates a 60-bushel load of corn in 3 to 5 minutes. It shows how to cut out the back-breaking wear and tear on your health *by eliminating the scoop shovel.* And the farmer in the picture illustrates how much easier it is to *watch* than to *work.* You need

The "LITTLE GIANT" Four-Wheel Green Machine Portable Elevator

Think what it would mean to you to drive on a jack, from either side, throw a lever, start horse or engine power and up goes the load, right into the crib, distributed to any part of the bin you desire. There isn't a bit of hard work to it—all done by *other* power than that produced by your own muscles.

And think what a saving in *time* that means! Think how easy it is to *get good huskers for less money*—they work for less where there's a "Little Giant" to do the back-breaking work. And they do 20% more work in less time.

We have demonstrated—and we have the proof—that the "Little Giant" makes money, saves work and saves time for the farmer who has 40 acres or more of corn to crib. Let us send you all the facts, figures and proof. If we do not convince you of the practical investment—value of the "Little Giant" we lose. You take no risk in writing us. We know what the famous 4-wheel Green Machine is doing for thousands of others and we know it will do as well for you. Will you give us the chance to *prove* that you *need* the "Little Giant" if you want to obtain your greatest possible profits.

Get All the Facts NOW

The "Little Giant" is a *business* proposition. It is an *investment,* the best you can make, because it's money safely spent and pays the biggest interest. It will last a lifetime with ordinary care because it's made of the best and strongest lumber and steel. Has many advantages over all others—features like the Friction Clutch Steel Pulley. Can be furnished with jack and wide-wheeled portable derrick. Elevator has tight bottom to save loose grain—whole outfit can be folded and moved or stored easily, anywhere. Shelled green corn and silk in the crib means rattage and molding. Our new screen feature in bottom section separates it from the ear corn and saves it for feeding.

But write for our book and *read* all the facts. You will be *glad* you sent for our catalog and we'll be glad to send it to you. Mail the coupon or a postal right now, before you forget it. Ask for Free Book of Crib Plans if you are going to build or remodel your cribs. Address

Fully Equipped **$850 - Detroiter - $900** Special Equipment

The Car that Starts New--and Stays New

Most 1913 automobiles have only improvements designed the year before—they are really 1912 models. But Detroiter cars are not season cars at all. Improvements are incorporated immediately. When you buy a Detroiter, therefore, you get a car that is literally up-to-the-minute.

Nine Standard Big Features.

In every main point the Detroiter sums up the best. The average price of cars with full floating rear axle, platform rear springs, long stroke motor, multiple disc clutch, and surplus braking power is $3,555.80. The Detroiter has these five features and four besides at $850 and $900.

Because of its correct design, high-grade material and big structural features, the Detroiter lasts. It is of comparatively light weight. The platform springs lessen shock and vibration so destructive to other cars. All in all, the Detroiter is essentially a car that stays new. It is an ideal car for country driving.

A Beautiful Car, Too.

As for beauty,—well the Detroiter is a car any man might be proud to drive. It holds its own with the most expensive cars.

We want you to see a Detroiter. We want you to ride in it. Your name on a post card brings you the opportunity and a handsome catalog

Improving Farm Conditions

TO induce people to remain on or return to the farm we must improve the conditions of rural life. To attract people to the farm we must make the farm more interesting, more remunerative, more free from excessive hard work and drudgery for male and female.

This must be done, or we will soon find ourselves producing less of the prime necessities of life than are required for home consumption. This condition would mean, first, weakness, then distress. That nation only which produces a surplus of life's necessities which other nations must come to it to obtain or go hungry and unclothed is in a position of supreme power. The chief factors contributing to the creation and, in some instances and portions of the country, restoration, of ideal rural conditions, would be: First improving the intellectual and social life; second, diminishing the burdens and hardships and inconveniences; third, increasing the returns from the labor expended and capital invested.

Sufficient schools, churches, good road, telephones, rural free delivery of mails, and increased transportation facilities, are slowly but surely supplying the first and second factors. Some other elements are needed, or some stimulation and extension of those mentioned.

I would suggest the formation in every county of a chamber of agriculture. Such societies for the county should be somewhat similar to boards of trade or chambers of commerce now established in the cities showing enterprise and progress. I would have such organizations authorized and directed by law. Perhaps some adoption of the act of 1894 under which such chambers of agriculture were established in Prussian provinces is feasible. They would have the care of all matters pertaining to agriculture and forestry in their districts, with specific regard to more complete co-operative organization of farmers. I would have these chambers officered by the most progressive and successful farmers and managed by experts. They woud discuss, plan, direct and promote agricultural operations and development in their respective areas. They would be active, dynamic forces giving life, energy and enthusiasm as they worked out the advancement, both technical and economic, of agricultural interests which they would officially represent.

Other German states have followed the example of Prussia in establishing these agricultural societies, and I can see how they might become of very great usefulness and benefit in solving the problems of the farmer. The average farmer in the United States earns about $700 per annum—less than $2 per day. That is, he realizes that much in gross returns from his toil and capital, after taking all the chances and working longer hours and harder than he would work in almost any other occupation.

It takes the farmer about ten hours of labor to earn $1, whereas the man on the railroad which carried his product to market earns $1 in about two and a half hours.

The situation is discouraging to our young people.

While the consumer complains about the price he pays for farm products that complaint is not to be lodged against the farmer—the producer. Somewhere between the farm and the dinner table billions of dollars, probably seven billion, disappear annually. Some portion of this belongs to the farmer. Some portion of it belongs to the consumer. We must solve this problem of distribution which today is absolutely unsolved in this country. This would aid in meeting the third requirement mentioned. Another thing is needed to complete the factor.

The total agricultural debt in this country is estimated to be about five billion dollars, divided as follows:

Secured by real estate mortgage, 55.9 per cent;
Secured by chattel mortgage, 14 per cent;
Secured by cotton crop liens, 7.8 per cent;
Secured by crop liens (other than cotton) 9 per cent;
Unsecured, due local merchants 5 per cent.

The farmers are paying from 6 to 12 per cent per annum interest on that five billion dollars; say an average of 8 per cent.

In most European countries for a great many years the farmers have not paid over 3½ to 4 per cent interest. By establishing a proper financial system, by organization and co-operation in dealing with cultivation, transportation and marketing, our farmers can save, not only $200,000,000 a year in interest, but they can increase the yield from their toil, the returns from their products and supply the comforts and conveniences of homes such as they ought to have. One thing to do is to devise a plan or system whereby their lands can be utilized as an asset when needed, at their value. Remove the ban on real estate as commercial security. Have their open accounts in their own banks and finance their own operations.

The American Commission, assembled under the auspices of the Southern Commercial Congress, and the Federal Commission co-operating with it, are now in Europe, studying diligently the systems which have been practiced in those older countries, which have been obliged to meet these difficulties years ago, and it is confidently believed the report from these commissions will produce epoch-making results in the advancement of our agricultural interests. Not only will a wise, workable plan of rural credits greatly benefit the farmer by enabling him to get what money he needs at a low rate of interest, but it will encourage saving and thrift, introduce business methods in agriculture, and go a long way toward solving the problems of monetary reform, high cost of living, and of the trusts in respect to agricultural products. In addition to improving and extending the influences making for unfolding the first and second elements above set forth, as applicable to them as well as the third, the new proposals I would offer, therefore, are:

A. The establishment of chambers of agriculture in the counties.

B. A system of rural banks, or agricultural credits, or farm finance, whatever you may designate it, by which, in conjunction with other co-operative organizations, the farmer will be able to save enormous sums now going as interest, profits to factors, and the like, such as no other industry could stand, have his open account at the bank, available as needed, his lands recognized and treated in the money market as an asset at its real value, with a basis of credit similar to the man engaged in business, enabled to so finance his affairs as to save himself from being obliged to dispose of his products at the lowest prices ever prevailing, and buy all his supplies always at the highest, time prices, and otherwise, in co-operation with his neighbors, finance all his operations, himself.

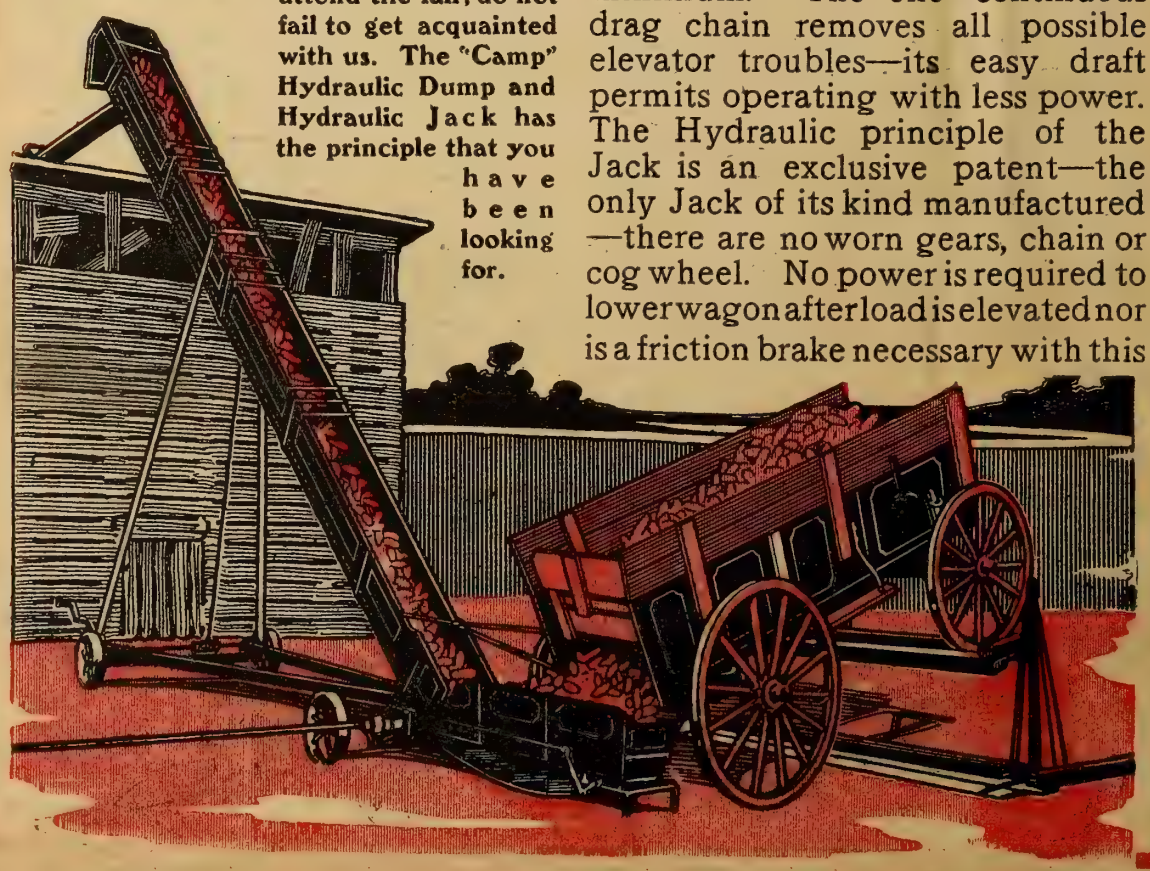
I might make the further suggestion that this principle of co-operation would make immensely to the relief of the women folks of the farm.

When the farmer takes the milk to the co-operative dairy he should carry the household laundry to the co-operative laundry and save the housewife that burden and dread, "washing and ironing."

As matters are now, why women and men will congregate and struggle along in crowded and unhealthy situations, in the cities, shortening their lives and dwarfing their posterity, when pure air, bright sunshine, wholesome water and at least sufficient food and reasonable comforts are offered in the country, in any and every portion of this land, is beyond my comprehension.—[Senator Duncan U. Fletcher, of Florida, chairman of the American Commision on Agricultural Co-operation and president of the Southern Commercial Congress.

At Your State Fair

Be sure and visit the "Camp" Exhibit. We'll gladly show you why a Hydraulic Grain Dump should be your choice. Our many years of experience makes it possible to offer you an elevator that is positively the most perfect from every standpoint. If you attend the fair, do not fail to get acquainted with us. The "Camp" Hydraulic Dump and Hydraulic Jack has the principle that you have been looking for.



Hydraulic Principle

Simplicity, Strength and Durability

These features put the "Camp" in a class by itself. Once you install this elevator you are certain of satisfaction. The cost of cribbing your grain is reduced to a minimum. The one continuous drag chain removes all possible elevator troubles—its easy draft permits operating with less power. The Hydraulic principle of the Jack is an exclusive patent—the only Jack of its kind manufactured—there are no worn gears, chain or cog wheel. No power is required to lower wagon after load is elevated nor is a friction brake necessary with this

HINTS ON FILLING THE SILO.

(Continued from page 10.)

the bottom into which should be inserted three or four feet of half-inch gas pipe with threads on one end to turn into the barrel and thus make a water-tight joint. The barrel should be set on a box or something that will bring the bottom up even with the blower opening of the cutter so that the end of the gas pipe will connect with this opening, leaving room to insert the hand and pull out a plug in the pipe. The suction of air will draw the stream of water into the cutter and all the corn will be moistened. The drier the corn the larger the stream of water should be. The cut corn when squeezed in the hand should plainly show moisture over the hand.

Two men should be kept busy inside the silo, one walking around with the distributor, always keeping the outside the highest, about twenty inches and tapering toward the center. The other man also tramps the silage, following the distributor and when on the outside circle keeps one foot sideways against the wall. There is no need to tramp the center very much, as it will take care of itself.

Nine men and a boy to carry water besides the two cutter men are all the help that is needed. Barring breakdowns they will cut from ninety to 100 tons of ensilage in ten hours.

Three years ago this fall I ran a large-size ensilage cutter and filled twelve silos in this vicinity. I found by actual experience that the ordinary man makes too hard work of handling the corn. There is a knack to it the same as everything else and it takes a little practice. I find that the riper the corn the sweeter the ensilage, but it must have plenty of water, because after the heating process there must be moisture left or it will burn out very dark and have a strong odor. I have only had three years' experience with the silo, but the first year I cut the corn too green and the ensilage was a little sour. I do not think there is any danger of getting too much water in the silo, but the stream should always be run through the blower. Water thrown on top after the silo is filled is wrong, because the bottom of the ensilage will burn dry before the water will penetrate to the bottom and sometimes we find a slushy, spoiled mess on the top.

I do not use oats or wheat, or anything like that on top of my ensilage, but I strip the ears from the last load of corn. In this way there is no waste of grain and I figure that the fodder in that load is not worth as much as five or six bushels of oats.

Our experience here is that silos having wood next to ensilage are the only ones that keep ensilage perfectly year in and year out.

G. E. NICHOLS, Cass county, Iowa:—I am a silo enthusiast, perhaps partly because I know what it means to dig corn fodder out of the snow every day of the winter, whether it is stormy or sunshiny. This will be my fourth year's experience with the silo.

I use a stave silo which is well painted on the outside and a few weeks before filling I spray the inside with crude oil which costs from twelve to fourteen cents per gallon. Five or six gallons will do the work on a silo fourteen by thirty feet. The wood at this season of the year is dry and readily absorbs the oil. I find that by this method very little adjustment of the hoops for expansion and contraction is necessary. If a good spring coupling is used on the hoops it will be adequate for this, at least after the first season. My experience has led me to believe that a stave silo constructed of good material and protected in this manner will last almost indefinitely.

We allow the corn to become well developed before cutting for ensilage. By this I do not mean dry, but the ears should be nearly all out of the milk stage and the husks on perhaps half of the ears dry on the outside. By running the corn binder two or three hours the evening before filling we are able, by starting a good team on the binder early the next morning, to keep far enough ahead so as not to interfere with the hauling in to the cutter.

So far I have been able to fill a silo of the size mentioned with one day's work and not a long day either. Our corn is grown only a short distance from the silo. Five men and teams do the hauling, each man loading his own wagon, throwing the corn bundles across the rack so that the butts all lay one way. In unloading the wagons the butts placed next to the machine and the team so stopped that the front half of the load may be taken off first and then step them up for the back half. In this way there will be no high lifting or turning of bundles. Do not tramp over the load. In loading the wagon start from the back end, laying the load up to full height which will be found to be only two or two and one-half feet, then take the load off as above stated from the front end clear down to rack. The rack should be a level platform so that the bundles will not crush down in the center, making a tangled mess which will kill time in unloading.

We use the distributor on the blower and two men in the silo. The feed should be well tramped, especially around the wall. If these little details are followed it is surprising how much feed can be put up in one day with this force of men.

I never use water where the corn is in prime condition, not overripe or badly frosted. Under the latter condition a small stream of water shot into the blower or on the feed just as it enters the rollers, allowing about one barrel to the ton if very dry or less in proportion to the condition of the corn; will be found of great benefit to the keeping of the feed. But I much prefer to fill at the proper time, dispensing with the water altogether.

After filling the silo we run a little straw or sheaf oats through the cutter for a covering. Sheaf oats are ideal for this purpose, as the moisture soon sprouts the oats making a carpet almost air tight.

The only waste of feed we have is a few inches on top and perhaps for a depth of two or three feet around the wall there will be a little mold, owing to the fact that so near the surface there is not sufficient pressure to drive out all the air. If it is desirable to begin feeding at once, of course no covering need be used. However, unless it is to be fed off quite fast I prefer to cover and let stand from four to six weeks until the intense heating process has subsided, after which it will stand exposure to the air much better. If two inches are fed from the surface each day and care taken not to dig down into the feed or unnecessarily expose to the air. It should keep sweet and good. When you get down into the silo where the pressure is greater an inch and a half removed each day does quite well.

There is nothing that will equal ensilage as the basic food for cattle, either in handling beef or dairy stuff. It is not necessary that the ensilage be made up entirely of corn. Any of the succulent feeds such as the clovers or peas may be run into the silo to good advantage, alternating load for load with the corn. The corn helps to pack and the acidity is not quite so great as in the case of filling with clover entirely. The clover should be slightly wilted when run into the silo.

The feed used in addition to ensilage should be varied according to the object in view. I have wintered cattle on ensilage without a bite of anything else and had them fat enough to obtain a ready market in the spring. Although I would advise feeding a variety of foods where it can be had, I have never lost a cow or animal of any kind with impaction of the stomach where a ration of ensilage has been fed. Neither have I had any trouble with scouring where the corn is properly matured. I also feed it to horses and hogs with good results although horses should be fed with good judgment. Some "don'ts" will apply here.

Don't feed horses moldy feed.

Don't feed horses ensilage more than once a day.

Don't feed over twenty pounds to a full-grown horse at one feed and colts according to age.

Hydraulic Jack. The "Camp" does the work quickly and properly.

Made of Cypress

Only the finest cypress lumber is used—you are certain of getting long service—this will outlast any other. The "Camp" Dump can be used continuously, year after year, without showing much wear. Every part is most securely made—it will stand hard usage—there's less breakage because of our special principle of construction.

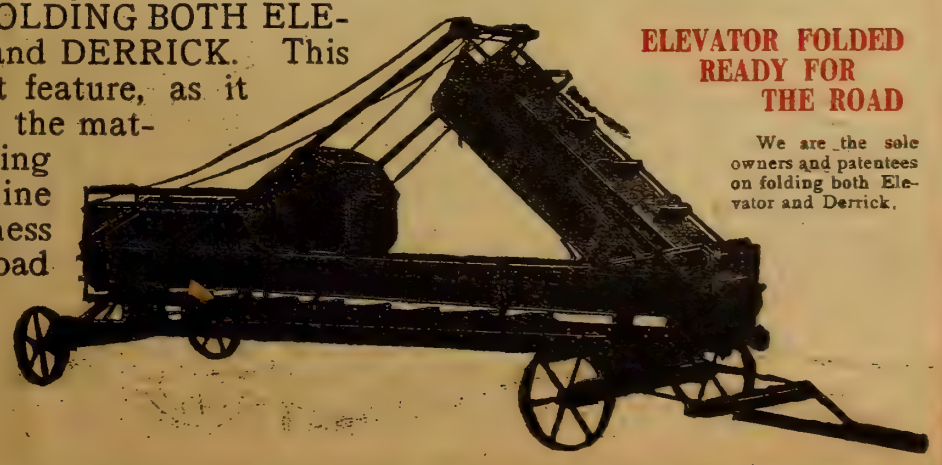
Camp Dump Can Be Folded

Note the illustration below. We exclusively control the patents on FOLDING BOTH ELEVATOR and DERRICK. This is a great feature, as it simplifies the matter of putting the machine in readiness for the road or moving it from place to place.

Another 1913 improvement is the screen attached under the first section of the elevator which permits shelled corn to drop through while elevating your ear corn.

Free Catalog

Write today for catalog and full particulars—let us tell you all about our wonderful Hydraulic Feature and numerous other strong points—then when at the Fair just make a comparison—you'll admit that the "Camp" is the one elevator that exactly fits your needs. A postal today brings free catalog.



ELEVATOR FOLDED READY FOR THE ROAD

We are the sole owners and patentees on folding both Elevator and Derrick.

Cleans like Magic without Scouring

In addition to its value on the farm as a preventive of hog cholera—as a disinfectant—as a water softener and for making soap—

Lewis' Lye

The Standard for Half a Century

is a household necessity for cleaning purposes. It cleans anything and everything like magic, *without scouring* and does its work with less labor than any other so-called cleanser on the market. It is, without question, best for cleaning

— Bath Room Fixtures
— Kitchen Utensils
— Milk Pans or Churns
— Woodwork
— Windows.

Lewis' Lye—the purity and full strength of which is guaranteed—is the only lye made and marketed by manufacturing chemists. Booklet describing the many uses of Lewis' Lye, mailed free on request.

AMONG OURSELVES.

A pair of pictures are presented to the circle this week. They are contributed by one of our long-time friends, "Sally Lunn," and will, by their contrast, give a fresh luster to the everyday joys of our everyday lives. These pictures help us to see what we have that is so really well worth while:

ONE DAY OF LIFE CLOSE DRAWN TO THE TENDER HEART OF NATURE.

The soft sweet twitter of a bird, a cool gentle breeze to awaken me from my slumber just as the day is breaking. I rise from my bed and hastily prepare to answer the call of "God's out of doors," to come out and feast my eyes on the glory of the early morning and breathe deeply of the sweet June air that means so much of life to all. The eastern sky is ablaze with the glory of the rising sun, scattering the mists that hang low over the valley. Myriads of diamonds glisten on leaf and blade, and out there among the pine trees feathered songsters carol a greeting to the breaking day. Even the fowls of the barn yard join in the morning chorus. But 'tis not enough to just step out of the door and from there view the wonders of the morning; nature invites me still farther. Come with me and let us follow the path through the meadow and then on into the woods. Oh, what a wonderland they are at this early hour. Every blade and leaf is wet with dew, but never mind if you do get wet, you will feel repaid for all the wetting. Just smell the balm—how the dew brings out the fragrance. See how those oak leaves glisten in the rays of the sun. And there, close by the brook the elders are white with bloom, and, oh, how they make you draw long, deep breaths to get as much of their sweet perfume as you can. Hop vines clamber over the alders that line the bank of the brook. Tall graceful ferns nestle in the cool, moist earth under the trees close at the water's edge. Wild bloom of purple and gold is scattered everywhere, and out there in the open, there among the bogs, like a regiment of soldiers stand the tall green cat-tails. Red lilies lift their stately heads well above the thick marsh grass. Myriads of dainty bluebells hang from slender green stems and there just waking from his slumbers is a big bumble bee. My, what a fuss he makes about getting up so early. Oh, yes, the crows are up, too, or at least Pa crow is and I guess he is scolding Ma crow because she is late with his breakfast. And I fear we will be late to ours if we do not retrace our steps, but let us follow the path along the brook to the bridge and then through the cornfield, all fresh and fragrant in the morning air. Now just a step farther across the pasture lot and then home, and breakfast and various household duties. By this time the sun is high and hot, the birds are more quiet now, the dew has vanished, but come out with me again. We will go to the garden. See those red tomatoes. Don't they look luscious? And those cucumbers and all the other vegetables. See that Swiss chard how crisp and white it stands there. We will gather some for our dinner. And we will hasten dinner that we may go out this afternoon. We will go to the hills and from there view the valley. Yes, this hill is high, but surely you don't mind climbing. It is good exercise and the view from the top will repay for the effort put forth to get there. Now look, oh, just look! Did you ever see anything more lovely? Hills? Yes, lots of them. They rise and fall like great billows of the ocean, encircling the valley. Yonder the village nestles close to the foot of the hills, half hidden among the trees. And farther away toward the west the city lifts its spires. See how the river winds in and out among the trees. The glint of the hot afteroon sun is like burnished gold on its surface. All over the valley we can see the homes of the farmer folk, and here and there herds of the gentle kine feed lazily in the pastures. Isn't it lovely? But our stay must be short, we must be on our homeward way. Yes, it is easier going down than coming up. But I am glad we came. We will return by the clover field, all red with blossoms and pick our way through the brush to the brook and cross right here on this fallen tree. Can't? Oh, yes, you can. Stand straight and step quickly. See! like this. There now; you try it. Look out, you will fall into the water. Here, take my hand. Now come. There you are. Now up this steep bank and then home through the woods and across the pasture lot once more. Here we are and I declare it is supper time. You rest while I lay the cloth for tea and then when it is over we will just sit out in the yard and watch the sun sink away behind the pine trees. See how the shadows lengthen across the lawn. The fowls of the barn yard have gone to roost, the cows are lying down in the lane, the shadows deepen, a faint touch of moisture in the air tells of the coming dew, the birds are silent, except the whip-poor-will who has begun his night song away over yonder in the hills, but he will soon come nearer. Yes, there he is now, up there in that tree, whip-poor-will, whip-poor-will. All night he will sing his queer little song. The light of day has gone, the night has deepened about us, all nature seems wrapped in slumber and now we, too, will lie down and rest with thankful hearts, to the Giver of all good gifts for all He has this day given to us—good night.

ONE DAY OF LIFE CLOSE DRAWN TO THE THROBBING HEART OF THE CITY.

The low rumble of wheels, the clang of the street car gong, and sleep vanishes. Slowly I rise from my bed (rumble—rumble). I look out of my window (clang—clang). How lovely the brick walls look in the morning sun (rumble—rumble). And how fresh the morning air is with the smoke from car and factory (clang—clang). I must hurry and get breakfast—it is late now. I did not like to get up this morning. Somehow I felt so tired (chuck—chuck—rumble—rumble). But I must get my work done and go to the store for vegetables for dinner. Not an extra good assortment on hand this morning, Mr. Groceryman. How do you sell them? (Chuck—chuck—clang—rumble.) These onions are five a bunch, radishes the same, tomatoes ten cents a pound (clang), beets (clang). Well, I will take one pound of tomatoes (rumble—rumble—r—r—rum—m—ble) and a bunch of onions (clang—clang—clang). But I must hasten. Oh, dear, it is so hot and dusty I wish it would rain (toot—toot—rumble—clang). I will just draw these shades and keep out the heat all I can (toot—toot—tramp—tramp). I dread to get dinner, it is so hot (clang (toot—rumble—tramp). I must go to town again this afternoon and I think I will take in a few sights. Perhaps it will help me to forget the heat and dust. I will walk down this street past those large stores. How lovely the windows look! See those trees—I mean suits, just the latest styles, so close fitting, you know (clang—clang—bang—toot—toot), and those flower beds—no, I mean those hats. My! but they (toot) are (bang) great (clang). Is'nt that imitation of rabbit ears just lovely (rumble—rumble—) on that (r—r—r—r—um—m—ble—toot—toot) very large gray turban (chuck—chuck)? But I must be going. I think I will go into the picture parlor. Well, did you ever! Such horrid pictures and such a racket coming in at the door and such stuffy air! I think I will move along and walk down this street and look at more of the store windows. Just see how beautiful the landscape—or decoration, I mean, in this window—some more of those lovely styles in pine trees. Oh, dear! no—I mean suits. But there is a dark green one that in color is like a pine tree, and so slender. I wonder now if it wouldn't just about fit me (toot—toot—bang). I suppose I might walk out to the park and get a glimpse of nature. Well, it sure does look nice out here (rumble—toot—clang—whiz). Those round beds of flowers look so like some of the (bang) large picture (toot—toot) hats in the store windows, and (whiz—rumble—) those tall poplars over there look just like that (whiz—z—toot—toot) beautiful new suit Mrs. M. just bought (tramp—tramp—clang), and just look at that pond! Doesn't that remind one of the ocean? I will just sit (whiz—toot) here on this easy seat and try to imagine I am out in the country (whiz—z—z). My! but I would love to be, but I would not say so to those country people (clang—clang—rumble—toot—tramp). I can sit here and imagine this pond is the ocean and those sparrows are sea gulls and that does help a lot to make it really seem like the country (toot—toot—whiz—z—z). My! but it is hot. Guess I will go home. Think I will take a car if I can get one—here comes one now. I will just hold up my hand and they will stop. These street cars are so convenient and accommodating (clang—clang—rumble—r—um—um—umble). Well, of all the nerve (toot—toot—whiz—z—z)! I wonder do they expect me to swing my arms off. I will try (whiz—z—z—). Well, I nearly got run over then by that horrid auto. Wouldn't have one no how. Here comes another car. I will try for this one. Now see me stop this one (whiz—z—z). Oh, dear! just as I was going to swing my arm that wretched auto had to come along. Now once more I will try for this one. Must I swing my arms off (clang—clang—whiz—z—z)? It's a wonder you wouldn't toot before you are right on to anyone(toot). You toot, will you, now you have gone by (rumble—rumble—clang—clang). Well, I won't try for another. I can get home while I am standing here at the very risk of my life. Well, I am glad I am home and it is supper time, and (clang—clang) after supper I will sit out on the porch and enjoy the quiet (whiz—z—z—toot—toot) evening. How lovely the shadows look as they lengthen against that brick wall (toot—clang—whiz—z—tramp), and the reflection of the setting sun (rumble—rumble—toot—toot—whiz—z) on those windows across the way (rumble—toot—clang—bang—tramp). How the shadows deepen (whiz—z). The night falls quickly (toot—toot—whiz—z—z). How restful and quiet it is (tramp—tramp—clang—clang). This quiet (rumble—rumble) makes me so sleepy (toot—toot). I will retire for the night (clang—clang—rumble—rumble). I know I shall sleep soundly tonight it is so quiet and restful (toot—clang—toot—whiz—z—z—z—rumble—toot—tramp—whiz—whiz—z—z—z). Asleep. Fitful slumber—restless dreams.

The corn relish is sent for your cookbook by "C. R.," and the cream puff recipe comes from Grace D.:

Cream Puffs.—One cup of boiling water; one cup of butter; two cups of flour. Let the water boil with butter, then stir in the flour; let cool; add five eggs stiffly beaten; beat well; drop in muffin rings; bake one hour. For filling: Heat one pint of milk; beat one-fourth cup of flour; one cup of sugar and two eggs together; add this to the milk and boil three minutes; fill puffs with this cream when ready to serve. Corn Relish.—One dozen ears of sweet corn; one head of cabbage chopped fine; one red pepper, more if not too strong; one cup of sugar; one tablespoonful of salt; one tablespoonful of mustard; one teaspoon of celery seed; mix; cover with vinegar and boil twenty minutes; can in pint cans. This is fine, keeps well and is good to use any time of the year.

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

Give truth and your gift will be paid in kind,
And honor will honor meet;
And a smile that is sweet will surely find
A smile that is just as sweet.

Has someone been "mean" to you—someone who, you thought, was the salt of the earth? Thank the Lord there is a cure for broken hearts. It is work, work, work. In the future are joy and peace for you, but you have got to work for them; they never come to the blue, lazy, whining individual. Brace up!

MOTHERS! ATTENTION!

An overtired mother cannot make sunshine in the house. Try to take half an hour of complete rest some time during the afternoon. If you were ill the children would have to get on without you. Leave some things undone while you sleep.

LAUNDERING SUMMER DRESSES.

Before the dresses are washed the colors should be set as much as possible. Pale blue dresses should be soaked at least two hours in water containing sugar of lead. Use one ounce of the lead to one pail of boiling water, and be sure that the lead is entirely dissolve before the waist or dress is put into the water, or streaks may be the result. Do not put in the gown until the water is tepid. Heat is destructive to delicate tints. After soaking the gown the required time, carry the tub to a shady snot, put the dress on the line without wringing it, and let it get entirely dry before washing it. Other delicate shades may be treated in the same manner, but common table salt will usually set green, lavender, pale green and yellow. Use a teacupful of salt to a pail of water. If the dress is only slightly soiled, soap need not be used. Bran, potato and rice water are excellent substitutes. To make bran water boil two quarts of bran in two gallons of water; when cool strain it, add one tablespoonful of borax to the liquid, and use it in place of soap suds in which to rub the goods. Rice water is made in much the same way, by boiling one pint of rice in a gallon and a half of water and straining it. To make potato water, grate raw potatoes to a soft pulp; add water in the proportion of one pint to a pound of potatoes; pass the mixture through a sieve, and when the potato pulp has settled, pour off the water and use it. If soap is needed, use a mild, neutral one. Hang all delicately tinted dresses in the shade. Many colors that will stand washing will fade badly when exposed to the direct rays of the sun.

THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Aunt Mary, Hawley, Minn.

THE SKY.

(First Prize.)

I love all of Nature's works, but I think the sky is the most wonderful. It is Nature's great picture-book The clouds are the pictures. Some are painted beautifully, while others are the purest white.

There are no two pages alike in this great book. Nature turns the pages often, for every time we look at the sky there is a different page covered with hundreds of beautiful pictures.

Most people just look at the sky once in a while to see if it looks like rain, but I think we should look at the sky more than we do, for why does Nature carve the clouds into such wonderful statues and paint them such

beautiful colors if she did not mean for us to look at them?

—Mildred England, Age 13.

How We Made Some Games.
(Second Prize.)

My sister and I have lots of fun playing, but we wanted some more games. I am going to tell the cousins how we made a set of croquet and a game of jackstraws.

One evening when sister Hesperia and I were playing marbles, I said, "Let's say that when a marble hits another it gets two trials at getting on the line."

Hesperia studied a while and then said, "No, I have a better plan than that." She did not tell me what her plan was, but went into the dining room and brought out some toothpicks.

By this time I knew what her plan was and suggested pins would be better, so we hunted up twenty pins. Two of these served as stakes, the rest as arches. About this time two of the neighbors, Mildred and Ferryl, came over. When Ferryl saw what we were doing she went home, saying she would be back in a minute. When she came beck she too had a croquet set made of pins and wire. The next morning Mildred made her a set.

Now we began to think what we would do for mallets. Ferryl and Mildred had each had a parlor croquet

The big Ward thousand page Catalogue is a teacher of domestic economy in its broadest sense.

It teaches "price-economy" *and* "quality economy." Quotes dependable merchandise of the highest possible degree of quality for prices asked. This great lesson in Domestic Economy is made possible by the practice of strict *commercial* economy — selling direct to the consumer, by mail, merchandise purchased by train and boat load. A method of merchandising that reduces distribution expenses, cuts wholesale costs and lowers retail prices. A method of merchandising that enables you to realize a substantial saving on purchase prices, without *sacrificing quality.*

Listed in our latest and greatest Catalogue is nearly every necessity and luxury used and enjoyed by man, woman or child — *honest, dependable* merchandise correctly pictured, truthfully described and reasonably priced.

If you have not yet received a copy of this big book, sign and send the coupon for one to-day.

Set, so they used the mallets of these, although they were a little large for the balls, which were marbles. As Hesperia and I had no mallets we used a hammer.

Now I am going to tell you how we made our jackstraws. Ferryl has a game of jackstraws that we play with often. So one time I got a few toothpicks and tried to play jackstraws. The next time I got a chance I told Hesperia and we went upstairs where we cut and painted guns, canes, umbrellas, and everything else necessary for a game of jackstraws. After that Mildred made a game and then we each had one. Now Hesperia and I are planning for a game of anagrams.

—Beth Em, Age 12.

Bugs.

(Third Prize.)

How many of the young folks have ever taken notice of the worms and bugs that destroy our crops? They are just as bad as weeds and in some instances are worse because they are not so easily destroyed.

Many of us amuse ourselves with a reddish-brown bug which is known as the "click beetle," being so called because when placed on its back it will make a clicking sound and throw itself into the air.

The click beetle seems very harmless, and very few of us would believe we were handling the adult form of wire worms, which is one of the worst insect pests which the farmer has.

There are many other insects which fly in great armies or burrow in the ground to rob the farmer of his crops such as: cutworms, chinchbugs, grasshoppers, potato bugs, etc.

—Buffalo Bill.

PLEASANT FIELDS OF HOLY WRIT
Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON
3d Quar. Lesson 8, Ex. 15, 27-16, 36, Aug. 24, 1913.

THE BREAD FROM HEAVEN.

That march of mystery—Israel's journey through the wilderness. A desert anywhere has a fascinating weirdness. Absence of shade, water, and life make it a phantom place. In these characteristics the Sinaitic Peninsula surpasses all others. No wonder the Hebrews called it great and terrible, a howling wilderness. Such unnatural environment cannot fail to have its powerful influence. The traveler over that route today feels the subtle influence of the place. He can appreciate the depressing sensations of the caravan nation. In addition to these physical discomforts was the fear of enemies. The commissariat problem was also urgent. Under most favorable conditions the provisioning of such an emigrant host would have taxed an expert quartermaster general. But the exigencies of this case make it the most remarkable of its kind in history. For the people in such an environment not to have murmured would have been unnatural. When the subtle effect of the physical scenery, the imminence of attack, and the scantiness of provisions are all taken into consideration, the repining is not a surprise. Yet, in view of the wonders God had done in Egypt, and even already in the wilderness, the faith of the Hebrews should have been more buoyant. Yet fear is the very worst of epidemics. In the shortest possible time the whole nation was inoculated. As always happens under such conditions, the people very much overrated their past advantages. So we find them sighing for the flesh pots of Egypt. As also happens, they underrated past evils. The bitterness of the bondage was softened by the happy release from it. And so the whole congregation murmured against Moses and Aaron in the wilderness. This melancholy stampede was a real disgrace. Had they taken time to consider, they would have found ground for hope. The situation was really not extreme. The Hebrews had brought with them large flocks. They must have found pasture. From this source they would derive milk, butter, cheese. They could have flesh for food, and that, too, without diminishing their herds, using only the natural increase. Other tribes found sufficient means of subsistence in that locality. There are spots even today, in that very desert, where the Bedouins still sow and reap. Again, the Israelites could supply many wants by purchase from passing caravans. It would do them no harm to go on half rations for a while, if necessary. Again, they were not to be always wandering about. They remained months, and even years, in certain localities. So the situation of these emigrants was far from desperate. The long-suffering patience of God had a remarkable example in this instance. A gracious redress of the people's grievance is promised. The last word of the people's complaint is "hunger." God's first word in reply is, "I will rain bread from Heaven." With reference to the nature and origin of manna, it will be found best to take the middle course between the "badly literal" and the "embellishments of wonder-loving legends." There is in this very locality a natural production still called manna by the Arabs. It oozes and distills from the tarfa tree. It must be collected before sunrise, for only then is it found in a coagulated state. It dissolves as soon as the sun shines on it. This natural product seems to be the physical basis of one of the surprising means of sustenance of the wilderness. How far it may have been idealized by a grateful memory, it is hard to say.

BEST EVER
SULKY AND GANG PLOWS

Do the Best Work at the Least Cost Per Acre

The above illustration shows the BEST EVER SULKY completely turning under a large crop of weeds.

The bottoms of the "BEST EVER" are so hung and the frame so perfectly balanced that an even furrow is maintained at all times.

The moldboards are so shaped that every furrow is completely turned over and thoroughly pulverized.

LIGHT DRAFT The "BEST EVER" is the lightest draft plow built. The wheels and tongue run straight down the furrow like a wagon. The wheels do not dig into the furrow walls nor does the pole run at an angle as on other plows.

EASE OF OPERATION The bottoms are raised and the frame leveled, all by one easy footlift operation. All landside friction can be quickly overcome by eccentric washer on rear furrow wheel. No bolts to bother with.

DURABILITY THE BEST EVER PLOWS are made of the best steel and malleable iron. Wheels are of steel with dust proof caps. Oil but once a season. All shares of our famous ACME STEEL.

ACME STEEL is the only perfect plow steel made. It makes the only steel shares that are positively guaranteed against breaking in the field or in retempering. Anybody can easily retemper them any number of times. Keep them hard and sharp all the time. They scour perfectly, lighten the draft, plow more acres per day and plow them better.

"Acme Shares Don't Break"

A College Adapted to Present Day Needs

Meets All The Standard Requirements

Our splendid business and trade courses are adapted to present day needs. All courses are arranged to care for the needs of students lacking the required entrance credits necessary in other higher educational institutions, also for the student ready for the regular standard college course.

School practically all the year. Enter any time. Vigorous, thorough instruction by expert specialists. Small tuition fees. Minimum living expenses. Every aid for ambitious students with limited time and money. 2,000 students each year. Graduates in paying positions everywhere. Magnificent buildings, fully equipped. Equal to best Eastern schools.

School terms open Sept 2, Oct. 13, Nov. 25, 1913; Jan. 5, Feb. 17, Mar. 30, May 12, June 9, 1914. New classes formed each term. Students advance rapidly.

Colleges and Schools

Liberal Arts Standard, Classical and Scientific Courses. Also preparatory and Elementary Preparatory Courses, in which students of all degrees of advancement are admitted.

Normal Didactic, State Certificate, County Certificate, Primary Training—most complete training for teachers in the West. Graduates receive state certificates.

Engineering Civil, Electrical, Mechanical. Also one-year Telephone, Electrical, Steam, Machinist's and Automobile Machinist's courses. 12-weeks' courses in Gas, Automobile and traction Engineering. Shop work from beginning.

Pharmacy 1. Regular Ph. G., Ph. C., Pure Food and Iowa courses. 2. Practitioner's Course and Extension Courses for Druggists. One of the largest, best equipped Colleges of Pharmacy in the United States.

Oratory A thoroughly equipped College of Oratory directed by most competent teachers.

Music A Complete College of Music. Piano, Violin, Voice, Orchestra, Band, Chorus, Harmony, Mandolin, Guitar, and Supervisor's Course in Public School Music. A fine faculty of teachers, each an artist in his line.

Commerce Business, Shorthand, Telegraphy, Penmanship, and Civil Service. A thoroughly equipped Business College said to have one of the finest business exchange departments in any college. Graduates of Business, Shorthand and Telegraph courses guaranteed positions.

Home Study Over 8,000 Students Have Enrolled in the Correspondence School. Almost any subject you wish by correspondence.

Expenses Board, $2.25 and $2.75 per week. Tuition in preparatory College, Normal and Business Courses, $18.00 a quarter. Send for catalogue. State Course in which you are interested. Address

IS ALFALFA A MISFIT CROP?

To the Editor of The Homestead:

So much is being said and written about alfalfa that one is apt to infer that it is considered the one important crop in every section of the country. College experts are exploiting it in bulletins. College professors and others are preaching it from special railroad trains and carrying the enthusiasm still nearer to the farmers by automobile, all heralded days in advance in order to reach large numbers of country people. This may be necessary in order to set men to thinking and a few to acting on the advice given, for people reared on farms, in enforced isolation from their kind, are naturally conservative. They do not accept new theories without consideration or begin new practices without reasoning the matter out in their own way. They listen, but keep up an awful thinking. They do not deny the claims made for alfalfa as a soil renewer, or as a ration for domestic animals, for these are matters they are incapable of deciding without an actual trial in the feed lot and on the land seeded to it and afterward used for other purposes. What they want

to know is "How will alfalfa work in a proper rotation so that all the farm may be kept at its best, and not alone the one field adapted to the one crop so much talked about?" They learn both by inquiry and by actual experiment how difficult and expensive it is to secure a perfect stand of alfalfa and reason from these premises that they cannot afford to plow up an alfalfa field so long as it will produce a profitable crop. The question may be asked "Why should it ever be plowed when once well seeded to alfalfa?" The answer is, "Rotation is the secret of soil conservation. Red clover works into this rotation beautifully. We raise four to five tons per acre with only two mowings, and the next year raise ten to twenty bushels per acre more of corn than by any other method costing the same." I know of my own knowledge that this is true.

On a farm devoted to general agriculture and dairying a proper rotation is a very important matter. On it depends the profitable use of land at its present value because the fertility of the land must be maintained if not increased. Unless alfalfa will take the place of corn, potatoes, and all the sowed crops its place must be confined to certain fields where permanent pastures or meadows are desirable.

According to estimates made by the state department of agriculture more than fifteen and a half million acres in Iowa are devoted to the production of farm crops exclusive of hay and pastures, and more than twelve million acres are in the two crops last named. Alfalfa cannot possibly take the place of these two for the reason that a large proportion of both is obtained from land too low for its profitable culture. The present permanent meadows and pastures are made up largely of lands subject to overflow or are too low to be thoroughly drained. Alfalfa will not do well on either of these, hence it must be confined to corn land.

Corn is the most important crop in Iowa. About nine and a half million acres are devoted to it. It has been demonstrated that corn ought not to occupy the same ground more than two years in succession, hence the necessity of a change of crops. Unless alfalfa will fit into a proper rotation with corn as the chief crop it seems to me that the only place for it is where a permanent meadow or pasture is wanted, using red clover or other legumes for the needed rotation.

I can understand why a farm devoted to dairying exclusively, or one where the production of beef is the chief aim, could be profitably seeded to alfalfa, but for the average farmer where corn is the principal crop, some system of rotation not to exceed four years is absolutely necessary to the maintenance of soil fertility. It is folly to think of putting all the corn land of Iowa into alfalfa, and the latter is not so desirable a crop for a short rotation as red clover or some other soil renewer that is easier to raise.

Iowa. Eugene Secor.

Richards and Roberts, an Oregon firm, have purchased 19,000 head of sheep and lambs near Billings, Montana, which will be shipped to Oregon this fall and be distributed for feeders.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high grade, perfect fitting, seam allowing patterns at 10 cents each postage prepaid. Full directions for making, as well as the amount of material required accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

5996 Children's Dress.—Linen, gingham or percale can be used to make this dress with the collar, cuffs and belt of contrasting material. The dress is made to be slipped on over the head. The pattern provides for a pair of bloomers which are attached to an underwaist.

The pattern 5996 is cut in sizes, 3, 5 and 7 years. Medium size requires 3¾ yards of 36-inch material with ⅝ yard of 27-inch contrasting goods. Price of pattern ten cents.

6246 Ladies' Shirt Waist.—This shirt waist can be used to complete a dress or it can be worn with separate skirts. The long or short sleeves can be used. Linen, madras or silk can be used to make this shirt waist.

The pattern 6246 is cut in sizes 34 to 42 inches bust measure. Medium size requires 2⅝ yards of 36-inch material. Price of pattern ten cents.

6071 Ladies' Shirt Waist.—This shirt waist can be made with or without the box plait at the front. It can also be made with the standing or rolling collar. Linen, madras, percale or silk can be used to make this shirt waist.

The pattern is cut in sizes 34 to 42 inches bust measure. Medium size requires 2¼ yards of 36-inch material. Price of pattern ten cents.

6145 Boys' Suit.—Every small boy needs a play suit and here is an excellent pattern for making such a garment. This suit closes at the back and can be made with either the long or short sleeves. The high, round or square neck can be used. Linen or chambray can be used to make this suit.

The pattern 6145 is cut in sizes 2, 4 and 6 years. Medium size requires 1¾ yards of 36-inch material. Price of pattern ten cents.

5964 Girls' Dress.—The blouse of this dress closes at the left side of the front. The skirt is a three-gored model joined to an under waist. Serge or broadcloth can be used to make this dress with the collar and cuffs of contrasting material.

The pattern 5964 is cut in sizes 6, 8, 10 and 12 years. Medium size requires 2¾ yards of 44-inch material with ½ yard of 27-inch contrasting goods. The under waist requires ½ yard of 36-inch material for the under waist. Price of pattern ten cents.

6024 Misses' and Small Women's Skirt.—This skirt is cut in two gores and can be used for the miss or small woman. It can be made with either the empire or regulation waistline. The closing is at the left side. Linen, serge or cheviot can be used to make this skirt.

The pattern 6024 is cut in sizes 14, 16 and 18 years. Medium size requires 2⅜ yards of 36-inch material. Price of pattern ten cents.

6055 Boys' Dress.—Here is a clever little dress for the young lad. It is easy to make and may have long or short sleeves. The gament closes at the front and a belt holds it in place. The collar, cuffs and belt are of contrasting goods. Any of the popular wash fabrics may be employed.

The pattern 6055 is cut in sizes 1, 2 and 3 years. Medium size will require 1¾ yards of 36-inch material and ⅜ yard of 27-inch contrasting goods. Price of pattern ten cents.

"Good roads help the home, church, school and will benefit the health of the citizen. We can build them and know the exact cost, but no horizon can bound the measure of their benefits."—Governor Major of Missouri.

USING ALL THE CORN CROP.

To the Editor of The Homestead:

Of all things that the farmers are vitally interested in at this time a silo perhaps is foremost. With the rapidly advancing price in land values we will have to take care of all the products of the soil in order to declare a paying dividend on our farms, and as our great crop is corn that is the one crop we must look well to for our profits. It is claimed that by putting corn in the silo that the feeding value of an acre of corn is increased forty per cent. That is over corn that is husked and left for the stock to glean the field and the stalk leaves to leach in the weather. However, I don't know that this is true, but I do know that there is practically no waste where an acre of corn is put in the silo at the proper time. And I do know from observation that a lot of good feed goes to waste every year in our stalk field. An acre of corn that is ready for the silo will make from ten to fifteen, and often more, tons of ensilage, and forty pounds of that silage per day will keep a cow in thrifty condition and with a balanced ration she will make a good gain.

Now let's figure a little and see how much corn it would take to keep a cow in good condition in the average stock field in March. It is very easily figured as to the amount of corn a cow is getting out of the ensilage, as an acre of corn that will make sixty bushels and produce sixteen tons of silage would have 3,600 pounds of corn in it or about six pounds of corn in every fifty-four pounds of ensilage. I am afraid that three pounds of corn morning and evening would only be an aggravation to the cow after she has filled herself up on Northwest wind and corn stalks all day. Of course it takes some labor to take care of the ensilage at filling time, but you are amply paid for that in convenience of having the feed where it can be comfortably handled in all kinds of weather in the winter and spring.

However, I am not getting at my subject. Construction of the silo seems to be a proposition that every man will have to work out for himself according to what will best fit his conditions. There are many makes and kinds. The most common is the wood silo. In Iowa there are a great many hollow brick, or Iowa silos as they are called. In the East there are a great many concrete and some stone silos. All are good when properly constructed. A silo is an air tight compartment. In other words if you can exclude the air it will proceed to hermetically seal itself on top and the heavy pressure will settle it against the side so as to seal it and make it air tight. Now if the walls are air tight your loss will be very small. Wherever you find an air hole in the wall you will find a bunch of moldy silage. Therefore it is a matter of building a good wall of whatever material you expect to use.

As to the comparative cost of these different silos, of course conditions will govern that somewhat as to the material at hand and the cost of labor. I believe the following comparative prices are about right. Stave silos are sold varying in price from $250 to $375 for a 16x32 and 16x36. A hollow brick silo should be built for about $350, some claim for less. Concrete silos generally run in the neighborhood of $400 for the same size. Of course, as stated before, local conditions will govern the price somewhat, as sand and gravel for foundations may be more handy and labor cheaper in some communities than others. But I think these prices are not far off.

I think that concrete or hollow brick is the best construction, as it is permanent and fireproof, and when it is up your repairs are very small, as you have no hoops to look after and there is less danger of them blowing down when empty. Some question has been raised as to the ensilage not keeping so well in concrete and brick as in wood, but I think on inquiry you will find that users of concrete and brick silos will offer no more complaint than users of wood silos. Care on the part of those filling the silo to pack it evenly will probably eliminate all spoiled ensilage if the walls have been properly constructed.

I think it a good idea to go down about four feet in the ground for foundation and by plastering the wall and putting a cement floor on the bottom you have added four feet to the height of the silo at a small cost, as a good foundation is necessary. Over four feet is not advisable as it makes it too high to throw out the ensilage to feed it. I think it advisable to add height, rather than diameter, to your silo for more capacity up to forty or fifty feet, as you have more pressure and can feed off more each day, and that is quite an advantage in warm weather when it starts to spoil on top very rapidly. However, the amount of stock a man has will govern the size of the silo he will have to build. We have an 18x43 on the County Farm and have from seventy-five to 100 head of cattle that we are feeding at this time of year. We experience no difficulty with it spoiling on top. But last summer I was feeding my Holstein dairy cattle, perhaps using one-fourth as much as now, and I found that for summer use a fourteen foot would have been much better.

W. A. Elliott.

The potato tuber moth is working such injury to potato crops in various parts of the country, especially in California and Texas, that the bureau of entomology of the United States department of agriculture has issued a special warning and instructions to potato growers to help them overcome this highly injurious pest. According to the specialists this moth is being rapidly spread over the country in shipments of infested potatoes and by careless methods of using and distributing seed potatoes. The warning is issued at this time in order to enable farmers to take special action with the seed they will use for the fall crop.

LANDS AND HOMES

Cedar Lawn Farm at Auction

Wednesday, September 10, 1913

280 ACRES, farm fully improved; 12-room house, good cattle barns, hog barns, silo, good pastures, farm tiled, splendid water system, orchards, fruit and nicely located in the richest corn and blue grass section of Iowa. The equal of Cedar Lawn has never before been sold at auction in the state. Write for particulars and mention Iowa Homestead.
G. W. SEFRIT - - LUCAS, IOWA

FOR SALE

STOCK and dairy farm, silo, etc., furnace and bath room in house, modern and complete, 180 acres, one mile from city of Albert Lea, Minn., 7,500 inhabitants, 12 miles from Iowa line, 5 railroads. Owner has moved away. Bargain. Come and see it.
LOREN G. BLACKMER, Water St., ALBERT LEA, MINN.

FOR SALE

360 ACRES or part of it, good rich and well-drained swamp land, fifty miles east of LaCrosse in Juneau county, Wisconsin, five miles from three different railroad stations. Price only $30.00 per acre. Rudolf Grutter, Mather, Wisconsin
Otto R. Gerst, Oakville, Ia., owners and farmers.

Irrigation

in the West has been and is highly successful. You are wholly independent of rainfall. It has made invaluable the farm lands in Idaho, Oregon, Washington, and other Western States, making possible numerous money-making crops—Alfalfa, Fruits, Grains, etc. We have investigated many irrigated propositions and have information regarding farm lands and ranches in the West. These are opportunities that should not be overlooked.

Write for valuable and authentic information which is free of charge.

WANTED At once on a five hundred acre stock and grain farm a married man who is a first-class farmer, hog raiser and cattle feeder. Send references in first letter to Box 302, Marshalltown, Iowa.

All Aboard for the Iowa State Fair

Des Moines, Iowa, August 20th-28th

Iowa's Great Annual Fair and Exposition Opens August 20th

This, the Fifty-ninth Annual State Fair, promises to be the best ever held. The wonderful achievements in agriculture, in stock breeding, and in all industrial lines in recent years, make possible this great exposition. As has been so thoroughly proven, Iowa is in the heart of the richest agricultural region in the world, and her great fair cannot be excelled. The management has arranged a wonderful exposition and wishes all Iowa to come and enjoy the fair.

No One Can Afford to Miss This Opportunity to Study Iowa and Her Resources

EVERY FAIR IS DIFFERENT

The man who fails to mark the advancement of agriculture, of industry and of invention as reflected at the Iowa State Fair, falls behind in the race for achievement.

SPECIAL FAIR DAYS

Friday, Aug. 22—Children's Day, Full Program, Races, Concerts.
Saturday, Aug. 23—Des Moines' Day, Big Race Program, Night Show.
Sunday, Aug. 24—Music Day, Liberati and Philharmonic Choir.
Monday, Aug. 25—Implement Dealers' Day, Special Fireworks.
Tuesday, Aug. 26—Old Soldiers' and Pioneers' Day, Reunions.
Wednesday, Aug. 27—State Day, Big Fair Program, Great Racing.
Thursday, Aug. 28—Live Stock Show, Grand Million-dollar Parade.

SUCCESS IN IOWA

How others win, what the State has to offer those who do and dare can be learned at the Fair as in no other way.

Entries, 16,000; Premiums, $76,000; Race Purses, $15,700; Over 800 Car Loads of Exhibits

Come and Camp Out---an ideal way to enjoy a vacation. Study the Exhibits, Watch the Races, Hear the Music, See Old Mexico---the Big Night Show, and the Horse Show at the Live Stock Pavilion. Enjoy the Specialty Acts. A varied and complete program with instruction and amusement for all.

IOWA STATE FAIR AND EXPOSITION, DES MOINES, IOWA, AUGUST 20th TO 28th

NEWS OF THE SALE RING

Fesenmeyer Makes Great Sale.

The greatest sale held so far this season of any breed was that of Henry Fesenmeyer, Clarinda, Iowa, on August 12th, when he sold forty-seven head of his large-type Poland Chinas at an average of $126. Twenty-four boars made an average of $95.60 and ten head of sows bred to A Wonder made an average of $204.75. The top of the sale was the great Big Joe yearling bred to old A Wonder and she was purchased by John Voris & Son, Woodburn, Iowa, at $400. The top of the spring boar was No. 18, an A Wonder pig and he was secured by George Sefrit, Lucas, Iowa, at $305. It was a great offering and a real and fitting testimonial to old A Wonder, which was one of the greatest sires that ever lived and incidentally to Big Joe, which get were in great demand, and whose daughters topped the sale. Col. H. S. Duncan cried the sale assisted in the ring by W. B. Duncan. Below we list the entire offering:

1.	J. L. Mosely, New Baston, Ill.	$250.00
2.	Amos Coffman, Mt. Sterling, Ill.	140.00
3.	Jack Kinney, Three Oaks, Mich.	102.50
4.	Monroe McCoy & Son, Hepburn, Iowa	182.50
5.	Harry Clayburg, Cuba, Ill.	82.50
6.	John Wagner, Washington, Iowa	52.50
7.	Otto Plageman, Eureka, Mo.	50.00
9.	Homer A. Dailey, Homesville, Iowa	65.00
10.	E. C. Carson, Woodburn, Iowa	75.00
11.	C. F. Gummert, Renville, Minn.	65.00
12.	William Bros., Villisca, Iowa	165.00
13.	N. Van Lint & Son, Pella, Iowa	95.00
15.	John Voris & Sons, Woodburn, Iowa	40.00
16.	S. C. Wycoff, Kellerton, Iowa	85.00
17.	J. H. Bowen, Ipavia, Ill.	65.00
17½.	W. M. Hubbard, Wabash, Ill.	50.00
18.	Geo. Sefrit, Lucas, Iowa	305.00
19.	Jack Kinney	110.00
20.	B. R. Bohsted, Victor, Iowa	50.00
21.	John M. McGody, McIntire, Iowa	40.00
23.	C. I. Sunbury, Prophetstown, Ill.	97.50
24.	Sigel Brown, Reed, Mo.	70.00
25.	M. Sage, Superior, Neb.	47.50
26.	J. Smith, Independence, Mo.	50.00
27.	A. F. Galloway, Clarinda, Iowa	52.50
28.	J. W. Pfander & Sons, Clarinda, Iowa	80.00
29.	Wm. Ferguson, Scribner, Neb.	70.00
30.	John Voris & Son	400.00
31.	Allen Barton, Cooperstown, Ill.	210.00
32.	John Voris & Son	200.00
33.	Henning & Pharis, Belvidere, Iowa	130.00
34.	J. G. Wilmax, Oxford Jct., Iowa	125.00
35.	Sigel Brown	130.00
36.	H. E. Kreek & Son, Oregon, Mo.	125.00
37.	J. G. Wilmax	127.50
38.	D. R. Keefer, Mt. Carrol, Ill.	142.50
39.	D. R. Keefer	200.00
40.	J. W. Pfander & Sons	175.00
41.	A. O. Boyd, Madison, Mo.	202.50
42.	Ungles Hoggette Co., Lincoln, Neb.	92.50
43.	A. O. Boyd	187.50
44.	D. R. Keeper	200.00
45.	Ed Brinkhoff, Galva, Ill.	200.00
46.	J. W. Pfander & Sons	160.00
47.	Lee Dearth, Lenark, Ill.	82.50
48.	O. L. Job, Clarinda, Neb.	57.50
49.	C. M. C. Wilcox, Kirksville, Mo.	112.50

The Pfander Poland China Sale.

Another splendid sale of big-type Polands was recorded for the well-known firm of Pfander & Son, Clarinda, Iowa, on August 13th, when they sold thirty-nine head at an average of $103. The top of the sale was No. 1 of catalog a spring boar sired by Big Ben and out of Mammoth Giantess Equal and he went to the good herd of L. R. McClarnon, Braddyville, Iowa, at $375. His litter brother went to W. C. Deshler, New Weston, Ohio, at $335. It was a great offering of big-type Polands and it was an excellent sale. The boars in the sale made an average of $17,375. The attendance was very good and many held over for the Fesenmeyer sale the day before. Col. H. S. Duncan cried the sale. Below is a list of the entire offering:

1.	W. C. Deshler, New Weston, Ohio	$335.00
2.	L. R. McClarnon, Braddyville, Iowa	375.00
3.	H. Fesenmeyer, Clarinda, Iowa	105.00
4.	B. R. Bohstedt, Victor, Iowa	67.50
5.	Geo. R. Hurbert & Son, Cuba, Ill.	190.00
6.	Archie Davis, Freeport, Ill.	157.50
7.	Robinson Bros., Morton, Ill.	150.00
8.	John H. Dickey, Connersville, Ind.	107.50
9.	A. Schoof, Lostanon, Iowa	85.00
10.	C. W. Phillips, New Sharon, Iowa	95.00
11.	Max Beanblossom, Washington, Ill.	52.50
13.	Robinson Bros.	75.00
14.	A. Smith & Sons, Superior, Neb.	150.00
15.	J. G. Wilmax, Oxford Jct., Iowa	130.00
16.	John Steffin, Andrews, Ind.	85.00
17.	John Voris & Son, Woodburn, Iowa	150.00
18.	H. C. McGath, Foster, Neb.	150.00
19.	Jones & Pike, Centerville, Ind.	105.00
20.	F. M. Staford, Alpine, Ind.	82.50
21.	Robinson Bros.	162.50
23.	Leeper Bros., Graham, Mo.	52.50
24.	Leeper Bros.	50.00
25.	Guy Sickles, Athelstan, Iowa	75.00
26.	W. C. Deshler	90.00
28.	D. R. Keefer, Mt. Carrol, Ill.	100.00
29.	Theo. Martin, Bellevue, Iowa	62.50
30.	R. J. Northwechr, Clarinda, Iowa	42.50
31.	D. R. Keefer	75.00
33.	H. F. Harwell, Memphis, Tenn.	137.50
36.	Theo. Martin	50.00
38.	J. L. Ethington, Clearfield, Iowa	47.50
39.	A. C. Pfander, Lebanon, Kan.	50.00
40.	J. R. Howell	37.50

44.	A. Schoof	67.50
45.	E. G. Johnson	32.50

IOWA WEATHER AND CROP BULLETIN.

The following climate and crop bulletin is issued by the Iowa Weather and Crop service from the central station at Des Moines, for the week ending August 17, 1913:

The week was excessively hot and generally dry, but the heavy rains on the night of the 10th, and the local showers that occurred on several other days gave sufficient moisture for present needs. The showers on the night of the 10th were better distributed than was indicated by the few telegraphic reports given in the last bulletin, but they were, in many localities, accompanied by high wind and severe squalls which did considerable damage to corn. The worst damage was done over a strip about ten to fifteen miles wide extending from Guthrie to Jasper counties. Within that area corn was badly lodged and some of it was blown down, but much of it is up again, and the final output will not be reduced as much as estimated soon after the storm. Damage was also done by the wind in other sections of smaller area, but the injury to the crop as a whole will be light in comparison to the vast amount of benefit resulting from the abundant moisture. The corn crop as a whole was greatly benefited, but the rain came too late to improve the early corn in the southern counties where the drouth has been severe and of long duration. Late potatoes, garden truck, pastures, meadows, and fruits were also greatly benefited by the rains. Fall plowing has begun.

Geo. M. Chappel, Sec. Dir.

"INGECO" KEROSENE ENGINE

Farm Type 2½ to 15 H. P.

Farmers have been demanding an internal combustion engine to operate on cheaper fuel—here it is.

"INGECO" Kerosene Engines operate perfectly on plain kerosene—the kind you use in your lamps and lanterns. They are real kerosene engines of the "Throttling Governor" type—not a makeshift gasoline engine with attachments and complicated parts for operating on cheaper fuels.

"INGECO" Engines run successfully and economically on kerosene, distillates and other light oils—they are quickly started, safe and have no exposed flame.

Write for catalog—we make just the engine for your use. State what size you are considering.

How to grow Alfalfa, how to feed it, how to harvest and care for it. Full information for corn belt farmers who wish to grow this most profitable hay crop will be sent free on application. Also a sample of our extra choice high grade seed.
IOWA SEED CO. Dept. D1, Des Moines, Iowa

THE LIVE STOCK MARKETS.

Union Stock Yards, Chicago, August 16.—Further declines have been effected in the fat cattle market during the week now closing, thoug supply figures considered the trade has not preformed at all badly. Chicago receipts show an increase over 11,000 from the last week, and the Kansas City run has also been numerically heavy, owing to the extermity in which Kansas pasture men have found themselves. Six markets report a combined supply for the week of 161,000, or 9,000 more tha nthe week previous and about the same as a year ago. The supply of range cattle ha bseen light, but the northwestern horizon begins to wear a more beefy appearance. Declines of 10 to 15 cents are shown by the bulk of the beef steers. This loss has been escaped by good yearlings and the best weight steers and qualitied light fleshed cattle that get feeder competition not been involved in the decline. The heason's $9.20 top for prime bullocks was restored at the week's open- The season's $9.20 top for prime bullocks was restored at the week' opening, but it is taking very ripe cattle to demand $9 at the close and finished yearlings will bring the money quicker than thick, fat 1500 lb. steers. Bulk of the beef steer supply has sold within a spread of from $7.90 to $8.75. The week's run been freighted with cattle out of dry territory. How much of this kind of liquidation will be necessary next week depends upon the weather, and a lot of moisture over a wide area of Nebraska, western Illinois, Missouri, Kansas and Oklahoma will be heeded to revive pastures. The trade has no knowledge of an available supply of fat cattle for the next sixty days in excess of trade requirement, but even distribution will be needed. The corn belt is not out of fat cattle, and from now on the range delegation will play a more or less conspicuous part in the trade.

Last week's good closing prices for beef and butcher cattle have not been maintained. On the bulk of the supply current prices are down 20 to 30 cents from a week ago, canners have not lost over 10 to 15 cents, and strictly choice heavy beef cows are little lower. Prime yearling heifers, too, are prize packages and selling about as high as any time recently, $8.70 having been paid this week for straight loads of finished heifer yearlings and mixed yearlings having sold as high as $8.75 to $9. Bulk of the plain to good butcher cows are going within a range of from $5.25 to $6.50 and it is such grades, along with the slippery to fairly good grass heifers, selling under $7.25, that show most of the decline this week. Beef bulls of choice fat class continue remarkably scarce and hold about steady, but medium to good butcher classes are 15 to 25 cents lower, and bologna and common light bulls 25 to 50 cents lower than a week ago. Few bolognas are selling now above $6 and not many beef-bulls above $7, though a prime clas is eligible to $7.50 and higher. Veal calves touched on Tuesday the highest levels reached since last March, bulk of the supply reaching from $11 to $11.40 and $11.50 being paid for numerous lots. Week-end prices are 50 cents to 75 cents below this level, $11 sales having a very scratchy appearance and fair to choice vealers going largely from $10 to $10.75.

Responding to a broadening demand from Indiana, Ohio, northern Illinois, Pennsylvania, Michigan and Wisconsin, sections that have all been visited by generous rains, where pasturage conditions are good and an abundance of rough feed for winter use assurred, the market for stock and feeding cattle has advanced 15 to 25 cents over last week's closing and is showing, on desirable classes, the highest levels touched for a period of six weeks or more. It is a very high market relative to curren fat cattle prices and in view of the soaring market, yet there is promise of continued good demand for some week's ahead as there are many empty spots in which to place thin young cattle and confidence galore as to the destiny of the beef and mutton making industry has been demonstrated by the manner in which corn-belt feeders have invested money in their cattle and sheep recently. The August stock and feeding cattle movement out of Kansas City promises to break all previous records for the month. Omaha is not getting half enough cattle to go around, while Sioux City and St. Paul are bare. Killers are taking nearly everything that will bleed at Chicago and the feeder is at his wits' end and to replenish feed lots and pastures when fat cattle go to market. So urgent is corn-belt demand for thin sheep and lambs that thousands are being bought in Montana and Wyoming to go direct to Michigan, Iowa, Illinois and Ohio. This stuff will not be enumerated in the 1913 marketward movement, but will figure in receipts during the early part of 1914.

Closing quotations on all grades of cattle follow:

BEEF STEERS.

Prime steers, 1300-1700 lbs.	$9.00@9.20
Choice steers, 1250-1500 lbs.	8.85@9.10

Good to choice stock cows.	5.35@5.85
Poor to good stock cows	4.75@5.35

It has been a week of demoralization in the hog trade, prices having been on a continuous tobogan slide up to Friday, when a logical reaction set in. On the low spot, uncovered Thursday, the common price fell down to about $8.04, the lowest since February last. Friday's market was sharply, but unevenly higher, with prcse still averaging 34 cents lower than a week ago and the general average $8.21. A top of $8.90 was made on selected light shippers, but few hogs are commanding $8.75, and for the bulk it is a $7.85 to $8.50 market at this week-end, rough heavy selling in decent sized bunches down to $7.35 to $7.55. Pigs are coming numerously and light, many of them having a diseased appearance. The little fellow are poor property on the market and selling anywhere from 50 cents to $1.25 lower than last week, a common affair light class going at $4 to $5.75 and good to choice at $6 to $7.75.

NATIVE STOCK.

FIELD NOTES.

Bargains in well-bred Galloway cattle, both bulls and females, are offered by James P. Milliken, Media, Ill., whose advertisement appears on poge 31.

C. E. Bontrager, Nodaway, Iowa, will hold a public sale of Jersey and Guernsey cows and heifers September 3d, as per announcement on page 13 of this paper.

Good Chester White spring boars are advertised for sale by A. C. Orme, Nodaway, Iowa, on page 29. He is making thirty-day special prices if ordered now. Send him an order at once.

Henry E. Wegter, Sheldon, Iowa, advertises some good fall and spring Duroc Jersey boars for sale on page 31 at from $25 to $40. Get an order to him at once and get one of his best.

H. L. Faulkner, Jamesport, Mo., the breeder of spotted Poland China hogs prices his May and June pigs in his advertisement on page 30 and if you want the famous Highview kind you had better order now.

McLaughlin Bros., Sublette, Ill., have herds of Poland Chinas and Duroc Jerseys. They have 140 spring pigs of both breeds and would be pleased to hear from anyone in the market for Duroc Jersey or Poland China boars.

On page 28 of this issue of The Homestead a coach horse is described and priced by Amos Hanson, Collins, Iowa. It will be worth time and stamp to write Mr. Hanson for further particulars if in the market for a coach horse.

Sixty-five head of registered Holstein-Friesian cows and heifers are advertised for sale by the Rock Brook Stock Farm, Station B., Omaha, Neb., on page 13. Get their prices on these at once or go and see them. Please mention The Homestead when writing them.

Twenty choice Duroc Jersey fall boars are advertised for sale by G. E. Everts, Audubon, Iowa, on page 31 at $25 to $50. He is also booking orders for spring boars at from $25 to $35. Don't you lose any time in ordering one of these boars, as now is the time to get one and get him right.

Fall plowing is best done with a plow that does good work. The advertisement of the Best Ever sulky and gang plows which appears on page 20 of this paper sets forth the merits of the Best Ever in a very thorough and complete manner. It brings out particularly the fact of light draft, ease of operation, durability and acme steel shares. Prices or other facts may be learned by writing to Moline Plow Company, Dept. 11, Moline, Ill.

If you want a good Duroc Jersey boar read the advertisement of Heiko Gruis, George, Iowa, on page 31. He is making the special price of $25 and $30 on these boars as long as they last. Get your order to him at once and secure one of these good boars before the best of them are picked over.

Frank P. Healy, Bedford, Iowa, prints Short-horn catalogs and is prepared to do work not only quickly, but well. There is no one who has a more extended experience in Short-horn pedigrees than Mr. Healy and none whose information is of a more dependable character. Mr. Healy breeds Short-horn cattle and has a few pure-bred Scotch heifers for sale.

A recent letter from T. S. Simpson & Sons, Aurora, Ill., advises us of the shipment of thirty head of ponies to a buyer at Dorchester, Neb., eleven to a party in Hurley, S. D., five to Landsdale, Pa., three to Butte, Mont., and the receipts of orders for twenty head to go to Texas and two car loads of export high-class Shetland ponies. See their advertisement on page 28.

The Sandwich Manufacturing Company has an advertisement on page 10 which enumerates the advantages to be secured through the use of the Sandwich cypress farm elevator. This device is designed for elevating corn into the cribs or small grain into bins. It does it quickly, easily and economically. For special prices write to Sandwich Mfg. Co., 170 E. St., Sandwich, Ill.

Prof. D. A. Kent has succeeded in formulating a remedy for periodic ophthalmia or what is commonly called moon blindness in horses. The formula contains no poisonous substances. It is a scientific mixture of reagents, germicidal in proporeties, but containing none of the corrosine or poisonous compounds ordinarily used in the destruction of bacterial forms. See advertisement on page 24.

Iowana Berkshires have all been given the simultaneous treatment to immunize them against cholera. The richest breeding known is found in abundance in this herd, and over 500 pigs are now on the farm from which to make selections. There is no want in the Berkshire line that cannot be satisfactorily filled at Iowana. The advertisement appears on page 29.

George H. Lee & Company have for many years been engaged in the production and sale of remedies of value to farmers and stock raisers. Just now Germozone, manufactured by the Lee Company is attracting wide attention. It is prepared for the purpose of encouraging thrift and laying qualities in hens. The advertisement gives some important information concerning it and quotes price. Orders may be forwarded to Geo. H. Lee & Co., Omaha, Neb.

Peter Streit, Sublette, Ill., has an excellent herd of Duroc Jerseys at the head of which is P. S. Wonder, a four-year-old son of Crimson Wonder and H. A.'s Queen. This is one of the good boars we have seen in our travels and will weigh 900 pounds at the present time in nice breeding condition. Mr. Streit has some good spring pigs sired by this boar and some by Model Profit, a son of Model Wonder and a litter by Sensation Wonder, Ames Col. and S. E.'s Premier Col.

The illustration in the advertisement of the Universal Portland Cement Company on page 13 plainly illustrates the saving that may be effected through the use of concrete feeding floors. The Universal people have prepared and printed a book which illustrates various concrete-made devices that may be of use on the farm and describes their manner of construction. It is worth sending for by every farmer. It is free. Write for it to Universal Portland Cement Co., 72 W. Adams St., Chicago, Ill.

Henry Moll, Garner, Iowa, advises us that he wishes to dispose of his Poland China herd boar, Long Victor 2d, a last March yearling weighing better than 400 pounds. This animal is sold only for the reason that his owner having but a small herd wishes to reserve his gilts and cannot use him longer. He is right in every way. He is a grandson of Big Victor and carries other blood lines that are equally as popular. Mr. Moll also has for sale one winter boar pig and several winter gilts as well as some March gilts. All of these are growthy, thrifty and will be sold at reasonable prices. The winter pigs are by Big Surprise 3d, a 900-pound hog. Their dam is a daughter of Fisher's Chief Price, he by Chief Price 2d. The March pigs are big, thrifty fellows with plenty of bone, length and quality. They are by Big Surprise 3d and their dams are by Black Victor, he tracing to Corn Belt Expansion. For any additional particulars write to Henry Moll, Garner, Iowa. See page 30.

John Leitch & Sons, proprietor of the Avondale Stud of Clydesdales, Lafayette, Ill., write that they will exhibit their horses this year at Indiana, Illinois and Michigan State Fairs. They say: "Our horses are coming through the summer in fine shape, and the animals in our recent importation are taking on flesh readily. From aged stallions down they are all up to the Leitch standard. In aged stallions Regal Style, Benwell and Strathbaan head our list, the first two descendants of Baron's Pride and the last animal named a grandson of Hiawatha. Regal Style won the aged class and championship at the Indiana and Illinois State Fairs last fall. Our three-year-old Lord Marshall weighs 1,800 and has the action of a Hackney. We have some outstanding two and three-year-old horses that must be seen to be appreciated, while our mares are top ones in every way. We recently sold a choice three-year-old stallion to the Algona Horse Co., Algona, Iowa, and a grandson of the great Darnley went to F. Nieman, Freeport, Ill."

At the recent Canadian Industrial Exhibition the Clydesdale stallion, Charnock, by Criterion, was first in class and grand champion stallion of all draft breeds. This great horse is owned by Alex. Galbraith & Son, De Kalb, Ill.

The Cyclone corn husker and shredder is advertised on page 8 of this paper. This machine was constructed with the particular aim of satisfying the demands of the farmer and its simplicity is such as to enable any ordinary farmer to operate it successfully. It requires but from six to eight horse power, although it is made in larger sizes. The Cyclone has been in successful operation for eighteen years. The manufacturers also make the Rosenthal feed cutters and silo fillers. For catalog address Rosenthal Corn Husker Co., Box 30, Milwaukee, Wis.

H. Lenz, Lansing, Iowa, advertises Poland China hogs on page 27. Mr. Lenz has for sale more than 100 head of pigs, male and female, and ranging in age from those of fall farrow to last April pigs. There are fall and spring boars by Big Hadley, an old standby that has been in service in the Lenz herd for five years and that has a remarkable record as a getter of pigs that are popular with buyers. There are also spring pigs by Big Bug and Winn All, both of which are good yearlings. Mr. Lenz informs us that his pigs have size and quality and that they will be sold at reasonable prices.

Red Polled Heifers for Sale.

If any of our readers want to purchase some good Red Polled heifers, Frank J. Clouss, Clare, Iowa, has them for sale. These are bred and safe in calf to his champion bull, Ruperta's Goods, so you will therefore know they are bred in the purple and are all right. If you want Red Polls write Mr. Clouss and kindly mention The Homestead.

See King Gano at the Fair.

Duroc Jersey breeders will be interested in the great boar, King Gano, that O. E. Osborn will show at the Iowa State Fair next week. That he is a good one you will say when you see him. He is a son of Col. Gano, and is one of the best that great boar has ever sired. Make it a point to hunt up O. E. Osborn when you go to Des Moines next week and see this great young boar.

Chester White Fall Sows.

W. W. Vaughn, proprietor of Wildwood Farm, Marion, Iowa, is one of the old Chester White breeders of Iowa. This herd has been producing the good ones for a third of a century. At the present time they will sell a few extra good typy fall sows and an excellent bunch of spring boars. Some of the spring boars are not related to the fall sows. This would be a good opportunity for someone to start a herd of Chester Whites.

Stream and Wilson's Stallions.

Those of our readers who are going to be on the market for imported Percheron and Belgian stallions and mares will be interested in the 100 head that Wilson and Stream, Creston, Iowa, are now offering for sale. They have a high-class lot of home-bred stallions and mares, also they are making some sensational prices on these. They will have a new importation of Percheron and Belgian stallions and mares about September 1st, and they will be glad to have readers of this paper call and see them. Write them at once about their horses and kindly mention this paper.

Sefrit's Poland Chinas.

On October 28th, Geo. W. Sefrit, Lucas, Iowa, will make his annual sale of forty head of boars and ten head of sows and he will have a splendid offering to show the boys. These will be sired by Longfellow Jr., the boar he was offered $1,000 for; Big Bone Again, a son of old Big Bone; Smooth Wonder 3d, a son of Smooth Wonder 2d. He will also have others by such well-known sires as Miller's Choice, Columbus, Colossus, Big Orange, Long King's Superior and Big Orphan 2d. He expects to put up one of the great offerings of the year. Keep his sale in mind and if you are going to want a good boar it will be an excellent place to buy one.

Poland China Herd Boars.

C. F. Adams, Owasa, Iowa, offers for sale Grand Chief, a herd boar that weighs 750 pounds and is the sire of some of the best pigs on Mr. Adams' farm. This boar is a sure breeder and the first check for $100 buys him. Mr. Adams would consider trading Grand Chief for some good sows or gilts. He also offers for sale a fall yearling boar bred by Peter Mouw and sired by Big Jumbo. In his advertisement on page 30 he is also offering a fine lot of spring pigs that are well worth the price asked for them. In fact, they will be worth several times as much in a few months. Write Mr. Adams your wants, kindly mentioning The Homestead.

Hollingshead's Poland Chinas.

We desire to call Homestead readers attention to the Poland China sale of R. C. Hollingshead, Russell, Iowa, (the sale will be held at Chariton, Iowa,) on November 11th. Mr. Hollingshead secured the great herd of Joe Goltry when the latter was elected county clerk last fall, and he is going right on with the business. They will all take off their hats to his offering when they see it sale time. He has not been making much noise, but he has been growing hogs and we want to say to you that he will have one of the greatest bunches of boars and sows that will be sold this fall. This is no idle talk either. He will sell thirteen head of splendid fall boars and twenty-two fall sows in this sale, together with thirteen head of spring boars and nobody will show you a better bunch this

fall. We will have more to say about his offering later in the season.

Cedar Lawn Farm at Auction.

On Wednesday, September 10th, Geo. W. Sefrit, Lucas, Iowa, will sell at public auction his well-known Cedar Lawn Farm, and it is one of the good stock farms in the state. There are 280 acres in all, farm fully improved, twelve-room house, extra good cattle barns, hog houses, silo and ample pasture. The farm is tiled, splendid water system, orchards, fruit and nicely located in the richest corn and blue-grass section of Iowa. Complete description will be furnished to Homestead readers provided they mention this paper when writing Mr. Sefrit.

Vaughn Offers Short-horn Heifers.

W. W. Vaughn, proprietor of Wildwood Farm, Marion, Iowa, can supply good two-year-old Short-horn heifers safe in calf to Scotch bulls, a few cows with calves at foot and some yearling heifers. This herd is one of the very oldest and most reliable to be found in the state of Iowa. The announcement that some good females will be sold from this herd should elicit interest from anyone in the market for some good females. They also offer six good young bulls from ten to fifteen months of age. Our readers will find Mr. Vaughn a straightforward, honest man with whom to do business, and buyers will receive excellent values. See page 29.

Wiebe's Scotch Collies.

G. A. Wiebe, Beatrice, Neb., one of the best known Collie breeders of Nebraska is offering just now a big lot of extra choice stuff of either sex. These dogs are all sired by one of the best working dogs within the state. He was easily trained and at eight months was one of the best performing dogs anywhere. He could be sent long distances, obeyed all signals and in fact was considered a marvel of intelligence. He is still in the Wiebe kennels and it would take a long price to purchase him. We believe that readers of this paper would do well to order one of these puppies and we also wish to emphasize the fact that it is worth money to buy a young dog from such a remarkable sire. Kindly mention this paper and write Mr. Wiebe at once.

Col. W. F. Stratton, Auctioneer.

Col. W. F. Stratton, Nevada, Iowa, is an auctioneer with twenty-four years' experience. He has officiated as auctioneer at pure-bred live stock sales in several states and has a wide acquaintance among breeders of pure-bred live stock. Col. Stratton has a practical knowledge of Short-horn cattle and Duroc Jersey hogs for the reason that he has been breeding them for a number of years and is familiar with pedigrees and individuality. He is an energetic worker and always makes every possible effort to get the full value of an offering. He was connected with some of the very best sales held in the state last year and Col. Stratton considers himself in position to get as much money for the seller of pure-bred live stock as any man in the business. His twenty-four years' experience enables him to know when to sell an animal and when he has the value. He would be pleased to correspond with anybody contemplating the holding of a sale of pure-bred live stock, a real estate sale, or a farm sale. When writing him kindly mention The Homestead. See page 28.

Kiser Bros., Short-horn Breeders.

Kiser Bros., Oregon, Wis., are among the best known and longest established breeders of Short-horns in the state. Their father established the herd in 1870, forty-three years ago and they have never bred anything but pure-bred Short-horns since then. In their herd of nearly seventy-five head is Bates and Cruickshank blood, but with an eye always to the milking qualities of the animals they have developed a type of beef animals with very satisfactory milking ability. Records of forty to above fifty pounds daily have been quite common. Their dealings with breeders, which cover the United States and Canada, have been very satisfactory. They have sold bulls to a father, his brother and son for twenty years, to another man sixteen years and the latter man never visited the herd until 1912, having bought by mail or by proxy. They sold a dozen bulls in one neighborhood by mail, and all buyers were highly satisfied. They have shown at a great many state fairs and have taken grand sweepstakes many times. The herd is headed by Oakland Lad, who was sired by Royal George. Kindly mention The Homestead when writing for information.

Trumans' August Importation.

John G. Truman, Bushnell, Ill., writes: "A cablegram received from London stated that our Horace W. Truman sailed from Tilbury docks on the steamship Minnewaska on Saturday, August 9th, with our sixth 1913 importation consisting of the very best Shire, Percheron, Belgian and Suffolk stallions and Shire and Percheron mares possible to procure in Europe. Time and money have not been spared in getting together this very select shipment which is due to arrive at Bushnell on the 22d inst. The Shires include some of the noted winners at the summer's shows and among the Percherons is Karlin, considered by a great majority of American importers who saw him in France the greatest horse of the breed imported this season. Also the first-prize two-year-old filly in a class of eighty-five at the Mamers Show this year. The Suffolks are two and three years old and each one a Royal prize winner. This shipment will increase our stud here to considerably over 100 head of imported horses and I believe the best lot ever stabled on the Pioneer Stud Farm. We are making very attractive prices in order to take care of our regular September importation. We shall be pleased to hear from any of our readers who are interested in high-class draft horses, to whom we shall be pleased to mail our thirty-fifth annual catalog."

The Little Giant Portable Elevator.

The illustration in the advertisement on page 15 shows how corn may be cribbed without scooping and with an insignificant amount of labor on the part of the farmer. The horse does it all, does it quickly and effectively. The Little Giant is worth investigation because it eliminates a lot of hard work and saves another lot of time. A free book that contains much good reading throughout and tells all about the elevator may be obtained by filling out the coupon in the advertisement and forwarding it to Portable Elevator Co., 155 McClun St., Bloomington, Ill.

Interstate Live Stock Show.

The Interstate Live Stock Show which takes place at Sioux City, Iowa, the week beginning September 13th, has grown into a character which puts it in the state fair and exposition class. The live stock department in particular has grown each year steadily so that it now includes the biggest and best herds of cattle, horses, sheep and hogs. Other lines are equally as strong. Exhibitors are advised that new stock barns and a show pavilion have been provided for their accommodation. The secretary informs us that live stock entries will close September 1st. The usual entertainments of various sorts and extraordinary speed events will be provided. For premium lists or other information address Joe Morton, secretary, Sioux City, Iowa.

Camp Hydraulic Grain Dump.

The Camp hydraulic grain dump will be on exhibition at all the leading state fairs and farmers who realize the need of doing their work economically, quickly and with the very smallest amount of help will find it profitable to investigate the merits of this dump. The illustration in the advertisement to be found on pages 16 and 17, shows how it operates and how it looks when folded up ready for the road. The ease with which it can be moved from one place to another is a great argument in its behalf. Its general operation may be learned from those in charge at the various fairs. It is for sale in Iowa by Ketchum & Gaston Co., Marshalltown, Iowa. Further information with reference to cost or other facts may be learned by addressing Camp Bros. & Co., manufacturers, Dept. 105, Washington, Ill.

Poland China Fall Boars.

If you want a well-bred Poland China fall boar read the advertisement of J. H. Healy, Manilla, Iowa, on page 30 of the issue of August 14th. He offers twelve fall boars for sale, sired by his splendid herd boar, Lingford's Choice, the second-prize boar at the Nebraska State Fair and one of the best boars in western Iowa. Six of these are out of a sow called Edna and she was the dam of the six top gilts in his last winter's sale. The dam of these is a daughter of Young Look and she is one of the best sows he ever owned. Two other good ones are out of a sow called Lengthy and she is a daughter of old Mogul's Hadley. We have seen these boars and can recommend them to Homestead readers. He has forty choice spring boars that he is pricing at from $25 to $50. Write Mr. Healy about these at once or go and see them. You will buy one of these boars if you get your eye on them. When corresponding with him kindly mention The Homestead.

Barr's Chester White Herd.

A representative of this paper last week called on W. T. Barr, Ames, Iowa, whose herd of Chester White hogs has assumed the prominence of one of the leading ones of the state. Mr. Barr has an excellent crop of spring pigs, mostly of March and April farrow. A large proportion of them are by Highland Chief, a hog of most excellent proportions, smoothness, form, bone and uniform individual character. He is a son of Anderson's Chief Select and carries merits that would certainly attract attention were he fitted to appear in a state fair show ring. He has also proven a breeder of unusual prepotency, his pigs showing the same uniformity of breeding character that he himself possesses. There are also pigs in the herd by B. & P.'s Pathfinder, Chickasaw Choice and Fancy Boy. The dams are largely of Chickasaw Choice breeding, carrying the same strains of blood as did the sale consignment which made such a remarkable record at Barr & Rae's sale early this spring. Later in the eseason additional facts with reference to these hogs will be presented in our columns.

Menaugh Bros. Durocs and Polled Durhams.

Menaugh Bros., Gardner, Ill., are very enthusiastic advocates of pure-bred live stock on the farm. These young men are making a success in the breeding of pure-bred Duroc Jersey hogs and polled Durham cattle. They have a fine lot of spring pigs and some good fall boars that they are offering for sale. The fall boars are sired by Model Boy, a son of Model Top and O. & I., a son of W. F.'s Col. The spring pigs are sired by Superior Jr., a son of the prize-winning Superba and out of a Defender sow. A few are sired by Good Enough Yet by Good Enough Again. They have an excellent herd of brood sows sired by Defender O. & I., Jack's Friend, Col. B., The Professor, B. & C.'s Col. and Model King. The line of breeding that these gentlemen have in their Duroc Jerseys is as good as any and the prices asked for their stock are reasonable considering the quality. They have about fifty head of high-class Polled Durham cattle and offer for a sale a few young bulls and some extra fine, smooth heifers, a number of which are of the very best Scotch breeding. They will be pleased to correspond with any of our readers interested. See page 27 and write them mentioning The Homestead.

Big Orange and Colossus Boars.

On page 27 L. R. McClarnon, Braddyville, Iowa, is offering some splendid Poland China fall boars for sale sired by the 1,000-pound boar, Big Orange and Colossus, and these are good enough to head any of our best herds. Two of these sired by Big Orange are out of dams by Colossus and one is out of a daughter of old A Wonder. Two of the Colossus boars are out of a Giantess dam. Possibly the best of the Big Orange boars is out of Colossal Girl and this boar is an outstanding good one. Any of our best breeders could use this boar at the head of their herd and they would all know he is a good one. He is a September 3d farrow, is a hog of splendid size and ample bone and will be in the 1,000-pound class when matured. He is strictly right for some breeder who wants a right good herd boar to head his herd. Some of the other boars he is offering are almost as good as this fellow. He also has thirty spring boars for sale sired by Big Orange and Colossua. Write him at once and get his prices on these boars. Kindly mention this paper when corresponding with Mr. McClarnon.

Snethen's Durocs.

J. S. Snethen's, Davis City, Iowa, a breeder of Duroc hogs who has been breeding for several years from strains that have proven their value in making the breed better has this year a superior lot of spring pigs that have for sires Belle's Choice Goods, Golden Model 51st and Crimson Wonder 31st, three boars that sire pigs with quality, exceptional color and that grow out big and smooth. These pigs are out of as well-bred sows as are found and all have proven good producers of large litters. An especially good litter by Crimson Wonder 31st and out of a daughter of Belle's Choice Goods will furnish boar material that breeders desiring something good should go and see. Mr. Snethen has used boars that were strongly bred along Crimson Wonder lines and this type prevails throughout his herd. He has selected from the crop of seventy-five spring pigs twenty boars that he offers the trade. They are tops, have been well grown and are the kind that will please those looking for something good. Note page 27 of this issue for Mr. Snethen's advertisement and if you want good Duroc boars go and see these.

C. S. Bratt's Hampshire Swine and Rambouillet Sheep.

At the Nebraska State Fair which will be held the first week in September, C. S. Bratt, Arapahoe, Neb., will exhibit a number of Rambouillet sheep and a choice lot of Hampshire swine. In these classes of live stock, as well as in Shetland ponies and Short-horn cattle, Mr. Bratt has choice herds. Few, if any, better flocks of Rambouillet sheep are in the country today than those owned by Mr. Br tt. His herd has been a persistent winner at the Nebraska State Fair and those that have purchased from this flock have done well. The Hampshires are also a well-marked lot of excellent blood lines. They are one of the good herds of a great hog-producing state, and readers of this paper that are in the market for anything in the lines mentioned will do well to see the exhibits that will be made by Mr. Bratt. The writer does not know just the numbers of his pens, but a little inquiry will easily locate this exhibit. Kindly make a note of the name, and be sure that you visit his herd, and tell him that you saw his advertisement in this paper. See page 29.

Theobold's Durocs.

J. C. Theobold, Ohiowa, Neb., started a herd of pure-bred Durocs three or four years ago, and he made a good start. He secured some of the very best stuff that was for sale, topping two or three of the best Iowa sales and getting in each instance noted breeding stock. Sows purchased at that time made good, and with the produce of these noted sows and from famous boars, a herd has been built that is second to none in the country in point of pedigree and for individual merit they are first class. One of the most noted daughters of Ohio Chief, Ohio Belle by name, was purchased from the Allen herd and she was mated at the time with Crimson Wonder Again. From this sow Mr. Theobold has raised his herd boar, Ohio Belle's Crimson, and also a fine lot of sow stuff and a number of boars have gone out to head good herds that were her produce. Ohio Lady, also a daughter of Ohio Chief, was purchased in Iowa and she was bred to King Col. This sow has left a fine lot of stuff on the farm and is still doing business as is Ohio Belle. In the Putman sale a couple of years ago he bought a Valley Chief sow bred to Col. Chief. This sow raised Valley Chief Col., a boar now in use in the Theobold herd and one of the extra good breeders within the state. Gold Dust Chief by Ohio Chief, is also in service in the herd having been purchased in the Steinbach dispersion and there is little question but that he is the best Ohio Chief boar in the country today. He is really one of the very best ever sired by the old boar, and while not having been given the publicity that he deserved in the Steinbach herd, nevertheless he is well liked by all the leading Duroc men of the West. A junior yearling sow will probably be shown at the fair this season from this herd and had she been properly fitted would certainly have got well up to the top. She will hardly make it in the flesh she is in, but she is surely a very fine sow. She lacks nothing that makes the first-prize winner except flesh. Mr. Theobold will offer spring boars, also one fall boar and a yearling at private treaty. Nothing better bred, and a number of mighty good things are here. Write Mr. Theobold at once and mention The Homestead.

J. A. Schaldecker's Poland Chinas.

The writer recently called on J. A. Schaldecker, Grafton, Neb., and we wish to report that this herd is still on the map, although the owner was pretty badly discouraged a few weeks ago. The best crop of pigs ever farrowed on the farm were farrowed this spring and the hopes of the owner were pretty strong, as he had been very successful for the past several years, but later disease commenced to take its toll and Mr. Schaldecker, despaired, saving any of them. However, with vaccinating he has managed to save about half the crop of spring stuff and nearly all of the breeding stock. Twenty-five fine fall gilts were disposed of and they were the stuff that was being grown for the next February sale. No sale will be held this season, but some good boars that have passed the serum treatment and that are generally regarded as immune will be offered at private treaty. These hogs have been treated with the simultaneous treatment. Lower prices than formerly will move this stock, as Mr. Schaldecker has not enough to make a sale. Mention The Homestead and write for the prices on a King Mastodon Jr., B.'s Great Hadley or a Big Sensation pig.

Hechtner's Galloways at the Fairs.

Don't fail to see the great Galloway herd of C. S. Hechtner, Chariton, Iowa, at the fairs this fall. He begins with the Iowa State Fair and then makes the rounds of all the leading state fairs and then winds up at the International. He has a great string of cattle with him again this year and if you are interested in Galloways you will want to see his great herd. He has a number of splendid bulls for sale among which is a first-prize two year old at the Royal. Six of the bulls he is offering are imported and while many of these were never shown they are nevertheless good enough to go out and win. He recently sold a splendid bull named Kingsley to D. M. Croft & Sons, Bluff City, Kan., and he was a bull of wonderful scale and smoothness. The splendid show bull, Cornharow, which was first prize in a class of sixty-one in the Castle Douglas bull show, was sold to Robert Brown and Secretary Martin took another excellent bull in Fleur de Lis. He is a three year old and is smooth and of a perfect Galloway type. Together with his imported home-bred bulls he has about twenty-two of these that he will sell. See Mr. Hechtner at the fairs or write him at his home address and kindly mention this paper.

The Sale of Imported Herefords.

The fifty head of imported Herefords that are to be sold at the farm of George Leigh, Aurora, Ill., Friday, August 29th, should be an attraction sufficient to draw breeders and admirers of the white faces from all sections of the country. The buying public is particularly fortunate that two such veteran Hereford men as Mr. Leigh and Mr. George are behind this lot of cattle, as it means that the buyer will have the very best animals presented to his notice that experience and ample capital could procure. Mr. Leigh has imported far more Hereford cattle than any other man in the United States, and is possessed of years of rip experience as a breeder, importer and expert judge, while Mr. George, who for many years has been connected with large enterprises in the live stock world, and who is a former president of the American Hereford Breeders' Association, has been an active breeder of Hereford cattle for many years. When they instructed Secretary Britten, of the English society, to select for them fifty head of Herefords it was with the idea of securing one of the best lots that had ever been brought to this country, and that they succeeded in this respect will be admitted by all ho have seen the cattle. Not only that, but the breeding all the way through the entire offering is of the best. These cattle and their ancestors were bred by such men as Tudge, Price, Powe II, Edwards, Roberts, Hill, Farr and others whose names are identified with all that is best in Hereford history. In some respects this is a very remarkable offering, especially as regards the bulls. In Farmer, the two-year-old show bull, Messrs. Leigh and George have one of the greatest propositions and prospects that the breed has ever produced. He was a reserve champion in England, and the expert judges who have inspected him since his arrival in this country are firm in their belief that he stands in a class by himself. He is deep bodied and massive, standing on the best of short legs, has a wonderful top, handsome head, smooth shoulder, great spring of rib and should give a great account of himself both as a sire and in the show ring. One of the best of the yearling bulls is Mansel Boy, calved in March, 1912, a short-legged thick fellow, with good head and horn. There are a lot of other good yearling bulls in this offering, the kind that have scale, smoothness and substance, the sort that are carrying the necessary bone and size to give a satisfactory cross. The cows are all young, and the majority of them have lusty calves at foot. Messrs. Leigh and George are certainly giving the public far more than an even divide in this matter. It was not at first their intention to sell these cattle. Rather, they imported them intending to place them in their respective herds, but so many people asked them to put prices upon different animals that they finally decided to place the entire offering in the sale ring, enterprise which should certainly be appreciated. The cattle need no indorsement at our hands. They will speak for themselves on sale day. They are right in every way, and they are being sold by two gentlemen who

50 Imported Herefords at Public Sale

FRIDAY, AUGUST 29

Mansell Boy, one of the great young bulls in the sale.

AT THE GEORGE LEIGH FARM **Aurora, Ill.**

The Tops of England's Greatest Herds

are cataloged for the sale, the first of its kind in over a decade. The Hereford breeders cannot afford to miss this opportunity to secure fresh blood. 50 head are listed, including 16 bulls, among them the English champion, Farmer, a sensational two year old. There are outstanding yearling bulls and bull calves of great promise, while 20 breeding cows, 2 to 5 years old, will be offered, several with calves at foot, and all bred to top bulls in England. Don't overlook the sale, the event of the year in Hereford centers. Write today for the catalog, mentioning The Homestead, to

Cols. Carey M. Jones and Fred Reppert, Auctioneers.

Geo. Leigh or Wm. George, AURORA, ILLINOIS

can be depended upon to give everybody thoroughly satisfactory treatment. If you have not already secured a copy of the catalog for this notable sale write for one at once to either George Leigh or Wm. George, Aurora, Ill., mentioning The Homestead. See advertisement on this page.

Crabtree's Polands.

H. Crabtree, Baxter, Iowa, is offering for sale a fine lot of spring pigs as well as a few fall yearling sows, some of which are bred and some open. The spring pigs are sired by Quality King, a grandson of Long King and out of Wonder Girl 3d by Jumbo, and O. K. Price, a son of Chief Price Again and out of Priceless Gem by Big Price. The yearling sows are sired by Long Chief by Long Dude and out of a sow by Chief Knight. Some of the spring pigs offered are out of Big Maria, a daughter of Cottage Lad. Big Maria is one of the best breeding sows in the herd and always produces an extra good litter. She is sired by Tecumseh Longfellow. Surprise Choice by Surprise Tecumseh, Daisy 2d by Long Chief and daughters of Mastodon Leader and Cottage Lad make up the herd of brood sows. Mr. Crabtree has lots of range for his hogs, with plenty of good water and shade. In regard to the yearling sows and spring gilts Mr. Crabtree would be pleased to sell them in bunches of five or six to some breeder who would sell them in a bred sow sale. The spring pigs have deep bodies, good length, heavy bone and excellent heads. Mr. Crabtree's pigs are in just nice growing condition and will give satisfactory results. See page 30 and write him for prices, mentioning The Homestead.

Thos. F. Miller's Poland Chinas.

With this issue of The Homestead, Thos. F. Miller, York, Neb., owner of the Cedarbank herd of Poland Chinas, starts an advertisement in which he offers at private treaty the entire spring crop of Poland China boars. Mr. Miller is one of the best breeders and general stockman within the state, and saved the past spring about 125 pigs. The very tops of them are now for sale. It is worth money to a new herd to own a boar from the Cedarbank herd, as the reputation of the herd has been built up by many years of patient effort and a display of the very soundest judgment. Sires of note have contributed liberally to the upbuilding of the herd and many of the breed's best sows have been and some of them are now on the farm. The herd boars and the sires of these spring boars are a son of Long Chief 2d and out of a daughter of Big Bone, a son of Big Price and a son of Black Big Bone, out of a daughter of Big Jumbo, and one of the very best producing sows of the entire Mouw herd. This latter boar is one of the best boars that the writer has seen from the Mouw herd, and all Poland China men are well aware that Peter Mouw has sent out a lot of the good ones. Daughters of Long King Big Bone, Long Chief, Big Price and a few other noted boars are in this herd and are the dams of the young boars now for sale. Readers of The Homestead searching for the real big ones, and of popular blood lines will do well to consult Mr. Miller before making purchases. Kindly mention The Homestead when you write.

Wm. McCurdy's Poland Chinas.

An enterprising stockman and a splendid farmer is Wm. McCurdy, Tobias, Neb. The herd of Poland Chinas that he has bred are certainly of the good sort and of very popular blood lines. A number of the foundation sows were purchased of Thos. F. Walker & Son, and were sired by that peerless breeder, Exception. Without question Exception was one of the very best boars ever used in the middle West. He sired a number of good boars and a big lot of good sows. No doubt there would have been dozens of his boars in use in good herds where there was one used had breeders realized the value of this boar before he died. He bred the greatest amount of quality, combined with size and good heavy bone and good feet of most any boar that we ever knew. He sired Blue Valley Exception, a boar used by Higgins & Son, De Witt, Neb., and this boar was afterward purchased by John Blain to use in his herd and was then considered by Mr. Blain to be the best breeding boar in the country. Mr. McCurdy still has a few of these Exception right. A young boar, a son of Blue Valley, is also in use and another young sows, and they are sure breeding boar in use is sired by a son of Columbus and out of one of the great producing sows of the Baird herd. A good lot of spring boars are now for sale and will be offered well worth the money. No sale will be made this season and everything will be offered private. Bargains are being offered right now, and to hesitate is to lose something. Mention The Homestead when writing.

De Kalb's Hampshires.

We present on page 24 this week illustrations of the H. D. De Kalb, Hampshire farm at Dekalb, Ia., regarded as one of the greatest Hampshire breeding establishments in this country. In the thickly wooded hills and dales on the De Kalb farm will be found over 300 head of registered Hampshire hogs, among which are some of the best that have ever been bred. At the head of the herd stands that noted breeding boar, Major, who has sired so many of the sensational ones that have come from this herd. He is assisted by the great young boar, King 15th, (the central figure in the picture) who is regarded as one of the most promising young boars in this country. He is a son of old Major and his dam is the great brood sow, Jennie Aylor, who has been one of the most noted brood sows of the breed. The De Kalb herd is one of the most noted in the West, and it remained for an offering from this herd at Council Bluffs, Iowa, last winter to break all records, both for the highest priced sow and for the highest average ever made of this breed. He will make another sale at Council Bluffs, on November 4th, when he will sell some of the best boars that have ever been offered at public auction, and he will also include some of his best brood sows. See illustration on page 24.

Trumans' Horses at Iowa State Fair.

Forty head of imported Shire and Percheron stallions and mares will be exhibited at the 1913 Iowa State Fair by Trumans' Pioneer Stud Farm, Bushnell, Ill. It seems hardly necessary to say anything commendatory of this veteran importing and breeding establishment, the men behind it or the class of horses they handle. For over a third of a century no institution has done more to place the draft horse industry upon a high plane than have the Messrs. Truman. While they have done so much for the draft horse business as a wohle, their main effort has been in the interest of the sturdy English Shire, and the present high place occupied by that popular breed of drafters is due more to the work of the Trumans than to all other influences combined. True, this could not have been done had not the Shire combined all the necessary qualifications for a perfect draft animal, but the work of the Pioneer Stud Farm is bringing to America only the class of horses that gave a satisfactory account of themselves under the most severe conditions was the prime factor that placed the Shire in the front rank of draft horses. J. H. Truman, the founder of the Pioneer Stud Farm, and the father of the American members of the firm, resides in England, and to his unerring judgment as a buyer is due a great measure of the success that the firm has achieved. Only the good kind can command any attention from Mr. Truman, and no price is too long to pay for any animal that suits him. As a consequence the very best that the studs of England can produce are at the first call of this grand old veteran, who has been a stalwart fighter for better live stock and live stock conditions all his life. The Pioneer Stud Farm will be better equipped than ever this year to care for the wants of discriminating buyers, because they have secured one of the very best lots of horses that money and experience could find on the other side of the water, not only in Shires, but in Percherons as well, and at the Iowa State Fair this year, the same as for many years past, the Truman horses will be in the front rank, where their quality and worth justly place them. The name Truman stands for all that is best in draft horses as well as for the highest type of honorable dealing in the business world. The gentlemen of the Pioneer Stud Farm invite all readers of The Homestead to inspect their offering at Des Moines this year.

TOO LATE TO CLASSIFY.

FOUR HIGH-CLASS Poland China Fall Boars

I AM offering four splendid fall boars for sale, sired by the 1,000 lb. boar, **Big Orange,** and **Colossus.** Two of these are out of Colossus and A Wonder dams and two are out of a Giantess dam. Also thirty spring boars by Big Orange and Colossus. Write me for prices and mention Iowa Homestead. Address
L. R. M'CLARNON - - - - - - **BRADDYVILLE, IOWA**

Russell Buys King Pontiac Asian.

To one who has ever visited there the name Idle Hour Place, at once suggests a magnificent herd of exceptionally choice Holstein-Friesian cattle and the proprietor, T. H. Russell, Geneva, Ohio, has been untiring in his efforts to secure a herd which should not only be pleasing to the eye from a standpoint of individuality, but one that should prove profitable in everyday performance from the standpoint of a practical dairyman. No doubt the realization of the sometimes sad truth that a good sire is the making of a herd and that a poor one will ruin it has had much to do with the selection of the herd at Idle Hour Place and one fact that has always characterized the herd is the high quality of the sires that have been kept at its head. It is not the purpose to here discuss Pontiac Hengerveld Parthenea, De Kol Hengerveld Burke and others of its sires whose work is Holstein legion and whose names are indelibly stamped in the roster of the world's greatest dairy sires. Rather, it is the intention to set forth in a brief way a few of the good qualities of the latest acquisition at Idle Hour Place, viz., King Pontiac Asian. Regarding the individuality of his bull, the fact that he was selected by Mr. Russell is a sufficient guarantee of superiority and it would be hard, indeed, to fault the breeding for it would seem no combination could be obtained upon which might be depended better results. The dam, Pontiac Asia, produced in a week 26.18 pounds of butter with an average of 83 pounds of milk per day, making in 30 days 105.8 pounds of butter from 2,259.9 pounds of milk. Eight months after freshening she produced more than does the ordinary cow at freshening as she made for a week over 46 pounds of milk per day and continued well in official work having to her credit 742.06 pounds from 17,963.6 pounds of milk in 336 days. Pontiac Asia was by Hengerveld De Kol from Pontiac Lachesis, a good A. R. O. daughter of Sir Inka Artis Mechthilde and Terra, both of whom have demonstrated a rare ability to transmit great producing qualities for several generations. It was one of the daughters of Sir Inka Artis Mechthilde that is dam of Pontiac Artis (31.71 pounds) and Pontiac Jewel (30.72 pounds) one of the very few pairs of 30-pound full sisters, and Terra will be remembered as the dam of Pontiac Pleione who gave over 90 pounds of milk per day for a month and in 346 days made 925.56 pounds of butter from 24,820.2 pounds of milk. Owing to the fact that Pontiac Pleione freshened at this time it was impossible to continue the semi-official test the full year although in the full year she produced over 26,000 pounds of milk, certainly a wonderful production. Pontiac Lachesis has also been proven a cow of more than ordinary quality in that she has one proven son and three A. R. O. daughters with records of 21 to over 26 pounds each. Thus, it will be seen that Pontiac Asia and several of her three-quarter sisters are classed as some of the best daughters of Hengerveld De Kol. The sire of King Pontiac Asian is King of the Pontiacs, who as a calf was rightly named, being by Pontiac Korndyke from a 28-pounds daughter of Hengerveld De Kol, the two great Pontiac sires and two as great sires as ever lived and as a sire King of the Pontiacs has far surpassed the great things that were expected of him. His daughters in semi-official test greatly exceed the work of the daughters of any other sire. His daughters that have made records greater than 26 pounds of butter in a week as two year olds out number those of any other bull. Four of his daughters have made records greater than 30 pounds of butter in a week including the former world's champion senior and junior three year olds, also the famous K. P. Pontiac Lass, who astonished the world with the marvelous production of 44.18 pounds of butter in a week, 171,5 pounds in 30 days, productions that have hitherto seemed but idle dreams. King Pontiac Asian is a three-fourths brother to K. P. Metis whose records as a junior three year old of 31.74 pounds of butter in a week and 130.59 pounds in 30 days were world's records at the time, and, as will be seen, his ancestors, sisters, aunts, cousins, all, include the greatest animals yet known to the dairy world. It is little wonder then that he was selected at a long price to go to the Idle Hour Place herd and even the most pessimistic can hardly fail to predict a most excellent future for this royally bred sire.

Cope's Poland China Herd.

A representative of this paper last week visited the farm of J. H. Cope, Carlisle, Iowa, who has a most excellent herd of Poland China hogs, and announces a public sale to take place at the Iowa State Fair grounds, September 26th. Mr. Cope has built up an unusually good herd of hogs and has done so without blowing his own horn. As a result he has a herd which is well worthy of a good deal more attention than it receives. The mature brood sows in his herd are great big animals with good length, strong, well-arched back, well-ribbed out, good feet and legs and generally attractive heads and ears. They are a lot better in these respects than most big-type herds. They carry these high qualities because of the careful attention which has been given to right selection and lines of breeding. At the present time the herd is headed by Long Mastodon, a three-year-old son of King Mastodon that gained so much prestige in the Wheeler herd. His dam was Lady Mastodon 12th, by Surprise Wonder 5th. Long Mastodon is practically a Mouw-bred hog from top to bottom. He is a big fellow, very deep and broad, with a good back and strong bone. He is an unusually good big-type herd boar and one which under the circumstances should go into some good herd. Mr. Cope cannot use him any longer and for that reason will let him go for the first check for $50 that reaches him. The hog is worth double the money. In later issues we will give additional details with reference to the consignment.

Good Duroc Jersey Hogs.

If any of our readers want a good Duroc Jersey boar they should write to or go and see B. W. Hunt, Denison, Iowa, who has forty head of fall and spring boars for sale. He has sons of the great King of Cols., C. H.'s Special, Model Advance, Gold Dust Prince and Grand Chief, and he is pricing these where they will sell. Mr. Hunt says to us that if the boys will only come and see these boars they will not go away without one, as his prices are right. He is pricing the spring boars at $25 if taken soon. When writing Mr. Hunt kindly mention The Homestead. See page 31.

P. W. Weberg, Denison, Iowa, is advertising Duroc Jersey boars sired by Crimson Wonder 3d, C. H.'s Special, Crimson Wonder Again and other noted sires on page 31. He also offers ten head of sows bred to the grand champion boars, Crimson Wonder 3d and C. H.'s Special for fall litters. Get your order to Mr. Weberg for some of these just as soon as you can, as they are not going to last long. Mention The Homestead when writing him.

HORSES.

Good's Horses At Iowa State Fair

I WANT every one to come and see my horses at the Iowa State Fair. I will be there with 20 Imported Belgians and Percherons. A strong line of three-year-old stallions, some younger ones that include colts good enough to go anywhere. Useful mares of breeding age. These horses are not fat, but they are in form to make money for buyers. There are some bargains among them. Come and look them over, even if you don't want to buy.

SHORT-HORN BULL Bargains. Four extra choice bulls at very low prices. B. F. Mason, Seward, Nebraska.

BERKSHIRE SWINE.

IOWANA FARMS BERKSHIRES

THE **great champion, RIVAL'S CHAMPION 112500,** in service. Assisted by Artful Belle's Rival 3d, Masterpiece Rival 2d and other leaders.

700 Spring Pigs For Sale. Splendid type, uniform, well grown. **No culls.** All sired by the above boars and from the richest maternal ancestry known to the breed.

Every Animal Cholera Immune. We have sent pigs out into the cholera districts where hogs were dying every day from the disease, and **in no case have we ever had one of our pigs take the cholera, although they were left there for weeks at a time.**

We aim to supply the wants of those desiring good stock and ship nothing else. Write us clearly what you are after, or better, come and see us. Mention The Homestead.

IOWANA FARMS, DAVENPORT IOWA.
J. L. Thatcher, Manager.

When writing to advertisers please mention The Homestead.

POLAND CHINA SWINE.

COOPER'S BIG-TYPE BOAR PIGS

Will make hogs that will weigh from 700 to 1,000 lbs. They have the blood lines that mean size and outcome to every one of them. We have **75 head of corking boar pigs** that we will record, guarantee safe delivery. They have been immunized. We will sell them at

25 DOLLARS EACH—A price they will bring on the market after you use them

They are sired by our 900-lb. boar, Big Bone 2d, that measures over 11 inch bone, with all the quality of a show type. Others sired by the 800 lb. two year old, Big Expansion; some by Chief Leader, a 600-lb. yearling, Ideal Chief and other noted boars. **The dams are sows of intense big-type breeding, weighing from 500 lb. year olds, up to sows of over 800 lbs. LISTEN.** If you want a boar, of the biggest breeding, one that will make a big hog, one that you will pay from $40 to $75 for this fall and no-better, send us your check, the first letter, tell us the kind you want; we will either send the hog or return your money. **Again, if you like your money better when you get the pig, return him; we will refund your money.** Where will you get a more fair deal? You won't buy such breeding at the price again this year. Buy your boar now and save from $20 to $50 on him.

W. H. COOPER - - - - - - - - - - **HEDRICK, IOWA.**

BIG BONE 2d 161497.

Overland

Price comes down; value goes up!

Electric head, side and tail lights
Storage battery and Ammeter
35 horsepower motor

114-inch wheelbase
Timken bearings
33 x 4 Q. D. Tires
Cowl dash
Splitdorf magneto

$950

f. o. b. Toledo

Brewster green body with a light green striping, nickel and aluminum trimmings
Mohair top and boot
Clear vision windshield

Stewart speedometer
Electric horn
Flush U doors with disappearing Hinges
Turkish upholstery

With Gray & Davis Electric Starter and Generator—$1075

HERE is the car of the hour!

The 1914 Overland is ready for immediate delivery.

Again we lower the price. Again we increase the value.

This new car is larger, more speedy and powerful, more finely equipped and more elegantly finished, but in spite of this enormous value increase the price has been materially decreased.

The motor has been enlarged to 35 horsepower and will develop 50 miles an hour with ease.

The wheelbase has been lengthened to 114 inches—which is the average wheelbase of $1500 cars.

The 1914 Overland tires are larger; the tonneau is longer and roomier; the equipment is better—including such big and costly additional features as electric lights; the body is handsomer, being finished in beautiful rich dark Brewster green, with heavy nickel and aluminum trimmings.

The 1914 Overland is the most magnificent and graceful popular priced car that has ever been made.

In fact, in every single and individual respect here is a much greater, bigger and better car at a reduced price.

This is only another demonstration of how big production will cut costs. For, instead of building 40,000 cars as in 1913, this year we will build 50,000 cars. This is the world's largest production on this type of car

One big western dealer is begging our sales department for an allotment of 7000 cars. Think of this! A single allotment greater than the individual outputs of over 50% of all the automobile factories in existence.

Other dealers and distributors in the big eastern and western agricultural districts want several thousand cars apiece. Such is the initial demand for the newest Overland.

As we have told you in the past: the combined buying power of thousands lowers the cost for each individual. This year 50,000 will be bought. Therefore we can make a greater reduction than ever. Overland quantity production saves money for you—and lots of it. This year it is saving far more than ever before, because in addition to increased production we are building but one chassis.

We urge you to see this new model at once. Feel what a difference the increased wheelbase makes in riding comfort; see the car's changed appearance; examine the beautiful new finish; inspect the many little refinements about the motor—making it resemble the motors in the big $3,000 and $4,000 cars. Examine the tonneau. Enjoy the increased lounging space and the Turkish upholstery.

Look up the nearest Overland dealer. Have a demonstration. Make the demonstration thorough; test the car's remarkable fuel economy. If you want an early delivery do not delay. Act today.

Write us direct for handsomely illustrated 1914 literature—gratis.

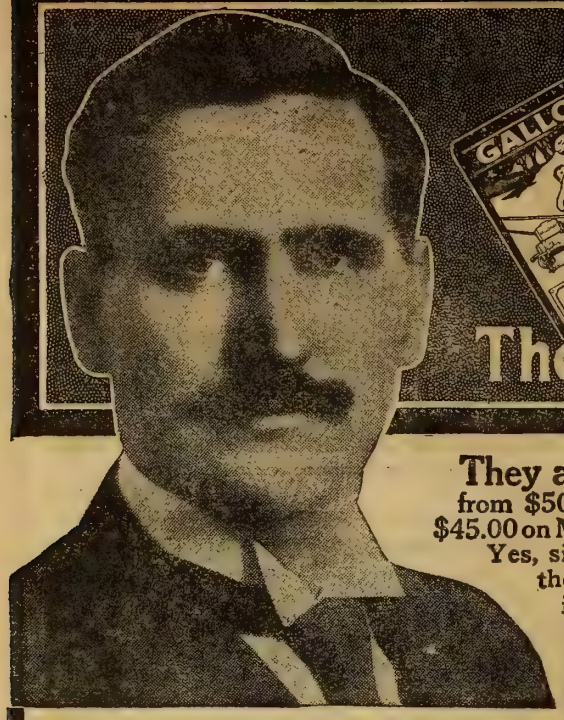
PASTURE PLEASURE SPOT

These Books Are My Only Salesmen



They are the best and cheapest salesmen in the world. They will save you from $50.00 to $300.00 on Gasoline Engines; $35.00 to $50.00 on Cream Separators; $25.00 to $45.00 on Manure Spreaders and from 20 to 50% on hundreds of other articles for the farm, home and family. Yes, sir; my catalogs are the best and cheapest salesmen on earth. And I can mail any one of them to you for considerably less than what a salesman ordinarily pays for a good cigar—in other words, a two or three-cent stamp pays all the traveling expenses of my Catalog Salesman. My Catalog Salesmen show you just how Galloway Machines are made, the kind of materials they are made of, the sort of high-grade, modern machinery used in their construction, and explain in simple terms our "Square Deal," direct-from-factory, one-profit only, plan of selling. You'll find all my statements and claims in "black and white" always before you. My Catalog Salesmen won't bother you or take up your valuable time when in the field or at work on some important job, but they are always at hand when you want to consult them. And best of all, they save you big money for they save you all the middlemen's profits. When you buy of Galloway you pay JUST ONE SMALL MANUFACTURER'S PROFIT in addition to the actual cost of materials and labor that enter into the construction of the machine. It's this "short cut"—"direct from factory" plan of selling that makes it possible for me to offer you as high a grade 5 h. p. gasoline engine as there is on the market today for only $99.50, or a complete manure spreader at only $69.50 and the new incomparable 500-lb. capacity Galloway Sanitary Cream Separator at only $42.50. Now, all you have to do to get the benefit of my tremendous money saving prices is to write for one of my catalogs. THEY ARE MY ONLY SALESMEN. Send for the Catalog you want today. I am making it easy for you to get these books—for all you need to do is just fill in the coupon below, tear off and mail today, for catalog wanted—or just write me a postal.

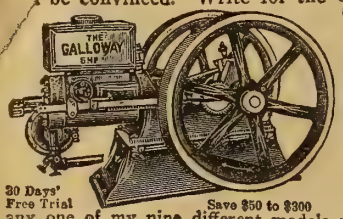
Now I am Going to tell You Some Inside Facts about My Business

I haven't any secrets about my business—the more my farmer friends know about it the better I am satisfied. My offices and factories are always open for your inspection. Thousands of my farmer friends and customers visit our big chain of factories every year and see at first hand just exactly the way we build our machines and examine the materials that are used in their construction; then go back to their homes more than ever satisfied that every statement and claim I make about Galloway Made Machines is true. I only wish every farmer in America could see just how Galloway Machines are made. If you could, my factories would have to be enlarged to ten times their present size (7½ acres of floor space) and then couldn't meet the demand. I know it. Because Galloway Made Machines have the merit—that is proven today by the fact that our satisfied customers (over 135,000) can be found in every state in the Union and in over thirty Foreign Countries. Seven years ago the name "Galloway" was practically unknown—today the "Sun never sets on Galloway Made Machines." No big business is built by accident. It's got to have something substantial back of it. Isn't that a fact?

Now, I've enlarged my line this year so that I can supply you with anything you want for the farm, home or family. My big 144-page Merchandise Book is chuck full of bargains on machinery and implements, household furnishings, rugs, carpets, tapestries, linoleums, stoves, furniture, sewing machines, buggies, harness, washing machines, clothing for men, women and children, watches and jewelry—and many other lines—all selling at regular wholesale prices. Get my big General Merchandise Book and let me save you 20 to 50 per cent on the things you buy. It is the big catalog shown at the right at top of page. Write for it today. Just use coupon below.

The Only Way is the Galloway—Selling Direct from Factory to Farm

Let me prove it to you. I want to show you just what a man can do for you when he will sell you **direct from his own factories to your farm.** I want you to see for yourself what an amazing difference it makes in prices when you don't have to pay a lot of middlemen's profits. I want to show you how simple and easy it is to buy by mail the Galloway Way. With every machine backed by a 30 to 90-day Free Trial Privilege—a strictly legal five-year warranty on materials, printed in black and white, that goes out with every machine that leaves our factories—and a $25,000 Bond that guarantees you right at the start that we will fulfill every claim and statement we make—Now, just consider this plan a minute. Read it over again. Then tell me—Did you ever buy goods of anybody where you had such a perfect guarantee of satisfaction back of them? Never! Then, best of all, I will make you practically any terms you want—on any Galloway Made Machine—terms that our competitors cannot equal and prices never before even approached by competition on strictly standard, high grade machines. That's what it means to v the Galloway Way—that's why thousands of farmer business men will tell you the "Only Way is the Galloway—Selling Direct from Factory to Farm." Try it be convinced. Write for the Catalog Salesman you want me to send to you today. Fill in coupon below.



30 Days' Free Trial — Save $50 to $300

The Famous Stationary Galloway 5 H. P. Engine. New Low Price Now Only $99.50

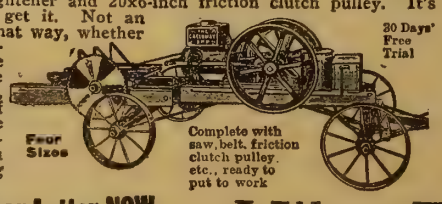
F. O. B. Waterloo, Chicago, Kansas City or St. Paul

Your choice of any size or style of the entire Galloway Line from 1¾ h. p. to 15 h. p., mounted or stationary, at prices to match this never-before-heard-of price on my Famous Galloway 5 h. p. Stationary Engine. Yes, sir; I'll let you pick out any one of my nine different models you want. I'll let you test it any way you choose right on your own farm, at my risk. I want you to compare it point by point with any style or make of gasoline engine on the market, and I don't care what the other engine costs. I'll put any Galloway engine right up against any other engine made, absolutely regardless of price, and let you keep the engine that suits you best. But, remember, when you buy of me I agree to save you from $50 to $300, depending on the size you buy.

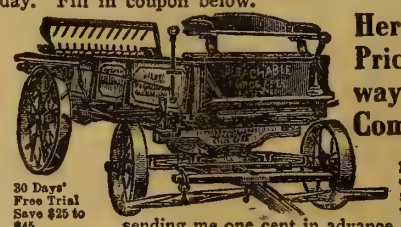
Can you beat that offer? Never! You can't equal it anywhere. And I've been making just this sort of offer for years and my engine business has grown by leaps and bounds every year. Why? Simply because I am giving my customers a better engine for less money than any other concern in the country. When I sell an engine it helps me sell more right in that section. Remember, on my direct-from-factory plan you must be satisfied or your money will be cheerfully refunded and I will pay all the freight. You take no risk whatever and I back up this offer with a $25,000 Bond for your complete protection. But the best proof of all are my 35,000 satisfied Galloway engine users.

$172.50 Buys a Complete Galloway 5 H. P. Portable Wood Sawing Outfit

That means complete portable engine with detachable saw frame, saw blade, saw guards, belt and belt tightener and 20x6-inch friction clutch pulley. It's ready to put right to work when you get it. Not an extra to buy. All my engines are sold that way, whether stationary, portable, sawing rigs or combination outfits. If you need a fine pumping outfit, combination of engine and power washer, engine and churn, engine and small grinder and a dozen of just such combination small or large power plants, write me now. I am making special combination prices that you can't beat. Get my engine catalog today. Just fill in coupon below.



Send This Coupon or a Postal or Letter NOW



30 Days' Free Trial — Save $25 to $45

Here's My New Low Price on the Galloway No. A, 50-60 Bu. Complete Spreader $69.50

F. O. B. Waterloo, Chicago, Kansas City or St. Paul

And right on top of this remarkably low price I will make you this absolutely unheard-of offer. I will send you any one of my seven styles of spreaders to your farm and let you try it absolutely at my own risk without your sending me one cent in advance or making any bank deposit. All I ask is your bank reference. This offer is open to any responsible person, anywhere. Now, that's the sort of confidence I place in my unsurpassed spreaders. Did you ever get an offer like this before from anyone? Never! But I know my spreaders will stand any test you care to give them. My confidence is not based on my own judgment alone, but on the judgment of over 40,000 satisfied Galloway Spreader customers. My new Catalog shows my new, unequalled, low-down, semi-underslung spreader. Get it.

Now is the time to write me for I've made the most phenomenal slash in manure spreader prices in history. I've simply gone the limit. I've cut 'em clear to the bone. Yes, sir; you want my spreader prices before you consider buying any other style or make. Get my Spreader Catalog Salesman. Just fill in coupon.

$42.50 That's My New Direct-from-Factory Price on the New Galloway Sanitary 500 Lbs. Cap. Separator

Now, don't be misled by other concerns making a lower price than this. Note first what the capacity of their machine is then note my price and capacity. My 500-lb. capacity machine is the smallest size I make and it's absolutely the smallest size it will pay you to buy. Then I make a 750 and 950-lb. capacity machine. Here's the cream separator you have been looking for. It's the most modern, most sanitary and closest skimming cream separator ever built. It took us three years to perfect, build and market this new incomparable Galloway Sanitary. It hasn't its equal on the market today from any standpoint, regardless of price, and yet I say to you, when you buy it I will save you positively from $35 to $50.

I am making a special 90-day Free Trial Offer on this wonderful machine because I want every man in the market to give it a good trial entirely at my risk right alongside any other separator built, you to keep the machine that does the best work and suits you best.

Get my catalog telling all about my New Sanitary, how it's built, the sort of materials used in its construction, terms, prices, etc. Just fill in coupon and mail to me today sure.

Where Plowing Becomes an Art

Annual Contest at Wheatland, Illinois, Brings out Thousands of Visitors—Tractor Plowing the Center of Interest

CATO of old enunciated the three fundamental principles of farming to be: first, good plowing; second, good plowing; third, good plowing, so do the leading farmers of Wheatland township, Will county, Illinois, regard the skilful plowing of the land as the basis of a sound agriculture. With the foresight of a prophet, annual plowing contests were inaugurated in this district by "Uncle Jimmie" Patterson in 1877. The events are held annually with ever-increasing interest. There were approximately 8,000 visitors in attendance on the farm of Mr. Fred Westphal on Thursday of last week when plowmen from the Wheatland and Big Rock districts again clashed swords.

The classification upon this occasion included walking plows; riding plows, either gang or single; the prize winners' class, intended for those who had taken the first premium in any man's class at Wheatland or Big Rock matches; the post-graduate class, in which were entered plowmen who had taken a silver cup two years in succession at any plowing match. In addition there was the tractor plowing class, open to manufacturers or to farmers owning tractors.

Although liberal cash premiums were offered in the walking plow class for men and boys, not a single entry was made in these classes, indicating possibly as accurately as any other factor the working of the law of evolution as applied to plows. When these contests were started there were no riding plows and of course no tractors. In commenting on this phase of the contest Mr. Patterson, the originator of the whole movement, said: "The disappearance of the walking plows altogether in these contests and the interest that is now shown in the tractor classes, as indicated by the number of visitors who are walking the headlands where the tractors are at work, indicate to me that it will only be a matter of a few years until the tractor plow will have the center of the stage. It is my opinion that in another decade practically all our plowing will be done by steam, kerosene or gasoline."

A scale of points has been worked out in the Wheatland district by which the work of every plowman is scored. Out of a possible 100 points twenty are given for a perfect opening; twenty-five for "evenness of furrow;" twenty-five for "conformation of furrow;" twenty for "straightness," and ten points for "neatness." The winner in the post-graduate class, Mr. Frank Boardman, lacked but one point of a perfect score, the judges cutting him to this extent on "conformation of furrow." All contestants in the prize winners' class, as well as the post-graduates, opened up their land by first cutting a very light furrow, upon which the two crown furrows were thrown so as to meet fairly in the center of the first "scratch." So successfully was this opening made in many instances that it was almost impossible to distinguish the crown furrows from those adjoining. By outscoring by two points the veteran plowman, Mr. William Fairweather, special honor goes this year to the winner, Mr. Boardman. In each case the finished land looked wellnigh like a masterpiece of perfection. The Fairweather furrows were so true, straight and even that it was impossible for many visitors to detect in them even the slightest defect and there were those on the headlands who believed that here was a piece of plowing entitled to the full 100 points. The judges who passed on the work were most painstaking and their awards must stand as the decision of the highest court. Mr. Boardman's score of ninety-nine points will probably stand for many a day before it is surpassed or even equaled.

THE VETERAN PLOWMAN, WM. FAIRWEATHER.

Each competitor with a riding plow was obliged to use three horses and was required to plow half an acre, while with the gangs four horses were used and three-quarters of an acre required. The work was to be done in three hours. Some latitude was allowed the plowman in regard to depth, this varying from five to six and one-half inches. A level bottom for each furrow was compulsory. No handling of the soil was allowed, as each furrow had to be left just as the plow turned it. While no allowance was made in the scale of points for turning under the trash, as a matter of fact plowmen vied with one another in their efforts to completely bury everything in the nature of stubble or weeds. The weed hook was on many plows supplemented by a log chain swung from the singletree of the furrow horse to the beam. As the result a twelve-inch growth of annual weeds, as well as long stubble, was completely and absolutely turned out of sight.

When the plowmen in all classes had lined up it was discovered that only the Janesville plow was being used, so that it was therefore an out and out contest between men and not between plows. What is known as a "special" bottom was used by every plowman. This type of moldboard turns the furrow smoothly, a little after the fashion of the old Scotch sod plow, and yet at the same time pul-

HOGGING OFF CORN.

The following communication has been received from Mr. A. A. Burger, agricultural adviser of Blackhawk county, Iowa:

As a method of feeding hogs for market there is nothing which is more satisfactory than "hogging off" standing corn. It is cheaper than the best methods of dry-lot feeding. It is satisfactory from the standpoint of the labor which is saved, and in these days of scarcity of labor and of high prices this question is becoming more important. And as our agricultural products increase in value it is more important that we follow the best systems of feeding. Certainly the up-to-date farmer will welcome any method which will reduce the cost of production.

A few years ago "hogging off" corn was looked upon as a slovenly, wasteful method. It was an indication then of a shiftless farmer, a man who desired to accomplish results without work. But today there are enough who have had experience with this method of feeding to know that from every standpoint it has been satisfactory. It was thought at one time that too much corn would be wasted. Actual tests disproved this. Indeed, hogs will waste less corn than the farmer were he to shuck it himself, except perhaps in extremely wet seasons, and in this case hurdles may be used and only as much corn allowed as can be cleaned up well in a week or ten days. The pigs can usually be turned in about the middle of September or about the time the corn is beginning to dent. Usually about ten pigs are used per acre. They may vary in size, but the most satisfactory results are generally secured with pigs weighing eighty to 100 pounds. Pigs that are larger than this drag down too much corn in the beginning and are inclined to waste it. When the pigs are too small there is a tendency toward chuffiness. It must be remembered, in this connection, that "hogging off" is not a method of growing pigs, and hence pigs which have not attained sufficient size and weight should not be used.

Some idea of the economy of the method may be had from the replies from men who have followed this system for the last ten years. In every case they have agreed that pork can be produced at a saving of five cents per bushel of corn fed, over the dry lot methods of feeding. In most of the cases over ten pounds of pork have been secured per bushel. The method has effected a saving in the cost of handling and storing the corn, which under ordinary conditions would amount to about ten cents per bushel. It is not alone that there is a saving in the feed, but it would seem that the additional feed which can be secured in the fields and the exercise which the hogs get are conducive to more rapid gains.

It will always be advisable in "hogging off" corn to feed some supplementary feeds. The most common of these will be red clover pasture, alfalfa pasture, rye and rape. Of the different feeds, perhaps rye sown in the corn field at the last cultivation has given the most satisfactory results. But where no rape has been sown in the field, it is a good plan to provide some other pasture, and if pasture cannot be had, then the feed should be supplemented by some concentrated feed like oilmeal or tankage.

At the Missouri station, hogs weighing 140 pounds were turned into corn in which rye had been sown at the last cultivation. The pigs weighed 200 pounds when they were removed from the field, and at sixty cents per bushel returned $36 per acre. At the Iowa station one lot of pigs returned 568 pounds of pork. This gain was secured with the cowpeas sown in the corn at the time of the last cultivation. The pigs were allowed to remain in the corn field for thirty days.

In regard to the method of fencing, the practice has been quite varied. Some have used hurdles; others use twenty-six-inch woven wire fence tied to the stalks. Still others put in posts two or three rods apart and stake the wire with small stakes between. Some have simply turned the hogs into the entire patch and have allowed them the run of the whole field until it was cleaned up. This will be satisfactory when pigs enough to clean up the whole field can be used, and providing that the season is not too wet. Whether the pigs should be allowed to remain in the field until all of the corn is cleaned up is a question which the farmer must decide for himself. Very frequently it will be found advisable to remove the pigs, finishing them in the dry lot and cleaning up what is left in the cornfield with stock hogs. Both methods are very successful.

Unquestionably this method of handling the corn crop is increasing in popularity and, as stated by Mr. Burger, it is not slovenly nor is it a wasteful plan. Indeed, it is a safe and sane system of handling at least a part of the corn crop, economizing first in labor and secondly in the making of gains more cheaply than will result from any other system of feeding. We would call special attention to the importance of feeding a concentrated product like oilmeal or tankage as suggested by Mr. Burger, otherwise the corn might prove a little too heating and throw the hogs out of condition by deranging the digestive system.

MUDDY BARNYARDS.

No better use can be made of a supply of straw than to throw it around the barnyard freely when the yards begin to puddle in the fall. Every man knows that liquid manure should not be allowed to waste, but, on the other hand, there is real loss and discomfort when live stock are compelled to stand up to their knees in mud and to make their beds under the same filthy conditions.

By spreading a foot or two of straw around the yard at this season of the year two purposes are accomplished. In the first place the yards will be much more easily cleaned next year if there is a layer of straw on the surface than will be the case if manure is puddled and mixed up with the soil. As to the benefit derived from the greater comfort which the practice means to live stock, no emphasis need be placed on this matter because every stockman knows that comfortable surroundings contribute immensely to cheap gains.

It is no uncommon thing to find straw-stacks two, three and even four years old on some farms of the corn belt. Why not turn in and spend a half day getting one of these old stacks or stack bottoms spread over the yard where it will accomplish something that will result in conserving fertility; that will add greatly to the comfort of live stock during the coming months, and thirdly, that will add not a little to the pleasure of those who are called upon to do the choring during the coming fall and winter?

THE EARLY MOVEMENT OF CATTLE.

A certain indication of the present pasturage condition is the early movement of cattle. With the ending of the pasture season ordinarily a month off, pastures are already being emptied of cattle that owners had intended marketing as soon as the feed in the pastures was gone. In many cases cattle are being put on the market that would not have been sold had feed conditions been better and stock water been sufficient for all needs.

The early movement of cattle means that the shipment will not be as large as at the usual time, which is ordinarily around the first of October. Cattle are being sent to market now that usually would not have gone until about that time. No one should be misled by the idea that the supply of cattle is large because receipts have been large during the past few days, as it is simply a premature movement from the pastures, due to the scarcity of feed and water. Later on, at the time of usual heavy shipments from pastures, no doubt receipts will be light. We are simply ending the pasture season a month earlier than usual this year.

The other day all receipt records were broken at the Kansas City yards when 38,000 cattle were received. That the market received no serious setback so far as prices were concerned is proof that it is impossible to lower very greatly the present value placed upon cattle. This is indicative of two things: that cattle are so scarce as to be entirely insufficient to supply demands for beef and that the country is in good financial condition and not in a mood to be upset by adverse crop conditions. In the meantime, those who possibly can do so are holding their cattle. In striking contrast to shipping conditions in 1901, folks are not shippng their cattle except as feed and water conditions make it necessary to do so. Then, stock was shipped not because it was necessary to do so, but because folks were panic minded.

WHY ENSILAGE IS SO PALATABLE.

The prime requisite in computing any ration for live stock is to make it palatable. The feeding ingredients may be ever so ideally balanced and the compound might be fed in the most up-to-date fashion, yet if it is not palatable there is absolutely no way of convincing animals that they should eat it with relish because of its food value. Going a step farther and inquiring into what constitutes palatability we have an excellent illustration in the case of ensilage. While ensilage contains a high percentage of water and a relatively small percentage of dry matter, yet very different results are obtained from its use and feeding dry fodder, allowing live stock to consume all the water they desire. It has been demonstrated in an experimental way that 100 pounds of grass fed green is worth considerably more than fifteen pounds of dry matter fed in the form of hay or dry grass supplemented by an abundant supply of water even though green grass contains but fifteen pounds of dry matter. An additional fact should be kept in mind when we try to account for the great value of ensilage, namely, that the animal will consume more dry matter and digest it more completely when it is fed in the form of a succulent food than will be consumed and digested if the food is fed dry.

The practice, therefore, of storing a supply of succulent food for winter use or even for next summer's needs is sound scientifically. Even though ensilage were no more palatable than dry fodder it would still pay to use it because of the convenience in handling, but when it is pointed out that a good quality of ensilage is much more palatable than dry fodder even under ideal conditions the case in favor of ensilage is clearly proven. Moreover such dry food in the form of grain or roughage as may be used in conjunction with ensilage is more completely digested and assimilated than if dry food alone is used. In this respect ensilage may be truly classed not only as a food of the highest value, but in reality as a tonic, whetting the appetite and stimulating the flow of those fluids that take an important part in the process of digestion. All this is accomplished without any injurious reaction that ordinarily might be associated with the use of chemical stimulants.

SOME BENEFITS OF AN AGRICULTURAL CLUB.

One of our subscribers, Mr. W. D. Neale, submits the following interesting description of an agricultural club that has been established in his community:

About a year ago an agricultural club was organized in our community. There were a few farmers who felt the need of such a club and organized it. Today there are 300 members, comprising farmers from every section of the country. It has grown in influence and today is renting a building on the main street of our city, which is fitted with chairs and desks. Here the club meets every Saturday evening for business. There are many benefits of this club.

In the first place, there is a social benefit to the farmers. Here they meet, exchange greetings and enjoy a social chat. Thereby the farmers of the community and the county are becoming better acquainted. This means a closer bond of sympathy and a better co-operation in their work. It seems of all men the farmers should have a kindly and interested feeling one for the other. But if they never meet together and become acquainted this spirit will not exist to a great degree. The agricultural club is cultivating this spirit among the farmers.

This club has been securing from agricultural colleges and elsewhere experts on many subjects of farming. These men have addressed the club on special occasions and have been very helpful to the farmers in giving them information on important subjects. By this plan the farmers have brought the agricultural college to themselves. For instance, one week an expert on dairying addressed the club, another week a silo specialist and at the close of these addresses the farmers were permitted to ask questions. Needless to say they kept the experts busy for an hour or more answering their queries.

Thus the farmers have been informing themselves on the best methods of farming, feeding, dairying, stock breeding, etc. The fruits will be seen in an improvement along these lines and greater prosperity among the farmers.

Then the farmers have as they call it "an experience meeting." At this time it may be several subjects will be covered. One recent Saturday such a meeting was held and poultry and hog raising were discussed. Farmers gave their methods of conducting each business, spoke of their successes and losses, offered practical hints in regard to treatment of diseases and in conclusion gave the profits of such a business. There were lively discussions, funny jokes, lots of information and a general good time. Each one felt he had been helped by the meeting. It was worth while.

The club has also become interested in securing better laws for the farmer, so a committee has been appointed to draft petitions to the state legislature for certain laws which the farmers feel will be helpful to them. The influence of the club will no doubt be felt all over the state in better laws for the farmer.

With the rapidly changing conditions as applied to farm life, the necessity for having just such clubs as the one described by Mr. Neale is becoming more and more apparent. After all it simply means a form of sensible co-operation that is peculiarly adapted to conditions as they exist. When organized in this way farmers of a given community place themselves in a position to stand shoulder to shoulder on every question that affects the welfare of the community. If no other benefit is derived from this kind of an organization save only that which relates to the improvement of social conditions in a given locality, this alone more than justifies the existence of such a club as is here described.

LOGIC FOR THE BEAST

I WISH my horses had some sense,"
Said Farmer Johnny Haines;
"There never were two plugs so dense;
They haven't any brains.
Gee out! Gee out! You bonehead plug,
You're tough-mouthed as a mule!
Whup! Pshaw, you've smashed my water jug,
You clumsy-footed fool!"

"I wish those chickens had some brains,"
Said Johnny with a frown;
"They roost so low that when it rains
The little fellers drown.
I wish my cows were not such fools;
Their denseness can't be beat;
They stand right in the drinking pools
And roll them with their feet.

"Those pigs rush up and spill their slop
Before they get it downed;
The horses, when I feed them chop,
Waste half upon the ground.
Their senseless antics give me fits;
It's more than I can stand.
But if the creatures had some wits
Farm life would just be grand."

Next morn when Farmer Haines awoke
The beasts stood by his bed,
And they had wits, and up they spoke,
And this is what they said:

"Get out of here, you hair-brained dunce,
There's work for you to do.
You drove us 'round these acres once,
But now we're driving you."

They went and hitched him to the plow,
The horses held the reins;
"If you try any balking now
We'll just kick out your brains!"
The cattle said: "We'll hook your ribs;"
The chickens said: "We'll bite,
Unless you fill the bulging cribs
To feed us creatures right."

The food he cooked the piggies ate,
And let him have the scraps;
They worked him early, worked him late
And plied his back with straps.
When winter's snow fell on his head,
They didn't care a darn;
They hovered in the house well fed,
And kept him in the barn.

As in the manger stall he stood,
A halter on his jaws,
He vowed that man can do no good
By changing Nature's laws.
"For brains in brutes I used to pray;
I'm sorry now I spoke."
Just then the nightmare passed away
And Farmer Haines awoke.

—Kansas City Times.

GRAIN FOR THE WEANLING.

It is a simple matter to take 200 or 300 pounds from the mature weight of a horse by a little carelessness during the period of colthood. We have in mind especially the weaning period when we call attention to the urgent necessity of keeping the colt growing continuously in order that his baby flesh and muscle may be maintained.

The weaning period may be passed through most successfully without any special pampering by the sensible precaution of letting the little fellow have about all the grain he will consume during the weeks preceding this critical period. Some horsemen advise using ground oats, while others recommend ground corn, but we have found that even whole, dry oats constitute a most excellent ration for the young colt.

It is not enough that the colt should simply share his mother's meal, a far better plan being the installing of his own little manger where he can have just such a ration of grain that will be cleaned up promptly three times a day. If there is a supply of bran at hand 25 per cent of the ration may be made up of this product, but, as said before, whole oats are in themselves a most excellent ration for the young colt.

Weaning time involves, as it were, two hardships on the young colt. In the first place changing from liquid to solid foods amounts almost to a shock to the system, and in the second place, it is a real calamity when the little fellow finds that he has to make his way in the world alone. In other words, the feeling of lonesomeness must be taken into consideration, because it affects health, growth and thrift more than we are first inclined to believe. A good, tight box stall where there can be little chance of injury is the best place to give the first lesson. If for a period of a week or ten days the colt can be allowed to suck, say three times a day, and if during the next week it is reduced to twice a day and the following week to once a day there will be practically no injurious results come from the lonesome feeding. In this connection, however, we would like to emphasize the importance of using plenty of good food with special reference to the necessity for supplementing the grain with a little clean, fresh clover hay. Second-growth clover is ideal for this purpose.

If perchance the colt has for his little master a sturdy farm boy the situation will work itself out ideally, because the boy always knows that a handful of oilmeal mixed up with the grain adds to the thrift and sleekness of the little fellow, and a boy always sees to it that there is a little salt-box in the corner of the stall. Furthermore there is no case on record yet where a boy has forgotten to keep his colt well supplied with fresh water.

SILAGE FROM DRY FODDER.

Numerous instances have been called to our attention where shocked fodder has been converted into good ensilage. It frequently happens that with but one silo on the farm there is sufficient live stock to consume much more roughage than the silo will hold at one filling. Where this is the case a considerable acreage of corn is usually put in the shock, this being fed out during the late winter and early spring months. Much disagreeable labor can be avoided if when the silo is empty the cutting outfit is again put in place and the silo refilled.

Where this plan is carried out plenty of water must be used. One instance has been called to our attention where a three-quarter inch hose has been allowed to run into the blower during the process of filling, this being followed up by saturating the whole mass from the top when the silo was filled.

We are firmly convinced that this plan of filling the silo with dry fodder during the winter months has been sufficiently tried out to justify its repetition by every man who has the fodder in the shock and who is in a position to command sufficient help to fill the silo the second time.

The purchase and operation of prison farms is one plan Herbert S. Hadley, former governor of Missouri, would recommend to supplant the contract convict labor now in vogue at the state penitentiary.

James M. Pierce

THE PUBLISHER'S VIEWS ON TOPICS of THE TIME

TWO KINDS OF PUBLIC SERVANTS.

THERE are two kinds of public servants: the one who finds out what is most popular with his constituents and acts and votes accordingly, and the one who has convictions of his own, fights for them unceasingly and unswervingly and swings the people around to his own way of thinking or goes down to defeat, battling for what he firmly believes is right. The first leads by skillfully following. The second leads so far in advance that often the people do not catch up with him until he has fallen in the fray.

Examples of both kinds of public service have come within my observation during the past year. The first was when the fight for and against Canadian reciprocity was on in the senate. Personally I exerted every possible effort to defeat the bill, circulating petitions, writing letters and editorials and doing everything in my power to prevent this injustice being foisted upon the American farmer. I was convinced (and still firmly believe) that such one-sided Canadian reciprocity as was proposed by President Taft was unfair and unjust to the American farmer. We needed votes in the senate to defeat the bill. And yet I cannot bring myself to admire the grain-belt senator who withheld his opinion on the great principle at stake until he saw how the wind was blowing back home and then publicly announced that he would vote against the bill, although he favored it personally and did not believe it would affect the grain-belt farmer materially one way or another. We needed that senator's vote, and yet when the fight was over I found myself respecting the man who voted in favor of the bill (because it represented his honest convictions) far more than I respected the man who voted against the bill because he found his political fortunes dependent upon such action.

An example of the second kind of public service was presented in the senate last week, when the tariff bill came up for final vote. The democratic ranks showed two desertions: members from Louisiana who knew that they would dig their political graves by voting for the free sugar proposition (Louisiana being a great sugar producing state) and so saved their own scalps by deserting the party ranks. The republican ranks likewise showed two desertions, but not the kind manifested by the Louisiana senators. An honorable senator from Washington (Miles Poindexter) and an honorable senator from Wisconsin (Robert LaFollette) voted in favor of the democratic tariff bill, because they believed the country had demanded revision downward by the overwhelming popular vote it gave Woodrow Wilson and because they believed the Underwood-Simmons tariff bill (imperfect as it undoubtedly and admittedly is) better than the existing Payne-Aldrich bill. Explaining his vote, Senator LaFollette frankly admitted that what he did was "a political sacrifice," but added that "that within me compelled me to vote for the bill." His statement was greeted by thunderous applause.

I do not think we need to consider the merits or demerits of the Underwood tariff bill to agree that Senator LaFollette did a brave thing and set an example which others might well follow. What we need are more lawmakers who vote according to their honest convictions and for the good of the nation as a whole, regardless of how the political winds are blowing and of how certain measures will affect their home sections rather than the entire country. We may or may not be admirers of the men themselves; we cannot honestly withhold approval of a patriotic courage which puts public service above individual fortunes.

CHEAPNESS VS. EFFICIENCY.

I CAME to the conclusion long ago that it does not always pay to buy cheap things, particularly in this day when the unscrupulous are adulterating almost everything we eat or use. Take as common a thing as the shoes we wear. The ordinary man, such as you and I, cannot see much difference between a two-dollar pair of shoes and a four-dollar pair. One is just as easy on the feet, just as shiny and apparently just as durable as the other. Yet the chances are nine out of ten that the sole of the two-dollar shoe will wear out twice as quickly as the sole of the four-dollar shoe. Why is it? I did not know the reason until I found it in a Department of Agriculture report the other day. The cheap sole is adulterated, with nothing more nor less than epsom salts and glucose. I'll warrant that the average farmer has no idea of the fact that twelve million pounds of epsom salts and glucose are used as shoe-sole adulterants every year in America. We think we are walking around on cowhide, when in reality we are walking around on a mixture of poor leather, brown paper, epsom salts and glucose. It is to the everlasting credit of Kansas that it put a bill through the last legislature preventing the further sale of such adulterated shoes. The Kansas "pure-food" shoe law might well be adopted by every other state.

It took me a good many years to learn that economy is not always efficiency; or, rather, that by buying cheap things I was not always saving money. But slow as I was in learning this, I was no slower than some of the men, with great reputations as financial experts, who are running the affairs of some of our big corporations. Take the railroads, for instance. You and I can easily remember how the railroads fought against the air brake, that wonderful invention which has saved thousands of human lives and minimized accidents as perhaps no one other invention has done. It required strict laws compelling its adoption, within a certain time, before the air brake came into general use. And even then the railroads fought the orders and laws from court to court, pleading for a postponement of time, urging poverty and offering all manner of excuses. Today there is not a railroad that would go back to the old hand-brake days, with their slow speed, their hard labor and their numerous accidents.

I shall never forget the first time I rode on a passenger train. It was back in 1855 or '56, I do not remember exactly which. I was then a boy of seven, and the impression left on my mind is very distinct today. The road was in central Ohio, a part of the big Pennsylvania system of today. Wood was used as fuel, every two or three miles a few cords being piled alongside the track, available if the engine supply gave out. The brakeman was a very important and busy person in those days. When the engine whistled for a station, the brakeman rushed down the car aisle, flung open the door, grabbed the brake wheel and turned it vigorously until the brakes were applied. Then he rushed frantically through the car, to the other end, going through the same laborious performance, until finally, and slowly, the train came to a crunching stop. Just contrast that laborious hand performance with the ease, safety and quickness with which the brakes are applied, by the engineer in the cab, by means of air today.

It seems to me that the time is coming when an equally striking contrast can be made in regard to the rolling stock which most of our railroads furnish to their patrons. Two big wrecks, in the east, shocked the country a few days ago. One occurred on a line which uses only steel cars, and although a half dozen coaches were thrown from the track and the wreck was a bad one, not a single life was lost. The other occurred on a line which uses the old-style wooden coach and thinks of nothing but the dividends to the stockholders, fighting every move for improvement. The accident was no worse than the other one I have just spoken of, yet twenty-one lives were lost. The contrast was so striking that the congressman who is chairman of the safety appliances sub-committee of the Interstate Commerce Committee of the house is drafting a bill compelling every railroad to abolish every wooden coach and supplant them with steel coaches within the next five years. Of course, the railroads will fight the bill, just as they did the air-brake laws of the various states. But isn't it false economy to go on paying immense personal injury damages, as a result of frequent wrecks, when accidents could be minimized and human life safeguarded by just such a precaution as the proposed law imposes?

Do you know what the railroads will say the first thing? They will say that the people themselves are to blame. Why? Because the people are everywhere demanding lower rates of fare. The railroads might not (possibly would not) use their larger profits to improve their rolling stock, but they will use low fare as an excuse. And so we are back to the starting point: cheapness versus efficiency. Since many of the grain-belt states have gotten a two-cent-a-mile law the service on a number of the railroads has become perfectly abominable. Take the case of state-fair traffic for instance. A good friend of mine came into town during state-fair week on a train not a single coach of which had a drop of drinking water. Another one came in on a train so crowded that women and children were compelled to stand in the aisles. Another one came in on a train with unsanitary and positively filthy toilet accommodations. The railroads, when called to task, come back with the reply: "You forced cheap fare on us; now take cheap accommodations." Even their eleventh-hour promises of improvement, every time a wreck startles the people into activity, have a way of being forgotten or ignored, after the excitement has subsided. It was this that caused a newspaper poet to write:

There was a little road, and it had a lot of stock
And its sleeping cars were made of wood, wood, wood,
And every time a train mixed a signal on the block
The railroad promised to be good, good, good.

This whole question is one which you and I can't settle offhand. But the point is just this: there is something else to be considered always than cheapness. We have learned our lesson with the cheap shoes and will never buy another pair. Let's learn our lesson with the cheap railroad fare and the next time we dictate terms to the railroads compel them to give us accommodations fit for human beings and safeguarding human life. When we have gone this far perhaps the financial geniuses who control the big corporations of this country will likewise have seen a great light, and will learn that in the spending of millions, just as in the spending of hundreds, a dollar saved in the first place is not always saved in the long run.

James M. Pierce

Where Accuracy Is a Big Factor!

Gone are the days of haphazard Farm methods. Now farms are run on definite schedule. Moments are golden. Each farm is a big manufacturing plant. Its employees, its machinery, the soil itself—all are crowded to fullest capacity. The saving of each moment counts in lowering production costs.

The farmer, *more than the city business man*, needs an accurate and dependable watch.

Your city man can better afford a make-shift. He is only a block away from the repair shop. And he lives and works where public clocks face him on every hand. So, when his watch goes wrong, he suffers only slight inconvenience.

The farmer, on the other hand, is miles away from the watch doctor. Unless he bought it from a reputable jeweler and had it then and there *expertly regulated to his personal requirements*—his watch is going to run fast or slow. For regulation or repairs he must take it or send it in—and wait!

The "South Bend" Watch

absolutely insures you against watch troubles.

First, because of the way it's *made*. Second, because of the way it's *sold*.

We take six full months to build it. Then it must run 700 hours on trial and it is inspected 411 times in the making. Finally, it must keep perfect time in a refrigerator and then in an electric oven. Then, and then only, it is ready for you. No condition to which *your* habits and environments can subject it can more severely test its "staying" qualities.

Having produced, in the SOUTH BEND, the Master Time-piece, our next responsibility is to deliver it as such to you. This we could not do if we permitted the SOUTH BEND to be sold by mail.

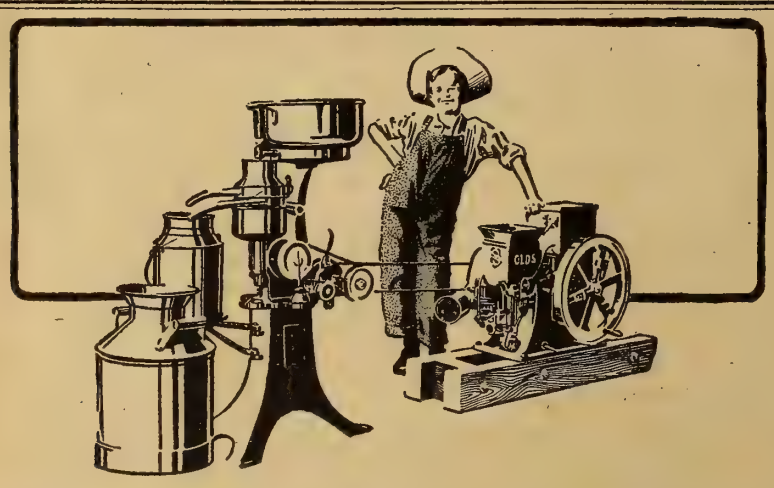
Sold Only by Jewelers

For only a jeweler—and a very expert one at that—can properly regulate it to your person. So we have *picked* 15,083 jewelers in the large cities and the small villages of the United States to sell SOUTH BEND Watches. Each of the 15,083 knows this famous ice-proof, furnace-proof watch from A to Z. Each is an expert in watch regulation.

You can rely upon it that any SOUTH BEND Watch sold to you by any SOUTH BEND dealer will give life-time satisfaction and service. This much—and more—we guarantee.

Look up your SOUTH BEND dealer. Have him show you different SOUTH BEND models. Meanwhile, write us and get our free book, "HOW AND WHERE to select a GOOD WATCH."

THE SOUTH BEND WATCH CO., 9 Ironton St. SOUTH BEND, IND.



Paying Engine Combinations

We've made it easy to pick out your engine and the machines that you'll run with it. We have most of the machines you'll need, in sizes to fit your engine—and we have just the size of engine you'll need, from 1½ to 35 horsepower, gasoline or kerosene. Consider these suggestions—then ask our dealer to make up a complete outfit for you. Just for example:

Size of Engine	*Machines*
1½ h.p. up	Rumely Pressure Pump Rumely Pump Jack Dynamo, Saw, Etc.
3 h.p. up	Rumely Saw-Rig Rumely Grain Dump
3-5 h.p.	Rumely Sheller No. 2
6 h.p.	Rumely Baler, Junior
4½ h.p. up	Rumely Feed Mill
8 h.p.	Rumely Baler—Standard
6-10 h.p.	Rumely Sheller No. 4B
15-35 h.p.	Rumely Silage Cutter
Also Bigger Engines	Bigger Rumely Machines

Send for "The All-Round Power Plant". Ask our dealer in your town for the GasPull Data-Book, or the Olds Engine Data-Book, or a special book on each other machine.

RUMELY PRODUCTS CO.
(Incorporated)
Power-Farming Machinery

Des Moines
Lincoln
Cedar Rapids
Chicago

Tractor Combinations too, a GasPull or OilPull Tractor, 15 drawbar, 30 belt horsepower, with Rumely Corn Sheller, Advance Husker-Shredder, Rumely Hay Baler, Advance Silage Cutter.

This boy could learn to run our tractors. So could you.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Cattle and horses should not run together and be shut in the same small corral together. It may be all right to pasture them together, but in the corral, particularly during the cold weather, one is liable to hurt the other. Horses will run the cattle and cattle may hook the horses.

Although the long drouth was ended too late to be of benefit to the 1913 crop throughout southwestern states, the rain they have been getting there of late makes everyone feel better.

I like to sow small grain in the fall as early as it is safe to do so. If it has time to establish a good root system it stands a better chance of living through the winter, and if it makes too much growth above the ground I have stock that will eat that off.

Soon be cool enough so cotton gloves come handy when working at the chores. I buy them in dozen lots, but it seems they do not last as long as they once did. Those made at home, out of good quality cloth, last much longer, but the labor of making by hand amounts to more than the entire cost of the factory product.

It has always seemed to me that the man who produces an article should have first choice for his own use. Going on this theory, I take first pick of the bunch of shoats for my own meat. A fancy corn-fed steer, however, is going to be almost too rich for most of us, this winter, though.

The consolidation of schools works out under certain circumstances, but I am not of the opinion that the large-sized country school needs consolidation. In my district there are fifty scholars, and while all of school age do not attend, there are enough to make a good-sized school, the teacher is doing excellent work, and I cannot see where anything would be gained by consolidation with other districts.

It is a mistake to begin shredding corn too early. Let the fodder cure thoroughly and then do not underestimate the damage that dampness at the time of shredding may do. Shred fodder when it is dry.

A post that is well set may last longer than one which has been made smaller by sharpening so as to drive it easily, but it is seldom as solid as the driven post. When the soil is water-soaked the set post is more easily leaned by stock pushing on the fence.

The feeding of snapped corn is more or less of a nuisance, but when the corn is still too green to husk easily I sometimes snap a few loads for the hogs. Husks soon fill the feeding place and blow about the yards.

Hogging down corn is something that is all right when done in a reasonable way, but the herd should not have the run of a greater acreage at once than they can clean up in a few weeks or there will be waste in half-eaten ears rotting on the ground. It makes soil richer to let hogs eat corn where it grew in the field.

Planting an orchard or a windbreak is only the first step just the same as planting a field to corn is the first step toward a corn crop. The care that each receives after planting will show when the goal is reached in either case.

There are several good makes of hand separators and no one can be sure of getting the very best, but with this as with all other machines it is well to see that the maker's name is backed up with reputation of long standing. A hand separator that does poor work creates a "leak" that no one can afford.

It is a mistake to wait for any particular "seed-corn day." Your seed corn day and mine is any day that we can go into the field and gather the corn and take care of it. Those who have never gathered their seed in the fall should try it this year. It beats the old and easier way. The good old times of long ago may bring up pleasant memories, but the old methods of farming must give way to the new.

The low wagon and the low rack are "the thing" for hauling corn to the silo. Lifting bundles of green corn all day will take the keen edge off any silo enthusiast.

Running the corn binder as high as possible makes easier work of shocking and handling the fodder without much loss of feed, but it makes harder work for the horses. In cutting for the silo the "stump" can go with the rest.

Beware of the stranger who comes to you with a cocksure scheme whereby you are to make some easy money. It is a hundred-to-one shot that you have the money in your pocket and that he is working a scheme to make your money easy for him. Easy money never needs to go begging to find takers.

Throwing corn into the mud for the hogs is out of the question with us at the present because there is no mud. Throwing corn into deep dust is but very little better. Do everything possible to keep hogs thrifty without doping.

The high price of hay is causing everyone to think twice before feeding so much that there is enough left in the mangers for bedding.

No one owning a gasoline engine that runs with batteries can afford to be without a tester. The only way to get full power with gasoline is to ignite it with a strong spark.

DIGGING AND STORING POTATOES.

To the Editor of The Homestead:

Potatoes should be dug when the ground is dry; then the tubers will be comparatively free from dirt. The cleaner and drier the potatoes at digging time the better will be their keeping qualities.

We never practice the plan of allowing potatoes to lie in the sun for any length of time, but pick them up and carry them to a cool, shady place, where they are spread out and cooled as soon as possible. It is important that careful handling be employed, as the tender skin is easily broken, causing the tubers to decay. One decayed potato is liable to cause the loss of many others by coming in contact with those lying next to it.

We do not recommend too early digging of potatoes, as we know from experience that they will not keep so well if dug while the weather is hot. Some years ago we raised a fine crop of potatoes of the White Star variety. These were dug the last day in August and hauled direct to an old house on the farm, where they were scattered out thinly over the floor in order that the air might circulate freely among them. In a few days we went back to examine our potatoes and half of them were already rotten. Hence our objection to too early digging. Since then we have invariably dug our crop of potatoes later in the season, usually the last of September or the first of October, owing to the condition of the ground. Potatoes are sensitive to cold and a slight frosting ruins them, hence they should be stored before freezing weather.

We have kept them in pits and in cellars, but we prefer a dry, well-ventilated cellar rather than pits. If covered deeply enough to withstand any sort of weather that may come they sprout badly while if covered lightly there is danger of freezing. On the whole, we think the cellar the best for storing potatoes and the labor is less than if stored in pits.

J. T. McCoy.

A method of producing potassium fertilizer by treating in the electric furnace feldspar or other minerals containing potassium, with a suitable proportion of carbon and iron, has been invented by a Swedish electrochemist.

CURRENT EVENTS

THE Mexican situation is clearing. During the past week President Huerta sent a message to the Mexican congress in which he promised to spare no effort to bring about the unrestricted election of president and vice president next month, declaring that it would constitute the greatest triumph of his career to turn over the office to his successor with the country at peace, as he hoped to do. His message was so conservative and conciliatory in tone that it meets most of the demands made by President Wilson, through ex-Governor Lind, of Minnesota, and goes a long ways toward re-establishing friendly relations between the two countries. At the same time, President Huerta shows that he continues to believe the American people are not back of President Wilson in his Mexican demands, saying "the tenseness of our diplomatic relations with the government of the United States of America, although luckily not with the people," had put Mexico into a state of apprehension. It is confidently expected that Huerta will realize that President Wilson has the rank and file of the American people back of him to the extent of meeting Wilson's demands and resigning before the election, if he intends to be a candidate to succeed himself. Should he do this and should the election be held regularly and legally, there will then remain no reason why the United States should not send an ambassador to Mexico City and friendly relations between the two governments be again established.

THE impeachment trial of Governor Sulzer, of New York, is now in progress before the upper house of the state legislature. Governor Sulzer is charged with having diverted public campaign funds to his private use and having gambled on Wall Street at a time that he was publicly declaring against such action on the part of others. While these are the public charges against him, it is quite generally recognized that his trial is more the effort of the powerful democratic organization, Tammany Hall, to unseat him because of the fact that although elected as a Tammany democrat Sulzer has since refused to obey Tammany dictates and has even fought the organization. Tammany Hall has a way of getting even with, or rid of, its enemies, hence the charges brought against the governor, in which politics play an important part. An outside view of Sulzer is about sufficient to convince anyone that he is somewhat of a demagogue. However, since assuming office at Albany, he has been devoting himself to the cause of popular reform and has attempted to compel the legislature to enact a capable primary law, in order to increase the powers of the people. The sympathy of the state is largely with the governor, although the outcome of the trial in the senate at Albany is extremely doubtful.

WITH the tariff revision bill passed by both the house and the senate, congress has settled down to work upon the currency bill. Some difference of opinion exists as to whether President Wilson will be able to impress his currency views upon congress as successfully as he did his tariff views. Bankers and financial leaders differ in their opinion of the Glass-Owen currency bill, some opposing it bitterly and others declaring that it will give the relief necessary and provide a more elastic currency. President Wilson has already sent a message to congress declaring that a revision of the currency must necessarily follow a revision of the tariff in order to make it easier for business to meet the changed conditions. It is known that the president is insistent upon currency legislation at this session, rather than have a postponement to the regular session which convenes in December, and as he has a way of winning out on most things that he sets himself to, the belief is gaining ground that he will get what he wants in this matter. As a result congress will probably be in session almost continuously until Thanksgiving, unless a compromise can be effected on the currency problem in the near future.

ONE of the peculiarly picturesque products of America politics died during the past week, "Big Tim" Sullivan, Tammany congressman. A product of the Bowery slums of New York City, Mr. Sullivan died possessed of more than a million dollars, notwithstanding which his body lay unclaimed and unrecognized in the New York morgue for almost two weeks. Suffering in recent years from an unbalanced mind, Sullivan wandered from his nurses and was killed by a train, his body about to be interred in the potter's field when it was recognized and given elaborate burial by his thousands of New York friends. Mr. Sullivan had served several terms in the New York legislature and three terms in the United States congress, although he never felt himself at home or was the political power at Washington that he was in Albany. Amassing a fortune through shrewd race track and theatrical investments, he proved to be a real friend of the poor man throughout his entire career. One of his pet benefactions was an annual Christmas dinner, served to thousands upon thousands of poor folks in New York, no card of admission or any requirements being necessary, and every diner being given whatever clothing he needed, in addition to a big square meal, a pair of shoes, hat, clothing or whatever the need might be. This benefaction cost Sullivan a large sum of money, but it was never begrudged. He was kept in office by the vote of the poverty-stricken sections of New York and he remained faithful to his constituents, thus setting an example in his peculiar way that might well be followed by others representing a much higher class of people.

SELECT SEED CORN EARLY.

To the Editor of The Homestead:

The greatest factor in reducing our corn yield is poor seed. And poor seed is the result of careless methods and lack of attention. The great loss to our principal money crop can be easily avoided by only a little extra care and attention without the necessity of much labor and without any extra expense.

Every farm should be supplied with seed corn picked from the field before October 1st. Statistics show that corn gathered on that date contains about 45 per cent of moisture and hence a frost at that time will result in a lower vitality in a very large per cent of the

THE FIRST "SEED" EAR.

corn standing in the field. On the average only about 87 per cent of our corn shows a strong germination and there have been seasons when the vitality of the corn was so poor that seed corn was not to be had at any price. Why

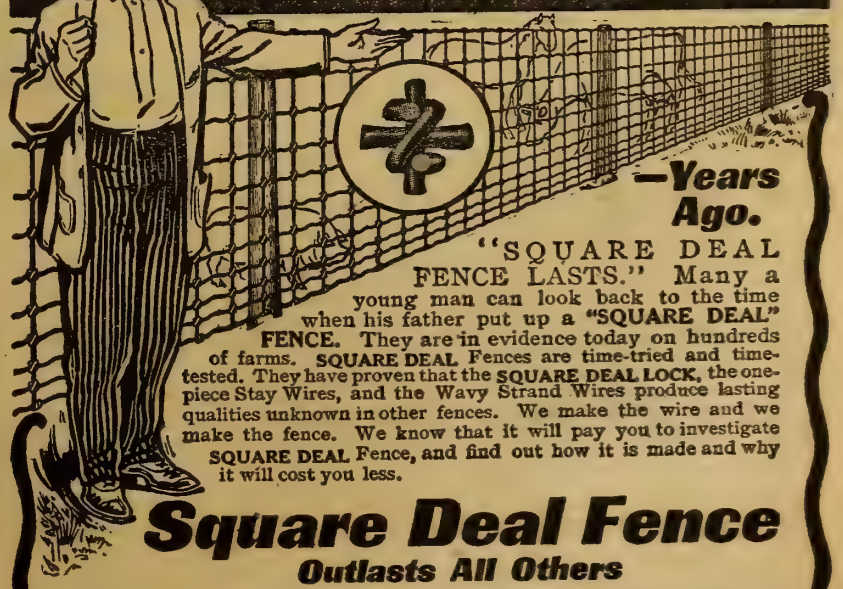
"My Father Put Up That Fence"



—Years Ago.

"SQUARE DEAL FENCE LASTS." Many a young man can look back to the time when his father put up a "SQUARE DEAL" FENCE. They are in evidence today on hundreds of farms. SQUARE DEAL Fences are time-tried and time-tested. They have proven that the SQUARE DEAL LOCK, the one-piece Stay Wires, and the Wavy Strand Wires produce lasting qualities unknown in other fences. We make the wire and we make the fence. We know that it will pay you to investigate SQUARE DEAL Fence, and find out how it is made and why it will cost you less.

Square Deal Fence

Outlasts All Others

—because of its unusual construction. The SQUARE DEAL Lock grips the stay wires above and below each strand wire. The wavy strand wires keep the fence trim and tight summer or winter. The Stay Wires prevent sagging or bagging. They cannot spread. Hogs or pigs cannot lift SQUARE DEAL Fence and crawl under. Any sudden pressure or impact is distributed over a large surface. Knots are smooth and cannot hold water or gather rust. In every rod of SQUARE DEAL Fence there are 33 up-right stay wires six inches apart, extending from top to bottom of fence and each stay wire acts as a post. Costs less for posts. Fence lasts much longer, looks better. Stock cannot break through or get under.

FREE—To every farmer or land owner who wants to learn more about SQUARE DEAL Fence, we will send our SQUARE DEAL catalog and dealer's name and ROPP'S NEW CALCULATOR—worth its weight in gold FREE. Ropp's Calculator will give you the answer to any business problem that arises on the farm. Full of information that will interest. Write today for these free books.

Stud Anchor. For barns, corn cribs, garages, using **concrete** wall, pier or floor. No sills needed, nothing to rot. Studs bolted to foundation.
Stud Anchor Works, Mendota, Ill.

take such risk? Even under average conditions seed corn properly picked and stored would easily add five bushels to the yield of every acre. Indeed a test of 5,072 samples of corn taken from the farmer's planter boxes and planted side by side on the county demonstration farms, shows that the good seed corn yielded eleven bushels more than the average of all the samples.

In selecting corn from the field it will be convenient to use a grain sack, tying it so it can be suspended from the shoulder. The corn can then be carried to the end of the row, emptied on the ground and later gathered up in a wagon. Corn should not be allowed to lie on the ground over night nor piled on the floor nor in ricks. It should be hung up in a dry, well-ventilated place. A dry, well-ventilated cellar or furnace room is best, but a dry attic, spare room, shed or crib or any dry, well-ventilated building will do. Avoid such places as a stable over or near stock, over oats or corn, damp cellar, closed attic, over kitchen or in the sunshine.

Corn is our most important crop. Its yield and profits can be easily increased by

1. Selecting seed from the field before October 1st.
2. Saving at least twice as much seed as needed.
3. Hanging the seed up in a dry, well-ventilated place, so that the ears will not touch each other.

H. A. Burger.

WHEN PLOWING BECOMES AN ART.

(Continued from page 3)

verizes the soil. Many a plowman was eager to point out the advantage of this type of moldboard over the old-fashioned board which "throws" the furrow. This plow is after all but a logical result of these Wheatland and Big Rock contests because what is "good plowing" among these experts must be a pattern for farmers to fashion after. Mr. Patterson's views on this phase of plowing are of interest: "I feel," said he, "that these contests have in a way affected the welfare of more farmers in the United States than has any educational institution in this or in any other state. We have demonstrated to the manufacturers the type of plow that most nearly meets our requirements and in their endeavors to meet these requirements they have placed on the market, and therefore within the reach of every farmer in the United States, the kind of plow that we have demonstrated to be most useful. Those companies that refuse to come up to our standard must take a back seat ultimately or get into line and meet the real needs of the real farmers. In this way you can therefore see that the whole system of plowing matches as it is carried out here and at Big Rock is primarily educational, affecting more immediately the people in this vicinity, but reaching in its beneficent influence all classes of farmers in and without the state."

Nine tractors competed for the silver cup in the tractor class. The outfits varied in size from the three to the ten bottom plows. In this class the silver cup was won by the J. I. Case Company, with a six-bottom kerosene-gasoline outfit. Other entries in this class included a three, a four, a five and a ten-bottom outfit, respectively, from the International Harvester Company; a six-bottom plow from the Joliet Oil Pull Machine Company; a five-bottom plow from the M. Rumely Company and a ten-bottom Aultman & Taylor outfit manufactured by the Parlin Orendorff Company.

It is an agricultural event of more than passing interest when 8,000 people assemble on one farm for any purpose whatsoever. In this case, the work of the plowmen was the main center of interest, but attention should be called to the domestic science contests conducted under tent by the ladies of Wheatland, DuPage, Oswego and Naperville townships. Cash premiums were awarded on a multitudinous list of household articles. An endless variety of sewing exhibits were submitted to the committee of judges, while in the classes for breads, cakes, pies, etc., the number of entries was sufficient to present an almost herculean task to the committee of judges. In addition there were classes for grain, fruit and vegetables. In this way the program carried out upon this occasion interested every member of the farm household. If in the plowing classes skill was displayed that possibly could be matched by no other set of plowmen outside of the Wheatland district, so must it be conceded that in the articles of food and needlework displayed on this occasion there was an equal indication of deftness and skill.

In every respect this was an ideal gathering of farm people. There were no sideshows to furnish mock entertainment, such as are often found at some of our fairs and expositions, and the bark of no venders of shoddy goods disturbed the serenity of a most pleasurable occasion, the immediate and far-reaching results of which can hardly be overestimated.

DISBUDDING CHRYSANTHEMUMS.

To the Editor of The Homestead:

Have you noticed how like weeds your fancy chrysanthemums become after a few years in the garden? There is a reason for it, and the chrysanthemum is not really to blame for it.

Those magnificent blooms we see so often are the result of years of careful growing and selection of the parent stock. They did not happen. A few years' neglect can undo all this and leave your choice chrysanthemum just where the propagator began his work of development years before, little better than a wayside weed.

In the first place well developed flowers cannot be grown in clumps. A single strong plant is required. In the second place a good flower cannot be grown in clusters on the same branch. Florists for their cut flower trade grow just one stalk to the plant and one flower to the stalk, so for each flower they have to grow a plant. They set these plans about eight inches apart in beds, pinch off all side branches, support the long, slender stalk, holding it straight up, and pinch out all but one bud. They try to keep the plant in a thrifty condition so the foliage will remain green and fresh until the flower is fully developed. This single stem method is not practical for pots and not necessary, for fine flowers can be grown and a couple of dozen produced on the one plant. I have produced them often. The finest flowers I ever saw were grown by an amateur and there were twenty-four of them on the plant, which had been grown to perfect tree form. This plant took the first prize when there were twenty or thirty plants exhibited by florists in the collection. The plants were put up at auction and sold to the highest bidder and this one brought nearly four dollars, which was a high price in that small country city of three thousand. Anybody can do as well, for the grower had not one facility that is not common to everyone.

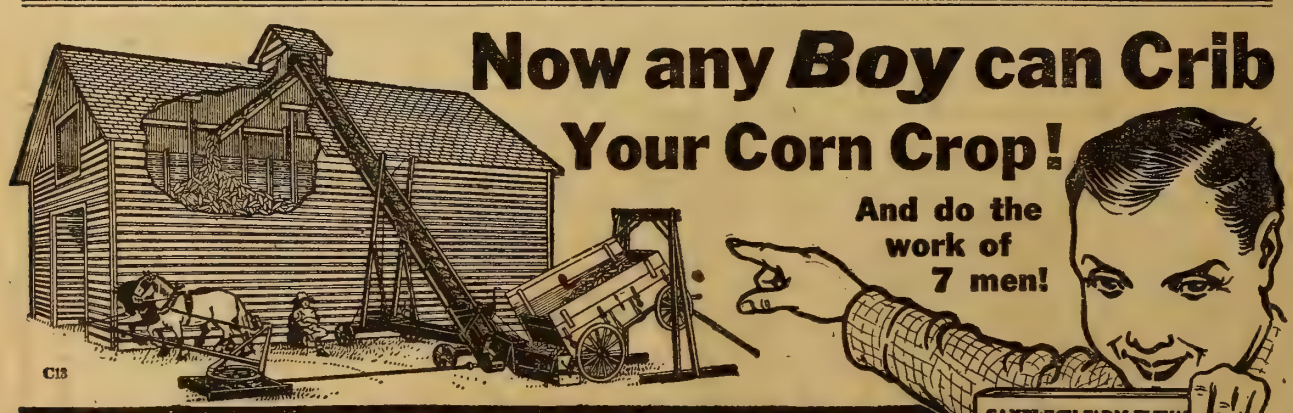
You cannot have these fine flowers without paying the price in care, but it is not a serious proposition at all. When branches begin to appear, pinch out all side shoots except those you wish to keep, and when they begin to bud rub out all but the central bud of the cluster. The first buds to appear will have a peculiar ridged appearance, and will be borne on rather long stems bare of foliage down to where they join the main stalk, which usually branches at its base. These buds should be pinched out, as they will seldom develop good flowers in the hands of an amateur. Cut them out right down where they join the main stem and select one of the side branches for your flower stem. This stem will have foliage to the tip, and a cluster of buds will appear. Do not try to remove the surpuls buds until you can do so without danger of destroying the center one, for this cluster of buds is all that will grow on this stem unless you get a side branch grow.

Your plants should be lifted and potted just as soon as the first buds show, so the bloom will not be checked in its development, as any check is likely to cause them to come partially single. August is about the right time to pot up, and the potting soil should be rich, for the chrysanthemum is a gross feeder. Water freely, and give a good dose of liquid manure about once a week.

Frost will ruin the tender petals of the better varieties, so you must protect them some if you leave them out doors. They should have all the light possible, and be kept where the wind cannot break off their brittle branches, for one broken branch will ruin the appearance of your plant if it has been grown symmetrical.

Chrysanthemums are so easy to propagate, grow so quickly and easily, have almost no insect enemies, have such magnificent flowers, such varied and delicate colors, and are so generally popular that every garden should have a collection. Get the incurve varieties for your main planting, for they will give you the most satisfaction under ordinary conditions, and are really the prettiest. The large, loose, reflex varieties have a ragged appearance, that, when well grown, is beautiful, but is unkempt unless grown almost to perfection. The little pompom varieties are becoming very popular, and they deserve it, for they are perfectly hardy, both plants and flowers standing some frost in the fall, and the roots seldom ever freezing out. They can be had in all colors, as double as flowers can be, and need no trimming or disbudding. No garden is complete without several clumps of these.

L. H. Cobb.



Sandwich Eternal Cypress Farm Elevator Rids Farm Life of Drudgery

Gone are the days when farmers looked forward to corn husking with **dread**—days when they hunted high and low for **help**—days of **back-breaking labor** shoveling corn into cribs—nights of soreness and pain. How **hard** to get men—how **costly** too! And how they grumbled at **scooping**—how they ate up the **profits** and wore out the women folks keeping them fed.

All This Changed by the Sandwich

A few years ago people would have scoffed at the idea that one boy could crib as much as 7 men.

But nowadays near 15,000 progressive corn raisers own Sandwich Farm Elevators and prove it! See this—

"My 11-year old boy runs my Sandwich Elevator as well as I can," writes John F. Heiken, Palmyra, Ill. "My children husk nearly all my corn."

Pays Its Way—Works Like Lightning!

The Sandwich comes with Swivel Spout or overhead roof conveyor. And it puts your corn—your small grain—into the farthermost corners—lickety split!

"Unloaded 50 bu. in 4 minutes," writes I. E. Orendorf, Heyworth, Ill. Others crib 40 bu. in 2½ minutes, dead easy.

C. H. Keller of Marshall, Minn. writes:—"**Had my crop picked 1c a bu. less on account of my Elevator.**" Yes, huskers work **cheaper** where the Sandwich does the cribbing.

No Leg Breaking Platform

The Sandwich Wagon-Jack is overhead. "Works to perfection," says A. J. Anderson, Boone, Iowa. You drive right under—with even the **tallest** load. And it dumps it in the hopper in a jiffy. Then hitch on **any power**—horse or engine—and your corn pours into the crib like magic.

Cypress Body Outlasts Steel!

We make less money using the Cypress, "The Wood Eternal," but we make more **friends** and more **sales**. This is why it is called the **Everlasting** Sandwich and is fast crowding cheap pine, poplar and all-steel Elevators from the market.

Warning—60 Carloads Oversold

Late orders for sixty carloads of Elevators we could not supply last fall. They came from farmers who **waited**. They had to shovel. But they couldn't blame **us**. For we warned them early as we are **warning you now**. Few dealers ever order **enough** ahead to supply you all. You'll have to do **your own** ordering and do it **now**.

Get This Free Book —See the Sandwich Too!

Write us today for our brand new Elevator Catalog and the name of our nearest dealer who'll show you the Sandwich Elevator.

This book pictures the Sandwich Elevator and tells all about it. It gives you the inside facts on Elevator Construction, the things to beware of—the points to insist on. And it gives you the measurements of Cribs and Graneries—you'll want these if you ever build. Address without fail

Farming for Fertility and Profit

By Geo. H. Dacy

ONE of the most successful breeders of Short-horns in Missouri is Mr. S. P. Emmons, of Mexico. For over thirty years this Missourian has been engaged in the Short-horn business and during that time he has bred and raised many excellent animals. Long Branch, a six hundred acre farm owned by Mr. Emmons, usually maintains a herd of from seventy-five to 100 pure bred Short-horns as well as fifty to 100 pure-bred and grade Duroc Jersey swine. Steers are also fed on this farm as a sideline operation, the animals being of value as fertility-replenishers as well as providing a means for the economical and profitable marketing of the home grown grain and roughage.

From the fertility standpoint alone the Emmons farm is a pacemaker for its locality. In consequence of the efficient conservation of the stable manure the crop yields and the productivity of the fields are constantly on the upgrade. As far as possible the live stock are managed under natural conditions on this farm. The cattle rough it on pasture the year round with the hogs as their running mates. By rotating the animals between the different pastures good grazing is provided for eight months in the year while the animals uniformly distribute their droppings over the various fields thereby increasing the resources of the soil in plant food. About 400 tons of additional manure are also annually hauled from the barn to the fields. Practically all the crops that are grown are fed directly on the farm, the resultant fertilizer being returned to the fields. Quite a bit of oil meal, bran, cottonseed meal and other concentrates are purchased and fed and in this way boughten fertility is brought to the farm.

Mr. Emmons is practicing a permanent system of agriculture that is making for the improvement of his land and his finances at the same time. Too many farmers neglect to play square with Mother Earth while they devote an excess of attention to increasing their bank accounts. However, the far-sighted countryman who has an eye to the future as well as the present improves his farm as he goes along. Increased capacity for bumper crop production spells a material advance in the acreage value of the land. Such results as those attained on the Emmons farm conclusively show that the progressive farmer who practices intelligent crop production and live stock husbandry can readily improve the fertility and productiveness of his soil without the use of costly, commercial fertilizers. "Home grow as much as possible of the grain and roughage that you feed on the farm," should be the motto on every up-to-the-minute farm of the twentieth century.

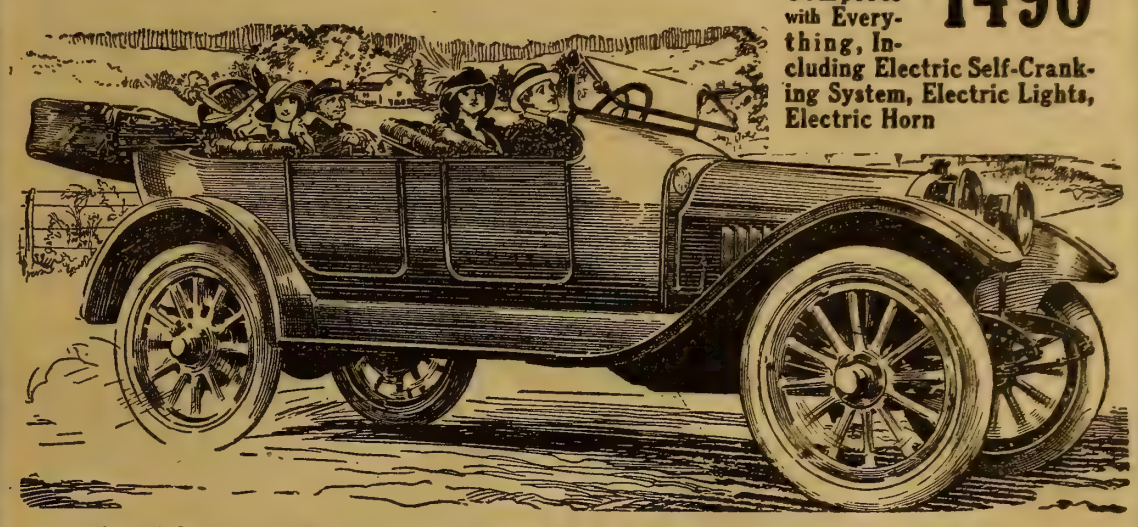
Approximately one-half of Long Branch Farm is in blue grass and timothy and clover meadow, while the rest of the acreage is sown to tilled crops. Annually 100 acres of corn are grown, from forty to fifty acres of clover, fifty acres of oats, from forty to fifty acres of wheat, fifteen acres of sorghum, fifteen acres of cowpeas, and smaller amounts of truck and garden crops for use on the home table. In the neighborhood of 300 tons of silage are fed each year, this succulent roughage being of inestimable value in the cattle rations. Mr. Emmons favors a combination silage composed of cowpeas and corn or sorghum. Such a mixture provides a near-balanced ration which contains about the correct proportion of fat, protein and carbohydrates. A combination of one part of cowpeas to three parts of corn or sorghum is best.

Where a uniform stand of corn is possible the preferable method is to plant the cowpeas directly in the row between the hills of corn so that the pea vines may grow up the corn stalks. Such a stand favors easy harvesting operations. Where a uniform stand is not secured difficulty is met with in harvesting the double crop, as the cowpea vines that grow along the ground tend to clog up the harvesting machine. Some farmers obtain good results by cropping the cowpeas or soy beans (which are also rich in protein and are suitable for such double cropping operations) in one field and the corn in another and then harvesting the two crops at the same time, so that they may be fed into the silage cutting machine in the correct proportion to form the desired mixture of ensilage. The great value of a combination ensilage for feeding beef cattle, dairy cows, sheep, horses and mules should win for this double crop an important position in the cropping campaign of every feeding farm, be it large or small. The cowpeas or soy beans, being leguminous crops, also materially improve the fertility of the fields on which they are grown. They can directly take atmospheric nitrogen and fix it in a readily available nitrate form for use by the plant roots in consequence of the activity of certain bacteria that operate in nodular growths on the roots of these legumes.

The Emmons Short-horns were originally of the Bates type. For a score of years Mr. Emmons bred and raised animals of this character, beginning operations in 1882 with a pure-bred foundation herd of one male and eight females. Some years ago when the Bates variety of Short-horns declined in popularity in the United States this breeder disposed of his herd and began a new herd of Scotch Short-horns of the Cruickshank-Marr-Duthie sort. In his breeding work Mr. Emmons has not been handicapped by a lack of working capital. It always takes time and money to develop a good breeding herd that will ultimately pay attractive dividends. The Long Branch herd of recent years has reached the stage of handsome annual returns. About fifty head of pure-bred breeding animals are sold each year, the cattle being sold as bull calves and heifers, as labor is minimized by disposing of the youngsters as yearlings. At the recent twenty-sixth annual sale forty calves were sold at an average price of $125 per animal. Although the prices were not high the stock, nevertheless, returned a tidy income to the farm.

The feature of particular interest on

(Concluded on page 13.)



Equipment Complete with Everything, Including Electric Self-Cranking System, Electric Lights, Electric Horn $1490

This Big, Handsome Car —1914's Startling Value

You Can Now Own a High Grade Car at a Modest Price. Because This Year We Have Gone Farther in Value-Giving Than Any Other Maker. Each Year Some Manufacturer Surprises the Automobile Industry with a Value That Outstrips All Others. It Is the Year's *STARTLING* Car. The Industry Calls It the "Season's Best Buy."

THAT honor for 1914 has been captured by the New Auburn "40." It is the automobile industry's masterpiece in value. Weigh this fact—here is a big, beautiful car of 120-inch wheel base, fully equipped with every comfort, convenience and feature, selling at the unprecedented price of $1490!

Is not this 1914's surprise in values? There is nothing high priced cars can give you that you do not get in your ownership of the remarkable

New Auburn "40"

Farmers are shrewd buyers. For that reason, this car will appeal to you as the "season's best buy."

Observe This Striking Beauty

Here is a car which your family will be truly proud to ride in.

Note, in this new car, the handsome sweep of the "stream" lines.

Note how they slope from the radiator to the back of the car. See the graceful sweep of the cowl, how it rakishly slants from the hood to the base of the windshield. Please observe also how the flush-sides and broad back of the car emphasize its general distinctiveness.

Left Drive Center Control

The left hand drive, center control, gives the convenience of alighting direct onto the curb. It is unnecessary to face oncoming cars in stepping into the street when alighting.

Electrically Self-Cranking Electric Lighted

Our electric self-cranking system *spins* the motor. That ends a motor car fault, that of revolving the motor too slowly to secure combustion.

Electric lights and electric horn, of course.

Fully Equipped No Extras to Buy

Note some of the other costly features we include in this big car:

Rain-Vision Ventilating Windshield
Electric Horn
36 x 4 Tires, Demountable Rims
Full Floating Rear Axle
Cowl Dash
Turkish Type Upholstery—Finest of Leathers
Wide Doors (with Concealed Hinges) as on 1914 European Cars
Dustproof En Bloc T Head Motor
Extra Roomy Tonneau—29 Inches Foot Room
Tire Irons with Extra Demountable Rim

This is the Auburn Automobile Company's 14th successful year manufacturing automobiles—they have never created an unsuccessful model. And in considering the New Auburn "40" please bear this in mind: *One of the highest commercial ratings given by the two recognized mercantile agencies is given the AUBURN AUTOMOBILE CO.*

Let that govern your respect for this wonderful product.

Now on Exhibit

Come see these two cars at our showrooms. The visit will show you the startling motor car value of 1914. Then gauge all cars you are considering by this new standard of value.

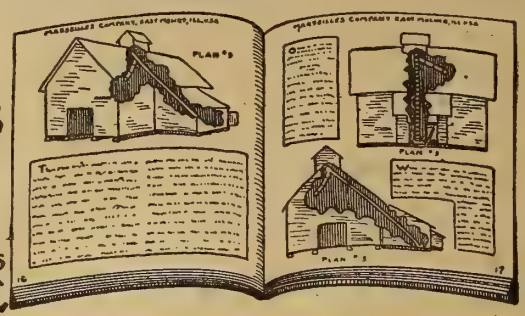
Models: "40"—5-passenger, $1490; 6-passenger, $1590 (fully equipped).

Come at once, while their newness is an attraction to you.

AUBURN AUTOMOBILE COMPANY,
Auburn, Indiana

HOW TO BUILD CORN CRIBS

And Granaries, With Blue Print Plans And Cost Estimates **BOOK FREE**



Save the price of a John Deere—The Sagless Elevator by the way you build your corn cribs. This book tells you how to do it. It has ten blue print plans covering the construction of corn cribs and granaries, showing the style of elevator to use with each one. It contains cost estimates for the various cribs and granaries, and furnishes a source of valuable information for the farmer. The John Deere—The Sagless Elevator is also fully illustrated and described. You will profit by reading this book and you can get it free. See below "How to Get Book."

John Deere—The Sagless Elevator

You Can Now Get a Sagless Steel Elevator

John Deere—The Sagless Elevator, is the first portable steel elevator to have turnbuckles on the truss rods so that you can keep the elevator from sagging.

You know how the power required increases when an elevator once starts to sag. Likewise you know what a strain sagging throws on the whole elevator, especially the bearings in the head and boot sections.

The John Deere, for the sagless feature alone—even if it didn't have all those other things of advantage—is worth your careful consideration.

The Sagless Feature

Four turnbuckles on the truss rods, together with extra strong section connections make the John Deere a sagless elevator. Sections are triple-lapped, connected with fourteen bolts, banded with heavy iron bands and reinforced at the upper edge on the inside. That is one big advantage in having a John Deere—The Sagless Elevator.

You Get Many Other

desirable features on John Deere Elevators. These are illustrated and discussed in the John Deere—The Sagless Elevator book. (This book also illustrates and describes the John Deere Cypress Wood Elevator and the John Deere Tubular Steel Elevator for small grain —the only one of its kind.)

SHERWIN-WILLIAMS PAINTS & VARNISHES

Painting today saves rebuilding tomorrow. You can buy a lot of paint for the cost of a new barn. Isn't it good judgment to keep the old barn from ruin by investing in a little paint occasionally?

Sherwin-Williams Creosote Paint

will preserve every rough-lumber building around your farm. It is well known that creosote, the especially noteworthy substance in this paint, will prevent decay. It sinks into the wood and lends wonderful added strength to the life of the wood. Use it on barns, corn cribs, fences, out-buildings and shingle roofs. It spreads well under the brush and wears long and hard. Its low cost will surprise you. This is only one of the great family of paints, stains and varnishes described in our booklet, "Paints and Varnishes for the Farm." You need this practical, really helpful book whether you want to repaint your barn or merely brighten up a chair or table. We send it free.

The Sherwin-Williams Company **683 Canal Road, Cleveland, O.**

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LAW QUESTIONS CONSIDERED

STRAW ON RENTED FARM—COLLECTION.

A Subscriber, Lime Springs, Iowa.—(1) A rented B's farm on shares, each to have one-half, except, horses and machinery, the straw to be stacked in the yard. This arrangement continued for five years and then B sold the farm to C, and A rented it for another year on the same terms. Then A bought C's half interest, and rented the farm for cash rent. The contract stating that the straw should be stacked in the yard. To whom does this straw rightfully belong? (2) A certain firm advertised a certain medicine to heal all sores and hoofs of horses, offering to send trial box with guarantee that horses would be benefited or money refunded. I sent for a box, and requested firm to also send box to my neighbor, and two boxes were sent to each of us. My neighbor did not try the stuff, but I did try one box, and it was not satisfactory, so I sent three boxes back. The transportation charge was $1.05 and the firm now writes my neighbor claiming $1.00 for the box not returned, and threatens to collect the amount by law. Can it do so?

Answer.—(1) As the farm was rented by A for cash rent, the straw belongs to him. (2) The firm cannot collect the dollar from your neighbor by law.

LICENSE TO BUILD DAM.

A Subscriber, Maquoketa, Iowa.—(1) Can a company or corporation lawfully dam any of the rivers of Iowa, without first obtaining a license or charter from the state? (2) Can a company dam a river in Iowa, without first compensating the contiguous landowners for damage to be done to their lands by reason of overflow, or interference with the drainage of the lands?

Answer.—(1) It cannot. The license is obtained from the district court, in the following manner: A person or company wishing to erect a dam across a river must file in the office of the clerk of the district court a petition therefor, describing the locality, and the dam to be erected, and the lands that will be overflowed or otherwise affected by such dam, designating the owners thereof as defendants in the petition. The clerk will then issue an order directing the sheriff to summon a jury to meet on the lands at a day fixed in such order, which order will be served on the landowners. On the day fixed the jury will be sworn and view the premises and appraise the damages to each defendant, and report same to sheriff, and report will be filed in clerk's office, and come up for hearing at next term of court, and if approved, a license will be issued upon the payment to defendants of the damages allowed. The second question is answered in the above.

SUIT FOR MONEY—AUTO TOP.

A Subscriber, Spencer, Iowa.—About a month ago I sent to an auto firm for an auto top, giving the exact dimensions of my auto. The firm sent me a top too small and without any side curtains, although it had advertised auto tops complete with side curtains, and also that goods sold which were not as represented could be returned to them for credit. I returned the top, advising the firm of the mistake, and asking it to send me another. The firm has not done so, and has not even acknowledged the receipt of my letter. Can I compel it to furnish the top or return my money?

Answer.—If the firm does not furnish you with a top such as you ordered, you can sue it for the money and recover judgment for the amount. Such suit would probably have to be brought where the firm does business.

ESTATE.—PARTITION PROCEEDINGS.

A Subscriber, Peterson, Iowa.—An estate came into the possession of mother and three children, and they cannot agree as to the settlement of it. (1) Can two of the heirs appoint an agent to care for it against the consent of the others? (2) Can two of the heirs have the property sold contrary to the wishes of the others who want it divided? (3) How can the matter be settled in court, and what would the costs amount to? (4) Would such costs be charged up to the estate?

Answer.—(1) All the heirs must agree in the appointment of an agent, in order to give him complete power to control and care for the property. (2) Any heir may apply to the district court by petition to have partition made of the property, and the court will make a decree for a division of the same, and appoint commissioners to divide it, and if they find division cannot be made in a just and equitable manner, the court will order a sale, and the proceeds divided, and the costs of such proceeding will be charged to the estate, each heir to pay according to his interest in it. This answers the third question.

FARMING ON SHARES—TENANT'S RIGHTS.

A Suscriber, Laporte City, Iowa.—B rented a farm from A on shares, agreeing to give as rent two-fifths of the corn, one-third of the small grain, and one-third of the hay in stack or threshed. On the land there is a piece of clover and timothy, the first crop now being in stack, and there are prospects of a second crop. (1) Is A entitled to one-third of this second crop for hay or seed, and has B the right to pasture it if not cut? (2) Who is entitled to the straw and stalks.

Answer.—(1) A is entitled to one-third of said second crop, and B has no right to pasture it, if not cut. (2) B is entitled to the straw and stalks.

DEEDS AND WILLS.

A Subscriber, Cedar Rapids, Iowa.—In answer to an Iowa subscriber, in the Homestead, of January 23, 1913, you advise the making of a will in preference to a deed which is not to be delivered or recorded till after the death of the grantor. Will you please explain why you advise this course?

Answer.—Recording is not essential to the validity of a deed, as between the parties themselves, but delivery is always necessary. Delivery of a deed after the death of a grantor is not sufficient to vest title in the grantee. It is true, however, that a deed may be made to a grantee, and the deed delivered to a third person to be held by him till the death of the grantor, and then delivered to the grantee, and it will be valid, but the delivery of the deed by the grantor to such third person must be made without any power in the grantor to withdraw it; that is, such delivery must be irrevocable by the grantor. Because the principles of law applicable to delivery are not well understood by people generally, it is perhaps safer for persons not learned in the law to make a will, rather than a deed to take effect at death.

HOMESTEAD.—RESIDENCE.

Mr. P. E. Fitzgerald, Kearney, Neb.—(1) When a single man enters a homestead claim in Nebraska, how often must he sleep on the claim, and how long at a time? (2) What improvements must he make on the claim? (3) Could a person who lacks three months of being twenty-one years old take up a homestead without danger of losing it when he was ready to prove up?

Answer.—(1) The homestead law does not provide for a homesteader sleeping on his claim at all. It provides that he shall reside on it, and cultivate it for three years in good faith, and not merely sleep there occasionally. He is required to make the claim his home until he proves up. If he will notify the register of the land office of the beginning of absence from the claim, the law allows him to be absent therefrom not exceeding five months each year. (2) On an ordinary homstead claim, he must prove that he has resided on and cultivated it in a reasonable manner to the satisfaction of the officers of the land office. (3) He cannot. The law requires a person to be twenty-one years old, before entering a homestead claim.

TERMS OF STALLION SERVICE.

A Subscriber, Cedar Falls, Iowa.—A bred a mare to B's stallion, and B guaranteed the colt to be foaled alive, and to stand and suck or no pay. Before foaling time, A sold the mare to C, and the colt was foaled dead. When C bought the mare he promised A to pay the stallion service fee, but as the colt was dead, he refused to do so. Can B recover the service fee by law, from either A or C?

Answer.—He cannot. C is not liable to B for the service fee, because there was never any contract between C and B about the breeding. If B should sue A for the fee, B would have to prove that the colt was born alive, and stood and sucked, and this he could not do.

The Saddle Horse and His Training

The Ideal Saddle Horse—His Breeding and Typical Conformation—The Educational Methods Employed in His Training.

HUMANITY has shown no instance of appreciation of animal friends greater than that enjoyed by the well-trained saddle horse. In their associations with man no other animals have shown a capacity to enter into the same harmony of action, quick appreciation of intent, and intelligent interpretation of guiding hint as the horse, and none has acknowledged man's mastership with the same eager willingness.

The saddle horse stands as the highest example of equine intelligence. His capacity for absorbing knowledge is extraordinary, and his retention of lessons taught him borders closely upon the powers of human intelligence. The saddle horse is an animal of American production, originally the outgrowth of pioneer conditions, and later developed and perfected to a high degree because of the appreciation of those to whom equestrianism was a joy and health-giving exercise. The means of earlier American transportation, before the introduction of steam, were confined to the stage coach and the saddle horse. Naturally those who traveled much took pains to select as saddle animals those horses which were best adapted to that work. The demand was for a horse of a type radically different from that of the draft horse, and having little in common with the conformation of the coach horse of that day. So the selections came largely from thoroughbreds that showed a tendency toward easy gait and nimbleness of foot. With this as a beginning the growth of the saddle horse into a distinct class was dependent upon processes of selection and elimination. With neither combined effort or common type in view, it was necessarily a matter of slow progress and it was not until 1891 that a final effort succeeded in the formation of an organization, the object of which was to formulate ideals and attempt to perpetuate them as a distinct breed. The foundation blood recognized by that organization was in the majority thoroughbred, with some considerable dash of Morgan, and some of unknown ancestry. Continued use of meritorious line of breeding has resulted in the establishment of strains of more firmly fixed characteristics and greater prepotency and productiveness of the traits that go to make the ideal saddle horse. It is conceded that the most influential factor in the formation of saddle horse requirements was the stallion Denmark, a son of an imported thoroughbred. Denmark was in service in Kentucky, and the more notable saddle horses trace to that origin. The states of Kentucky, Missouri, Virginia and Tennessee lead in the production of these horses, and with other southern states constitute the field in which the saddler enjoys his greatest popularity.

A HIGH TYPE OF AMERICAN SADDLE HORSE.

The principal feature of the saddle-horse requirement is that he be a "good looker"—have well-balanced and symmetrical proportions, and attractive action. In the make-up of the saddler, size is given no official consideration; that is the rules of the American Saddle Horse Breeders' Association do not set any standard on that point. However the popular demand is for a horse of about fifteen hands two inches in height and weighing from 950 to 1,050 pounds. As a general description of the saddler it may be said that he should have a short, strong back, long and sloping shoulders, strong and springy pasterns, a round, well-turned body, a good head with keen eye showing intelligence and life, a good foot and high carriage of head and arched neck.

More than all the points of conformation is the consideration given to gaits. There is the three-gaited horse and the five-gaited one. The three-gaited horse has the natural gaits—walk, trot and gallop. The five-gaited horse has in addition two artificial gaits—running walk and rack. The running walk is an easy one for the rider, while the rack is a very showy gait.

The advancement in the saddle horse has been largely in the direction of securing an easy-riding animal.

The five-gaited horse is the highest attainment, although what is known as "high school" training gives additional value. This training includes kneeling, lying down, and kindred tricks for show-ring entertainment. A scale of 100 points established for judging saddle horses is divided as follows: Conformation twenty-five points, style fifteen points, action ten points, walk ten points, trot ten points, canter (or gallop) ten points, rack (or single-foot) ten points, slow gaits (running walk, stepping pace or fox trot) ten points.

The training of the horse is a matter of patient effort. No two horses respond in the same manner to the same treatment. There is no recognized manual of instruction. The individual ideas of each trainer serve as his own guide. While kindness and patience are the main elements in training, it must be admitted that some of the methods employed are at times a close approach to refined cruelty.

At present there seems to be a growing interest in and demand for the gaited saddler. Some large establishments are devoted to their production and training. While the partiality for horses of pure breeding is strong, some excellent saddlers are the result of crossing the saddler sire with trotting or pacing-bred dams.

The illustrations herewith presented are made from photographs taken on the farm of Hamilton Brothers, Keokuk county, Iowa. These gentlemen became interested in the saddle horse about fifteen years ago, and have gradually increased that interest until today their concern is the largest of the character in that state. The breeding of saddle horses may be looked upon rather as a matter of pride than profit. The original cost of the horse is no small matter, as it involves a knowledge of blood lines and crosses that are not employed in any other branch of horse growing. Added to this is the expense of training and constant practice up to the time of sale. Some horses, once trained, do not forget their education. Others do, so that all are the better of constant practice. Prices of gaited saddlers vary with the personal taste of the buyer. They may be said to range from $250 to $2,000.

Tire Cost Cut Four Ways

We claim your favor on No-Rim-Cut tires solely on the ground of saving.

We cut tire bills in four ways which no one else employs. That's how we won the world's largest tire business. And that's how we are going to win you.

Way One—In these tires we end rim-cutting—make it impossible. We do this in the only feasible way—a way which we control.

With old-type tires—clincher tires—rim-cutting ruins almost one tire in three. That is shown by most careful statistics.

Way Two—We add to our tire cost $1,500 daily to final-cure these tires on air. That is done to save countless blow-outs.

No other tire maker does this, because of the extra expense.

Way Three—We alone use a patent method to prevent tread separation. We paid $50,000 for it.

This way reduces by sixty per cent the danger of loose treads.

Way Four—We limit our profit to 8½ per cent. By matchless output and modern equipment we have brought tire cost to minimum.

As a result, these costly tires—No-Rim-Cut tires—now cost you no more than other standard tires. They used to cost one-fifth more.

So you get all these savings, which cost us fortunes, at no extra price. Do you think it wise, under these conditions, to go without them all.

Go see these tires—now the rulers of Tiredom. Our dealers are everywhere.

HINTS-SUGGESTIONS-DEVICES

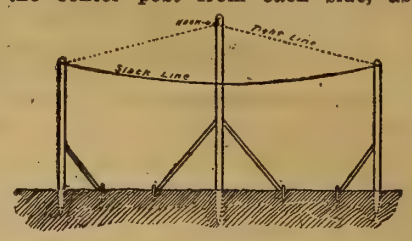
AND CONDENSED LETTERS FROM CORRESPONDENTS

WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm or something that is connected with the home.

A HELP IN HANGING OUT CLOTHES.

The accompanying illustration shows how the housewife may hang out her clothes on washday easier, and at the same time guard against the line sagging down and dragging the clean clothes in the dirt.

Set three posts for the clothesline, leaving the center one, two or three feet longer than the end posts. Brace the center post from each side, as

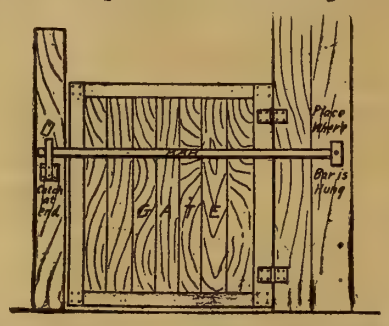


there is a double strain on it. Fasten the line securely at each end, but leave it free at the center post.

This leaves the line at a convenient height for hanging out the clothes, when one can take a forked stick or a light board with a notch in the end, and lift both clothes and line to the top of the center post, as shown by dotted line. A screw hook, obtainable at any hardware store, is best for hanging the line on; although a large nail, or a sharp notch in the post, will serve the same purpose.

A Door or Gate Fastener.

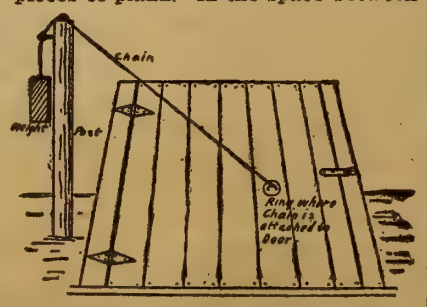
The bar shown in the accompanying illustration is made from 2x4 plank. A hole is bored in one end—after the plank is cut the desired length—and a bolt is put through this hole and then through the post or planking from which the gate or door is swung. To



hold the bar on the other side a catch must be made. Nail on a piece of strong board which will extend upwards six inches. The bar drops in this and is securely held. This fastener will hold almost any kind of live stock.

A Cellar Door Hanger.

To make cellar doors open easier a post should be very firmly located near the side where the door is attached to the frame with hinges. On top (on either side) of this post nail two short pieces of plank. In the space between



the planks a pulley wheel should be suspended on a strong bolt. Attach a chain to the cellar door with a ring and staple, running this over the pulley wheel and at the other end attach a weight which is just heavy enough to balance the door. The door can now be opened and shut with ease.

AN EXCELLENT CORN BOOK.

Under the title, "The Corn Crops," an up-to-date volume has just come from the pen of Prof. E. G. Montgomery, one of the most painstaking and sensible agronomists in the United States. A comprehensive idea of the contents of this volume may be obtained from a perusal of the following chapter subjects: Production and Distribution of Indian Corn; Origin and Classification; Description of the Corn Plant; Physiology of Corn; Relation of Climatic Factors to Growth; Relation of Soils to Growth; Early Culture; Improvement of Varieties; Methods of Laying out a Breeding Plat; Results with Hybridization; Acclimation and Yield; Cropping System in Relation to Maintaining the Yield of Corn; Organic Matter; Mineral Matter; Regulating the Water Supply; Preparation and Planting; The Principles of Interculture; Animal and Insect Enemies; Harvesting the Corn Crop; Uses of Corn; Show Corn; Sweet Corn or Sugar Corn; The Sorghum Plant; The Saccharine Sorghums; The Nonsaccharine Sorghums; Cultural Methods for Sorghums; Utilizing the Sorghum Crop; Sorghum for Syrup-making; Broom corn.

This paper feels that the volume under consideration cannot be too strongly endorsed. It deals with the most important crop grown in the United States and the subject from the first to last is discussed in a manner to fit the needs of the practical farmer as well as the student. The volume sells at $1.60 and arrangements have been made by which this paper can furnish it to its readers at the regular publisher's price.

Tower's Fish Brand Reflex Slicker

JUST THE COAT FOR DRIVING WHEN IT RAINS

Face any storm in it and you'll return "Dry as a bone". No water can reach you even through the openings between the buttons—that's where our famous Reflex Edges protect you by keeping out every drop.

FARMING FOR FERTILITY AND PROFIT.

(Continued from page 9.)

this "show-me" state farm hinges around the fact that a home market that pays top prices is created right on the farm through the medium of feeding all the crops and hay to the beeves, porkers and breeding animals and subsequently selling these more valuable concentrated products on the market. Dual utility is gained from the crops—they are marketed at the reigning prices, as the animals are charged with all the food which they consume while added fertility accrues to the farm through the home feeding of these crops in addition to purchased concentrates. Wheat is sold as a cash crop, a portion of the resultant funds being used to purchase bran and oil meal. In this exchange the farm again gains in fertility.

A portion of the sorghum crop is cut and shocked in the field. Then it is fed during the early winter to the cattle instead of hay. It must not be left in the shock too long, as it tends to heat and ferment. To a certain extent Mr. Emmons is an advocate of the "survival of the fittest" as applied to the raising of Short-horn cattle. He is thoroughly opposed to pampering the animals by overfeeding or excessive housing. He says that the cattle should run out-of-doors all the time and that only the cows and their calves should be housed during bad weather. "Liberal feeding, the opportunity to range and rustle on pasture and meadow, access to fresh water, salt and an open-end shed that is well bedded with clean straw spell contentment and happiness to the rugged Short-horns whose forebears formerly roamed the hills of Scotland," said Mr. Emmons to the writer during a recent conversation. "Cattle on pasture are easily kept up to appetite while their prolificacy and fecundity are immeasurably benefited by the healthy exercise that they get in rustling a portion of their food. Dams handled in this way bear robust, vigorous calves that are economical feeders and rapid maturers."

The winter feed of the Emmons Short-horns comprises combination silage and clover and timothy hay fed in troughs and racks out in the yards. The cows and calves receive a similar ration in the barn. The calves are given a little supplementary oil meal and crushed corn. Supplementary grain is also supplied to the cows or the pastured stock as they indicate that they need it. By running the entire ear of corn through the cutting box and then sprinkling oil meal over the resultant corn-and-cob meal Mr. Emmons provides a delicacy that is highly relished by the cattle, young and old. Oats are also judiciously used in the menu, corn and oats being the basis of the most valuable grain ration which is fed with silage and clover hay for roughage.

Formerly Mr. Emmons was an extensive feeder of steers. He produced beef by the grass-corn-cotton-seed formula. He liked grade two or three-year-olds that weighed about 1,000 pounds for his feeding operations. Ordinarily he made a practice of buying the feeders in September so that he could rough them on blue grass and cornstalk fields until the latter part of January. In this way he reduced care and labor to a minimum, the animals rustling all of their feed. During this period a good steer would take on about one hundred and fifty pounds of gain. Then the beeves would be moved to the dry lot where as soon as possible they would be placed on a full feed of corn and cottonseed meal. As early as blue grass was available in the spring the near-fat steers were turned out on grass, receiving supplementary snapped corn.

Both in the feed lot and on pasturage swine in the proportion of one and one-half hogs per steer followed the beeves in order to utilize the waste. The pork produced by this system was practically clear profit as no extra feed and little care or labor were involved in the fattening of the porkers. About the latter part of July or the fore part of August the beeves would be in full market bloom. The steers would be marketed right off the grass. An average steer would put on about 400 pounds of gain in five months, according to this system of management, eighty pounds of gain per month being easily possible where the animals were liberally fed on corn, cottonseed, clover and blue grass. Twenty years ago Mr. Emmons used to be able to sell a fat steer for more than double what he paid for the animal. Under such conditions his net profit per animal ranged from $25 to $40. Where intelligently practiced, beef feeding affords one of the most profitable and easiest lines of business. It is less confining than the dairy business, while it yields just as good returns. The successful feeder must be able to select the right type of cattle that will make economical and rapid gains in the dry lot; he must buy right and sell right; he must raise the majority of what he feeds and he must keep in constant touch with market requirements and the condition of the trade.

The swine population on the Emmons farm numbers about 100 hogs. Two crops of pigs a year are raised, the average sow raising fifteen pigs a year. For several years seven sows in the herd have raised from 100 to 120 pigs per year. The swine are handled under the colony system, the same idea being followed, as in the case of the cattle, to run the hogs out-of-doors as much as possible. The sows are vigorous and active under this method and farrow healthy, strong pigs. During a recent year Mr. Emmons topped the St. Louis market with a car load of fat hogs that sold for $1,500. Under his direction a tenant raised and fattened seventy-eight head of swine that brought ten cents a pound on the market or a gross sum of $2,200. A net profit of $1,000 resulted from the fattening of this top quality lot of hogs.

The Long Branch Farm is of rolling topography. The land is ideal for grazing purposes and is worth about $60 an acre. The soil is a fertile loam that is underlaid with clay which holds barn-yard manure so that its beneficial effects are felt for a long time. About one-half of the farm is composed of virgin blue grass that has never been broken. In consequence of the liberal use of manure and the feeding of sufficient live stock an increase of 30 per cent in the crop yields has resulted during the last decade. The blue grass re-seeds itself and is a prolific provider of excellent grazing for cattle and hogs.

The farm buildings at Long Branch are designed for service and utility for twelve months in the year. They are plain and simple yet an air of homeliness and neatness pervades the farmstead that is rarely met with on many more pretentious places. The buildings are kept in good repair and paint while no such eye-sores as dilapidated fences and neglected barn-yards are apparent. An efficient farm shop and machinery shed is a valuable part of the equipment while the barns are comfortable and commodious. Two silos provide adequate storage for the succulent ensilage. Like his farm Mr. Emmons is a man typed for service. He is a practical farmer who thoroughly appreciates the value of science as applied to farm conditions. He is a stanch advocate of the agricultural college and believes that a scientific agricultural training is one of the most essential needs of every farm boy. Mr. Emmons favors the work of the college in its endeavors to help the farmers to grow better crops, to raise better live stock, to minimize loss and to increase the profits of their operations. During farmers' week Mr. Emmons is always a visitor to the state college where annually he learns something new about farms and farming.

A method of producing potassium fertilizer by treating in the electric furnace feldspar or other minerals containing potassium, with a suitable proportion of carbon and iron, has been invented by a Swedish electrochemist.

King Wonder, a son of old A Wonder and out of the great sow, Mammoth Giantess, at the head of the J. M. Sheehan herd, Stuart, Iowa. See field note on page 31.

Cash or Easy Terms

Let me send you an engine to earn its own cost, working for you, as you take time to pay for it. I make no extra charge for Easy Terms.

No need now to pay a double price for a good engine, or to take a poor, or doubtful one for any price. Every WITTE goes out under

60 Days Free Trial

5-Year Guarantee

I don't consider any sale closed until the engine has made good—sold itself under actual test in the user's hands. Under my New Plan, you are sure of knowing what any engine ought to do, besides knowing what my engine can do, before you finally decide to buy. My factory is one of three of the first ones in America, making successful gasoline and kerosene engines. For 27 years the WITTE has always proved itself reliable—easy to understand and run—steady power, and small fuel consumption. No gas or oil engine can out-last the WITTE, and very, very few, of them can work on so little fuel.

Let me show you how you can make good money out of a WITTE Engine, right on your place.

WITTE ENGINES

Kerosene, Gasoline & Gas

Made in sizes, 1½, 2, 4, 6, 8, 11, 12, 15, 20, 25, 30 and 40 H-P. Stationary, Skidded, Mounted, and Sawrig Styles.

Sold only Direct from Factory to User at Strictly Factory Prices, saving to Users ¼ to ½ usual prices.

WITTE How to Judge Engines and pick the Winner

SEND TO-DAY FOR THIS FREE BOOK

My New Book tells the inside of engine selling, as well as manufacturing. It gives my "Live and Let Live" prices, and shows how you can buy on any reasonable terms to make you safe and satisfied. Write me, to-day.

This Check Mark Protects You

Our trade mark stamped on the head of every "Capewell" nail. Accept no substitute.

If you shod your horses

You would choose nails which hold and drive best, mar the hoof least, and enable the horse to work most comfortably and efficiently.

Because others do the shoeing don't permit the use of "any old" nail. Insist upon "The Capewell" brand.

"Capewell" points cut through a hoof easily. The blades are tough, and stiff enough not to crimp or split under the smith's hammer. They hold a shoe tight, thus giving the horse a firm footing.

Best nail in the world at a fair price—not the cheapest regardless of quality. Any shoer can afford them.

The Capewell Horse Nail Co.

Dept. A, Hartford, Conn.

Largest Makers of Horse Nails in the World

AGENTS SOMETHING NEW

Selling the newly patented Brandt Cigar Lighter. Is operated with one hand; gives an instantaneous light every time the button is pressed. No electricity, no battery, no wires, non-explosive. Strikes a light without the aid of matches. Lights your pipe, cigar, cigarette, gas jet, whenever and wherever wanted. Works with one hand and never fails. Something new. Big demand. Everyone wants one. Write quick for wholesale terms and prices. O. K. Brandt Mfg. Co., 142 Duane St., N. Y. City.

COAL Direct From The Mines

Keep Dealer's and Jobber's Profits In YOUR Pocket

DO you know that wherever you live *you* can now buy coal straight from the mines at wholesale prices, the prices your *dealer* has to pay?

Do you know that this winter you can save from $50 to $100 on your coal supply—have it delivered promptly—the cleanest, best heat-producing coal you ever used?

It is literally throwing your money away and adding to the high cost of living *with a vengeance* to continue to pay local prices for coal.

Our great mines near Vincennes, Indiana, produce enormous quantities of the finest coal in the country—the coal that is famous for its remarkable heat unit efficiency. We ship everywhere direct from mines in carload lots this splendid guaranteed fuel.

Tecumseh Coal

Save $50 to $100

on your winter's coal supply. We know that seems too good to be true, but it is an absolute fact that hundreds of people far and near are already buying Tecumseh Coal from us at wholesale and making this marvelous saving.

Not only is Tecumseh the best heat giving coal—but it is *all coal*—cleaned at the mines by the most perfect system ever installed.

No matter how big your coal bills have been in the past—no matter how much you have fattened the jobber's and dealer's profits—the time to turn your back on the old costly round-about way of buying is now. Begin with *this* winter to make this real saving.

It is plain common sense for you to save money by dealing *direct with the mines.* You owe it to yourself to find out the facts and prices—to learn more about Tecumseh Coal. All we ask is the opportunity to quote you prices—to prove in actual figures the splendid saving you can make.

This should interest you whether or not you intend to buy a full car of coal.

Club with Your Neighbors

If you cannot use a whole car—25 to 40 tons—you can easily arrange with your neighbors to divide up the shipment and still make this handsome saving on your winter's coal.

This money-saving plan is too important to be set aside. The amount of waste money you have been paying your dealer belongs in your own pocket. Keep it there. Right now take the first step. It obligates you to nothing. Just fill out and mail us the coupon in this advertisement. The prices we quote will positively surprise you. But do it now before the matter slips your mind. Address

Sioux City Interstate Fair

EXCELLENT weather prevailed throughout the entire week of the Interstate live stock show held at Sioux City last week. As a consequence there was an unusually large attendance and the management had nothing to complain of on that score. Heretofore the horse racing has drawn the large share of the crowd. This year the racing was more or less in the background and the general entertainments on the ground were patronized to the limit. It was a better humored attendance than ever before. As usual the city provided an evening entertainment under the name of the "Sioux Trail" on the streets, and it was to the credit of Sioux City people that it lacked the viciousness which has characterized it in the past.

As a fair there was little, either in extent or interest, aside from the live stock show. That was great and brought together a splendid collection of high-class animals of most of the different breeds. In this respect it outclassed several of the state fairs. Hogs and beef cattle made up the aggregation. This was in keeping with the territory represented, as the products of the country adjacent to Sioux City are and must be beef and pork.

The department of agricultural products was an inglorious fizzle. Some of the shelves were bare. Others contained a half-hearted effort that failed to be representative even of an average farm. There was a limited showing of pretty good corn, a liberal collection of potatoes, and an abundant collection of apples. One of the foreneeded. It must be a forceful factor in promoting health and a knowledge of bodily perfections. It promises to be valuable as a means of giving proper attention to the care of minor defects, which, if rightly attended to, may be eradicated, or so reduced as to become unnoticeable. It is a good work.

BEEF CATTLE

Confidence in the return of prosperous conditions in the cattle business was more clearly indicated by the exhibit at this shown than at any fair of the season held up to this time. Shorthorns in particular blossomed out in such numbers as to crowd the capacity of the show to take care of them. The leading show herds were present, as well as some newer candidates for show honors that have not before entered the arena. Nearly all classes were well filled, and some of them showed a real old-time excellence of both numbers and quality. The breed really dominated the show in the interest manifested by the public. The pavilion was comfortably filled during the show. The herds of Herefords and Aberdeen Angus were those that have been making the state fair circuit. Galloways were not represented at all. Dairy breeds were in the minority as to numbers, the Holstein-Friesians alone being represented.

SHORT-HORNS.

The exhibitors: L. C. Oloff, Ireton, Iowa; Farmer Farm, Farmington, Minn.; C. A. Saunders & Sons, Manilla, Iowa; McMillan & Sons, Rock Rapids, Iowa; Andrew E. Lee, Centerville, S. D.; F. E. Junior Yearling Heifer (10 shown)—

LINING UP AROUND THE TRACK.

eign advertising exhibits, however, outranked the whole show in magnitude and variety of grains, grasses and vegetables. The fruit show indicated that apple growers have not yet turned their attention to the growing of valuable commercial varieties, but that they are still following the family orchard plan.

In the poultry division there was an evident lack of interest. Some excellent birds were shown, but the competition lacked the vim that goes with a real poultry show. Scarcely half the pen space was utilized, and even a portion of that used was occupied by dogs that were offered for sale. A separate and disconnected display of pheasants and game birds with which it is proposed to stock the country attracted greater attention.

The popular baby show had its innings here as elsewhere, and attracted the maximum of attention. There were numerous entries in the competitions for better babies, but up to the time of closing of the show the awards had not been announced. This exhibit had perhaps a greater educational value than was possessed by any other on the grounds. It has the effect of awakening interest in the care of children that has been badly

The best paint for your house

Paint-making is more than mixing some pigments and liquid with a paddle. This explains why you can give best protection to your house if you use scientifically prepared paint.

Real paint—the kind you want—is made scientifically, in a way that calls for expert paint-makers, scientific selection of materials, accurate proportions, immense grinding and mixing machinery and other factory equipment. No hand-mixed paint can begin to compare with

Lowe Brothers High Standard LIQUID-PAINT

Careful tests have shown that good wearing and protecting qualities of paint depend upon the fineness of the grinding as well as upon the accurate proportions of the materials, and their high quality. "High Standard" is made of the choicest materials and in the exact proportion that years of exposure tests have proved to give best results. No one can approach this in home-made paint.

For interior walls and ceilings use **Lowe Brothers Mellotone**—the beautiful finish that is washable, fadeless and does not easily scratch or mar. Adapted to every room in the house.

Have the best looking house in *your neighborhood*. Ask your local "High Standard" dealer-agent to give you paint information and color combinations for exteriors, interior walls, floors, woodwork, etc.

Valuable Books—Free Experts have prepared some valuable books—"*Homes Attractive from Gate to Garret*," and "*Mellotone Your Walls*." These with special color cards showing how to secure good results with your barns, implements, vehicles, etc., sent *free* upon request. Write today.

FRENCH DRAFT.

Peter Moir, Orange City, Iowa, made the only exhibit of fifteen head and captured all prizes.

COACHERS.

Held Brothers, Hinton, Iowa, were exclusive exhibitors of this breed.

SWINE

While the turn out of the show was as large as the conditions of the season would justify, the merit of the animals shown was not up to the usual standard. There were 353 Duroc Jerseys, 237 Poland Chinas, 229 Chester Whites, 122 Hampshires, fifty-five Berkshires, and twenty-three Yorkshires—or 1,019 head in the entire show. The Chester Whites only showed an increase in numbers over the previous year, and really put up the better show from a breed standpoint. However, it is not a year for comparisons, as the prevalence of disease has reduced a great many herds and discouraged many others. The judges faced no outstanding animals, and each commented upon the lack of good feet in the younger classes of all breeds. The awards by breeds follow:

DUROC JERSEYS.

Cuts down your fuel bill—does better work

Here is a safe, reliable and economical kerosene farm engine. It is a practical success, because it is a *real* kerosene engine, not an ordinary gasoline engine that must be rigged up with a lot of fussy parts to operate on cheaper fuel.

"INGECO" Kerosene Engines

Run perfectly—saving you about half on ordinary lamp kerosene, distillates or other light oils. They are quick starters—easy runners—*safe*, as they have no exposed flame. They give you better work every way. Write for catalog, stating size needed.

HAMPSHIRES.

Exhibitors: R. J. Boles, Alta, Iowa; Roy E. Fisher, Winside, Neb.; H. C. Mehring, Manson, Iowa; Clayton Messenger, Keswick, Iowa; F O. Peterson, Galva, Iowa; W. F. Wiley, Bronson, Iowa. Judge—Wilson Rowe, Davenport, Iowa.

It was a rather better collection of Hampshires than has been gotten together at Sioux City at any previous fair, including 122 head, and among them some of the most successful winners at the state fairs of the season. The awards were placed as follows:

Boar 2 Years or Over (7 shown)—1st Messenger on Messenger Boy; 2d Fisher on Dr. Scott; 3d Mehring on John Eldon; 4th Fisher on Winside Star.

Boar 18 Months and Under 24 (4 shown)—1st Peterson on Peterson's

Montana

Go Now

At Harvest Time

See for yourself the giant crops Montana has produced this year—the largest in the history of the state. Meet the people and learn first hand of the splendid opportunities that await you there.

Montana is the greatest grain-producing state in the Union. Land costing less than one-third will produce twice the yields of Middle West and Eastern land.

There are also millions of acres of fertile Government Land that may be homesteaded.

Low round-trip homeseekers' tickets are on sale on the first and third Tuesdays of every month via the

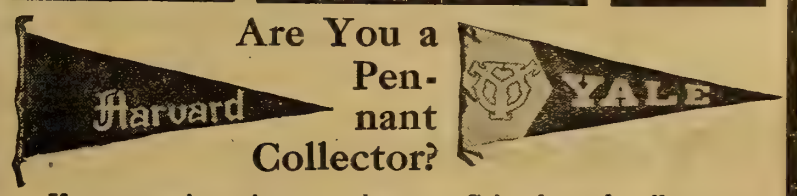
Chicago, Milwaukee & St. Paul Ry.

Books that contain a fund of information vitally important to the man seeking facts about Montana and its opportunities will be sent free on request to

GEO. B. HAYNES, General Passenger Agent

O. E. SHANER, Immigration Agent 750 Marquette Building CHICAGO

Three Pennants Free



Are You a Pennant Collector?

If you are, here is your chance. Schools and colleges are opening during this month and everyone wants pennants. To help supply the demand among my readers I have made arrangements with one of the largest factories in the country to supply me with pennants of twenty-one different states besides some of the leading colleges of the country.

These pennants are made of best felt and are fifteen inches wide and thirty-six inches long. The colors are warranted to be fast.

We can supply you with any of the following: Iowa, Nebraska, Illinois, Indiana, Ohio, Minnesota, Kansas, North Dakota, Colorado, Montana, Missouri, Oklahoma, Tennessee, Kentucky, Arkansas, Texas, Arizona, Wisconsin, Michigan, Wyoming, Harvard, Cornell, Yale, Princeton, Chicago.

How to Get the Pennants

Send me $1 for one year's subscription to The Homestead and I will send you prepaid free of charge any three pennants you may select from the above list.

This offer will be withdrawn October 1, 1913. Be sure to send the coupon below and address your orders to

Don't Be Disheartened By Hog Losses
Prevent Future Losses With
MERRY WAR POWDERED LYE

I know just how you farmers and hog raisers feel when you see a nice big bunch of fat hogs taken down sick, refusing to eat, getting thin and scrawny and slinking off into fence corners to lie down, stretch out and die. It's hard luck. It means the loss of hundreds—perhaps thousands of dollars to any one of you.

Now I want to tell you that there's no need for you to be discouraged—no need for you to repeat that disheartening experience **—no need for you to lose another hog on account of Cholera or Worms.** Just do what thousands of other practical farmers are doing every day—mix a little MERRY WAR POWDERED LYE with your hogs' rations (directions on every can) **and feed regularly twice each day.**

Fat, Healthy, Worm-Free Hogs

will be the result. It will put and keep your hogs on their feed—destroy every ill effect of hog worms—keep your hogs so healthy, strong and vigorous that, **even should cholera break out in your neighborhood, they'll be so conditioned as to resist it.** Thousands have **proved by experience** that MERRY WAR POWDERED LYE **is a safe preventive of hog cholera.**

Read This Convincing Proof

J. E. VAWTER, Beverly, Kans.—"25 hogs lost 1 mile east; 50 hogs lost 2 miles north; 20 hogs lost 2½ miles south of me, but I used MERRY WAR POWDERED LYE and escaped loss."

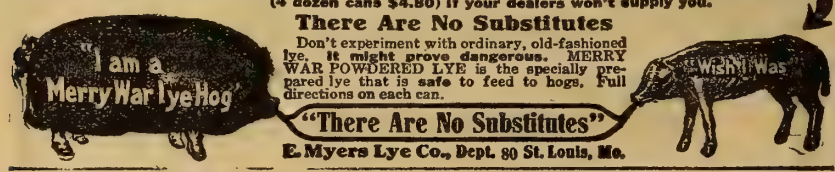
MRS. T. AKINS, Hoxie, Ark.—"MERRY WAR POWDERED LYE is all the Lye that we use. Before we began using it we had a lot of hogs with Cholera. We used it and it cured our hogs."

10c A Can At All Dealers

MERRY WAR POWDERED LYE is for sale at most grocers, druggists and feed dealers everywhere, 10c per can (**120 feeds**). It is convenient to buy in case lots—4 dozen cans $4.80. **Costs only 5c per hog, per month, to feed regularly**—by far the best and much the cheapest hog insurance you can buy. If your dealers can't supply you, write us, stating their names. We will see that you are supplied, and also send you, **free,** a valuable booklet "How To Get The Biggest Profits From Hog Raising." **Order direct from us in case lots (4 dozen cans $4.80) if your dealers won't supply you.**

There Are No Substitutes

Don't experiment with ordinary, old-fashioned lye, **it might prove dangerous.** MERRY WAR POWDERED LYE is the specially prepared lye that is **safe** to feed to hogs. Full directions on each can.



"There Are No Substitutes"

YORKSHIRES.

B. F. Kunkle, Redfield, Iowa, showed twenty-three head of this breed and was the only exhibitor.

SHEEP.

The sheep show was a somewhat limited one, made up of Shropshires, Oxfords, Leicesters and Southdowns. They were shown by J. C. Heideman, Montevideo, Minn.; C. F. Hood, Sioux City, Iowa; J. P. Ring, Excelsior, Minn.; C. H. Morris, Carroll, Neb., and H. G. Skinner, Brookings, S. D. Few classes had more than two entries, and the prizes were about evenly distributed.

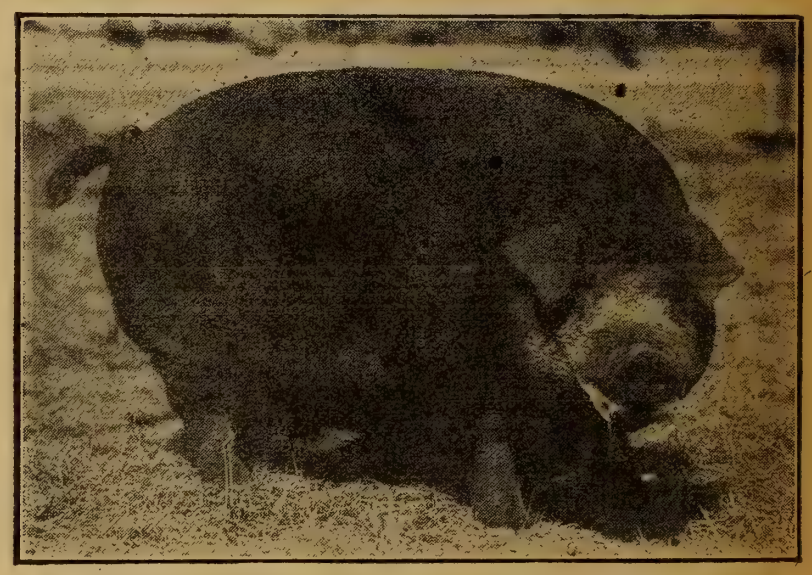
THE AMERICAN ROYAL LIVE STOCK SHOW.

Entries that have already been received by Secretary Wornall, of the American Royal Live Stock Show, indicate that records will be broken this year between the dates October 6th and 11th, this being the time of the American Royal. In the breeding and feeding beef cattle classes the prospect is exceedingly bright for a splendid showing and the same may be said of the horse and sheep departments.

The drouth will not affect the Royal in any way whatever, but on the other hand it is believed that conditions will tend to force farmers to take greater interest in improving live stock to the end that diversified farming may be popularized in the future.

Kansas City is the center of a very important territory agriculturally and as the American Royal constitutes the climax of the state fair season we would point out the natural advantage that will come to the average man from attending this show. Important sales will be held during the week, Aberdeen Angus being sold on October 7th; Short-horns on October 8th; Herefords on October 9th and Galloways on October 10th. These sales in themselves are educational and yet they are only supplementary to an exposition that has grown in the esteem of stockmen to that point where the ribbons are regarded as being second in importance to those distributed by no other exposition on the continent.

The reports from Kansas state that the county fairs are as successful this year as usual, notwithstanding the effects of the drouth of last summer. The crowds are just as big, the stock exhibits are fully up to the average, and the grain and fruit exhibits are surprising even the Kansans who had been led to believe that the crops were all ruined in that state.



GOLDEN MODEL 31ST.

Grand champion Duroc Jersey boar Sioux City, 1912, second at Lincoln, 1913, and fifth at Des Moines, 1913. A great sire and will sell in Waltemeyer Bros'. sale at Melbourne, Iowa, September 30th. See field note on page 30.

The Economy of Power Farming

The Largest Tractor Contest Ever Held in the United States Just Completed.—By Douglas Malcom.

EACH new step in the development of farming marks a new alliance between the producers in industry and the producers in agriculture. This interdependence was shown very clearly in the recent mammoth power farming demonstration which was held during the week ending September 13th at Fremont, Nebraska, under the auspices of the Fremont Commercial Men's Association. In a way this demonstration typified the new era which has cast its mantle over the commercial world. It shows in marked contrast the fast disappearing theory of caveat emptor—"let the buyer beware," with the present almost universally adopted slogan of "let the buyer be better posted."

So strongly has this underlying principle of business taken hold of the interests which deal directly with the farm industry that at the request of the Commercial Men's Association, backed by the influential agricultural press of Omaha, sixteen of the largest oil and gasoline tractor manufacturers, and as many more plow companies loaned the services of several hundred of their employes and the use of forty odd engines with even more plows for an entire week in order that an extensive object lesson might be given in cheaper crop production.

Farm machine demonstrations are not new things. In the early days when agriculture was just finding itself, when the reaper was a novelty and the threshing machine a curiosity, demonstrations were frequent and fierce. Later on, when more complicated machines became necessary, demonstrations became an almost essential feature of their introduction.

This is particularly so with engines and other devices designed for power farming. Perhaps the greatest impetus toward making power farming well known and popular was given by the International contests at Winnipeg, but these meets were more demonstrations of that type marked by keen rivalry and more or less commercialism, and oftentimes the interests of the purchaser were overlooked in the interests of the winner. The Fremont concourse, on the other hand, was purely educational. Big business was there, but without immediately trying to make business big.

It was a co-operative attempt by the state authorities, the agricultural press, and the tractor companies to demonstrate not only their particular machines, but their ability to work together as a unit in the promotion of better farming—an attempt, as it were, to write "quod est demonstrandum," on the modern trade mark in place of the shop-worn motto, "The buyer takes all risks." It was an attempt to show that on the farm, as in the store, it is not the price of a product which determines the profit, but the difference between what it costs and what it sells for.

With these three theories emanating from everyone interested in the affair, it naturally follows that the affair was interesting to everyone. The United States is rich in its agricultural resources. It is also extravagant in its agricultural methods. Too many land owners are willing to work without salaries and to keep horses incapable of meeting their board bills. In the region where this demonstration was held nature this season had been unkind. It had suffered so severely with the drouth that the only spots of green which the eye could see were here and there fields of that heaven-sent plant—alfalfa.

Fodder will be scarce this winter and horse feed will be high.

On this demonstration field were a dozen small outfits which could be bought for the price of six or seven horses, and they could easily do the work of from twelve to fifteen, whether the work consists of plowing, drilling, harvesting, hauling, logging, making roads, or baling hay. They can turn over an acre six to seven inches deep for from forty cents to fifty cents, and they can drill it for even less; they can haul the harvest in from the wheat field or the corn field with a speed which is rapidly solving the harvest-hand problem; they can handle the disks and drills in such a way as to turn out a seed bed that even the intensive European farmers would envy; they can, as a well-known agricultural college professor said, "perform every operation in wheat growing, from plowing to threshing and conveying it to the market, and every operation in corn growing but cultivating."

The difference between motor power and horse power is that when a tractor quits work its expense ends and when a horse quits work its expense begins. A hay famine has no terrors for the power farmer.

There was no work done at Fremont that would indicate that horses were a back number or that they should be eliminated entirely from the farm. That fate has overtaken them quickly enough in the cities. It was shown, however, that in all the branches of farm work where power and speed are essential, if we are to get our crops with less work and less time, there is a marked saving in using engines. This is seen not only in labor, and time, but in the saving of expense for fuel—in other words, if the time and labor-saving elements are not considered at all, it takes a greater cash value of oats to get a definite amount of work out of horseflesh than it does to get a similar amount of work out of an engine burning kerosene.

Among the prominent spectators who seemed to regret the close of each day's work, so interested were they in the features of each machine, was M. Deshmukh, a native Hindo from India, who is investigating power plowing in this country for the interests of the British government. India is one of the largest territories not yet penetrated by American farm machine companies. Various efforts have been made at different times to introduce the same labor-saving machines which American farmers use, but so cheap is labor in that country that a fairly able-bodied laborer can be hired for seven cents a day, thus eliminating a great deal of the economy brought about by using machines. The second spectator was a well-known Russian representative who is over in this country studying the possibilities of kerosene engines. Russia, itself, is one country in the world which produces more wheat than the United States. Millions of dollars of American-made farm machines are sold there each year, but the gasoline engine industry has not made much headway, owing to the high price of gasoline. Kerosene, on the other

Look Out for Hog Cholera!
